"I was a fool to goad her so: I shall never win her in that way. But I'll have her," he ex- claimed aloud. "By heaven, I'll have her, cost what it may!" Very different was the Fred Eckerson of the present, pacing nervously up and down the piazza, from the Fred Eckerson of a few moments ago receiving his dismissa from the woman he loved with such calm and imperturbable exterior, for he loved Becky Newton with all his heart. The real difficulty in the way, as he more than half suspected, was not so much with himself as in his pocket. Becky Newton had an insu perable objection to an empty wallet. The daughter of a wealthy Louisiana planter reard in luxury, and the recipient of weekly allowance of pin money sufficient the pay Fred's whole bills for a month, she had	not half believe him. Their clumsy vessel floated on, now root first, now sideways, and now half submerg- ed beneath the boiling current. Their pre- carious hold became more uncertain as their frames became chilled by the cold water, and every plunge of the log threat- ened to east them once more into the river. In vain Fred endeavored to attract the at- tention of some one on shore. The cotton- wood retained a course nearly in the mid- dle of the stream, too far from either bank to render their outcries of much avail. As it grew dark their situation seemed more and more hopeless, and to Becky there ap- peared to be no escape from certain death, either by drowning in the darkness or by exhaustion before daylight. Yet to die in this man's arms seemed not wholly a terror. She could hardly think, if death must come, of any other way in which she would rather meet it. Was it possible she loved him, and must needs be brought within the valley of the shadow	R. A. S., upon "Periodic Changes in the Magnetic Condition of the Earth and in the Distribution of Temperature on its Surface," in which he says: "It has long been sus- pected that the same causes which produce the spots on the sun's disk must in some way have an important influence on the phe- nomena of our own atmosphere. The facts now given convert this suspicion into a cer- tainty, and it is not perhaps too much to say that meteorology can never take rank as a true science while our knowledge of the sun remains in its present imperfect state." Other observers have come to the same conclusion. Steinmetz quotes from Mr. Fullbrook, the well-known writer on rain-fall and meteor- ology, as follows: "From extensive obser- vations he believes he has established the fact that whenever two planets form a right line with the earth, some disturbance con- nected with their light, electricity, or mag- netic reaction, takes place in the atmosphere, and a much larger owner the other sphere.	awhile in a labyrinth of perplexing and per- haps unprofitable argument.— <i>Boston Post.</i> Inhalation of Dust by Workmen. The injurious effect of exposure to the dust of various manufacturing establish- ments has not unfrequently been dwelt upon with more or less forces, but we are hardly prepared for the result of certain specific investigations on this subject. It has long been a disputed point whether the particles of iron, silica, etc., merely lodge within the air cells of the hungs or penetrate through their walls into the tissue between them.— But Professor Zenker informs us that on ex- amining the lung of a woman who had been exposed to the dust of iron oxide, used in preparing books of gold leaf, he found the powder in the tissue between the air cells and in their walls, is well as in their eavities. From less than two ounces of this lung over twelve grains of iron oxide were- obtained by chemical methods; so that, if equally distributed through both lungs.	SPROUTING POTATOES TO ADVANCE THE CROP.—The Germantown Telegraph says: "Sprouting white potatoes will advance the crop two weeks. They should be cut so that about two eyes are allowed to each piece, and these should be planted in hot beds with very thin covering of soil; or it is better to plant in boxes and set these in a hot bed, so after they are properly sprouted they can be at once carried to the place of planting. If the nights should be anyway cold, protect with thin covering of straw when the plants make their appearance above ground. Some persons who want a large quantity sprouted, cut the potatoes as desired, and spread them on boards, boxes or crates, in a dark place, and when sprout- cd, say from an inch to an inch and a half, expose them to the light, moistening two or three times a week with tepid water. They should be planted out so that there is not

ESYPTIAN CORN 1	and shamned the door behind her. i "She is never so handsome as when she is in a rage," thought Fred to himself after she had gone, as he slowly folded up his pa- per and replaced it in his pocket. "I was a fool to goad her so; I shall never win her in that way. But I'll have her," he ex- claimed aloud. "By heaven, I'll have her, cost what it may!" Very different was the Fred Eckerson of the present, pacing nervously up and down the piazza, from the Fred Eckerson of a few moments ago receiving his dismissa from the woman he loved with such calm and imperturbable exterior, for he loved Becky Newton with all his heart. The read difficulty in the way, as he more than half suspected, was not so much with himself as in his pocket. Becky Newton had an insu perable objection to an empty wallet. The daughter of a wealthy Louisiana planter reared in luxury, and the recipient of a weekly allowance of pin money sufficient to pay Fred's whole bills for a month, she had no immediate idea of changing her situa tion for one of less comfort and independ ence. Besides, it had been intimated to her that a neighboring planter of unusually aristocratic lineage had looked upon her with covetous eyes. To be sure he was old and ugly, but he was rich, and un her pres- ent mercenary state of mind Miss Becky	not half believe him. Their churnsy vessel floated on, now root first, now sideways, and now half submerg- ed beneath the boiling current. Their pre- carious hold became more uncertain as their frames became chilled by the cold water, and every plunge of the log threat- ened to east them once more into the river. In vain Fred endeavored to attract the at- tention of some one on shore. The cotton- wood retained a course nearly in the mid- dle of the stream, too far from either bank to render their outcries of much avail. As it grew dark their situation seemed more and more hopeless, and to Becky there ap- peared to be no escape from certain death, either by drowning in the darkness or by exhaustion before daylight. Yet to die in this man's arms seemed not wholly a terror. She could hardly think, if death must come, of any other way in which she would rather meet it. Was if possible she loved him, and must needs be brought within the valley of the shadow before she could know her heart? Had she loved him all along? While she was think a woke the stars were out, but she was warm and comfortable. Raising her head, she found herself enveloped in Fred's coat.	R. A. S., upon "Periodic Changes in the Magnetic Condition of the Earth and in the Distribution of Temperature on its Surface," in which he says: "It has long been sus- pected that the same causes which produce the spots on the sun's disk must in some way have an important influence on the phe- nomena of our own atmosphere. The facts now given convert this suspicion into a cer- tainty, and it is not perhaps too much to say that meteorology can never take rank as a true science while our knowledge of the sun remains in its present imperfect state." Other observers have come to the same conclusion. Steinmetz quotes from Mr. Fullbrook, the well-known writer on rain-fall and metcor- ology, as follows: "From extensive obser- vations he believes he has established the fact that whenever two planets form a right line with the earth, some disturbance con- nected with their light, electricity, or mag- netic reaction, takes place in the atmosphere, and a much larger quantity of rain-espe- cially about the fourth or fifth day after- is the result; and the greater number of the more violent and extensive storms and hur- ricanes have occurred at or about the time of this creess of rain. This fact Mr. Full- brook assures us," says Steinmetz, "he has verified by the investigation of three hun-	awhile in a labyrinth of perplexing and per- haps unprofitable argument.— <i>Boston Post.</i> Inhalation of Dust by Workmen. The injurious effect of exposure to the dust of various manufacturing establish- ments has not unfrequently been dwelt upon with more or less force; but we are hardly prepared for the result of certain specific investigations on this subject. It has long been a disputed point whether the particles of iron, silica, etc., merely lodge within the air cells of the lungs or penetrate through their walls into the tissue between them.— But Professor Zenker informs us that on ex- amining the lung of a woman who had been exposed to the dust of iron oxide, used in preparing books of gold leaf, he found the powder in the tissue between the air cells and in their walls, is well as in their cavities. From less than two ounces of this lung over twelve grains of iron oxide were- obtained by chemical methods; so that, if equally distributed through both lungs, there must have been at least three quarters of an ounce inhaled. In another case—that of a workman exposed to the dust of a mix- ture used in preparing ultramarine substan- ces—he found a quantity estimated at fully an ounce.— <i>Horper's</i> .	SPROUTING POTATOES TO ADVANCE THE CROP.—The Germantown Telegraph says: "Sprouting white potatoes will advance the crop two weeks. They should be cut so that about two eyes are allowed to each piece, and these should be planted in hot beds with very thin covering of soil; or it is better to plant in boxes and set these in a hot bed, so after they are properly sprouted they can be at once carried to the place of planting. If the nights should be anyway cold, protect with thin covering of straw when the plants make their appearance above ground. Some persons who want a large quantity sprouted, cut the potatoes as desired, and spread them on boards, boxes or crates, in a dark place, and when sprout- cd, say from an inch to an inch and a half, expose them to the light, moistening two or three times a week with tepid water. They should be planted out so that there is not more than two inches of soil over the top of the sprouts." CHLORAL INTONICATION.—As opium-eat- ing, absinthe-drinking, and liquor-drinking have become evils that annoy society, so the use of chloral is likely to become as troublesome. To drive away wakefulness,

The subscriber offers to the farmers through the found to ripen if planted even the last of July. It is stimated, from its very prolific qualities, to yield 150 bushels per acre, and weighs, by measure, to the bushel. This corn was produced from some procured direct from Mr. Jones, our Con- sular Agent, directly on the return from Experiment.	and shamned the door behind her. i "She is never so handsome as when she is in a rage," thought Fred to himself after she had gone, as he slowly folded up his pa- per and replaced it in his pocket. "I was a fool to goad her so; I shall never win her in that way. But I'll have her," he ex- claimed aloud. "By heaven, I'll have her, cost what it may!" Very different was the Fred Eckerson of the present, pacing nervously up and down the present, pacing nervously up and down the piazza, from the Fred Eckerson of a few moments ago receiving his dismissa from the woman he loved with such calm and imperturbable exterior, for he loved Becky Newton with all his heart. The rea difficulty in the way, as he more than half suspected, was not so much with himself as in his pocket. Becky Newton had an insu perable objection to an empty wallet. The daughter of a wealthy Louisiana planter reared in luxury, and the recipient of a weekly allowance of pin money sufficient the pay Fred's whole bills for a month, she had no inmediate idea of changing her situa tion for one of less comfort and independ ence. Besides, it had been intimated to her that a neighboring planter of unusually aristocratic lineage had looked upon her with covetous eyes. To be sure he was old and ugly, but he was rich, and m her press ent mercenary state of mind Miss Becky Newton did not desire to allow such a chance of becoming a wealthy widow to slip by unimproved. Bu dalas for human naturet if Becky war really so indifferent to Fred Eckerson, who	not half believe him. Their chumsy vessel floated on, now root first, now sideways, and now half submerg- ed beneath the boiling current. Their pre- carious hold became more uncertain as their frames became chilled by the cold water, and every plunge of the log threat- ened to east them once more into the river. In vain Fred endeavored to attract the at- tention of some one on shore. The cotton- wood retained a course nearly in the mid- d le of the stream, too far from either bank to render their outcries of nuch avail. As it grew dark their situation seemed more and more hopeless, and to Becky there ap- peared to be no escape from certain death, either by drowning in the darkness or by exhaustion before daylight. Yet to die in this man's arms seemed not wholly a terror. She could hardly think, if death must come, of any other way in which she would rather meet it. Was if possible she loved him, and must needs bo brought within the valley of the shadow before she could know her heart? Had she loved him all along? While she was think ing about it, chilled by the exposure and the night air, she fell asleep. When she awoke the stars were out, but she was warn and comfortable. Raising her head, she found herself enveloped in Fred's coat. "Fred." "You have robbed yourself to keep means warm. You are freezing." "No, I ain't. I took it off because i was so awful hot." and taking out his liand	<ul> <li>R. A. S., upon "Periodic Changes in the Magnetic Condition of the Earth and in the Distribution of Temperature on its Surface," in which he says: "It has long been suspected that the same causes which produce the spots on the sun's disk must in some way have an important influence on the phenomena of our own atmosphere. The facts now given convert this suspicion into a certainty, and it is not perhaps too much to say that meteorology can never take rank as a true science while our knowledge of the sun remains in its present imperfect state." Other observers have come to the same conclusion. Steinmetz quotes from Mr. Fullbrook, the well-known writer on rain-fall and metcorology, as follows: "From extensive observations he believes he has established the fact that whenever two planets form a right line with the earth, some disturbance connected with their light, electricity, or magnetic reaction, takes place in the atmosphere, and a much larger quantity of raim—especially about the fourth or fifth day after—is the result; and the greater number of the more violent and extensive storms and hurricanes have occurred at or about the time of this creess of rain. This fact Mr. Full-brook assures us," says Steinmetz, "he has verified by the investigation of three hundred consecutive conjunctions of planets in longitude, between the years 1807 and 1830 inclusive."</li> </ul>	awhile in a labyrinth of perplexing and per- haps unprofitable argument.— <i>Boston Post.</i> Inhalation of Dust by Workmen. The injurious effect of exposure to the dust of various manufacturing establish- ments has not unfrequently been dwelt upon with more or less forces, but we are hardly prepared for the result of certain specific investigations on this subject. It has long been a disputed point whether the particles of iron, silica, etc., merely lodge within the air cells of the hungs or penetrate through their walls into the tissue between them.— But Professor Zenker informs us that on ex- amining the lung of a woman who had been exposed to the dust of iron oxide, used in preparing books of gold leaf, he found the powder in the tissue between the air cells and in their walls, is well as in their eavities. From less than two ounces of this lung over twelve grains of iron oxide were- obtained by chemical methods; so that; if equally distributed through both lungs, there must have been at least three quarters of an ounce inhaled. In another case—that of a workman exposed to the dust of a mix- ture used in preparing ultramarine substan- ces—he found a quantity estimated at fully an ounce.— <i>Harper's</i> . The Sick Chamber at Night. The glare, of the bright light at night tends to keep an invalid iron steeping, and yet in many cases it is not desirable to be in total darkness. If a hurping camber being to be in	SPROUTING POTATOES TO ADVANCE THE CROP.—The Germantown Telegraph says: "Sprouting white potatoes will advance the crop two weeks. They should be cut so that about two eyes are allowed to each piece, and these should be planted in hot beds with very thin covering of soil; or it is better to plant in boxes and set these in a hot bed, so after they are properly sprouted they can be at once carried to the place of planting. If the nights should be anyway cold, protect with thin covering of straw when the plants make their appearance above ground. Some persons who want a large quantity sprouted, cut the potatoes as desired, and spread them on boards, boxes or crates, in a dark place, and when sprout- cd, say from an inch to an inch and a half, expose them to the light, moistening two or three times a week with tepid water. They should be planted out so that there is not more than two inches of soil over the top of the sprouts." CHLORAL INTONICATION.—As opium eat- ing, absinthe-drinking, and liquor-drinking have become evils that annoy society, so the use of chloral is likely to become as troublesome. To drive away wakefulness, and care, and trouble, and to forget their afflictions, persons now resort to this new drug, and in some its use in this manner be- comes a tirm habit. Independent of the ir- ritation of the irrot, and fauces, and nose that it causes and the agravation of some

Very different was the Fred Eckerson of the present, pacing nervously up and down the piazza, from the Fred Eckerson of a few moments ago receiving his dismissa from the woman he loved with such calm and imperturbable exterior, for he loved Becky Newton with all his heart. The rea difficulty in the way, as he more than half suspected, was not so much with himself as in his pocket. Becky Newton had an insu perable objection to an empty wallet. The daughter of a wealthy Louisiana planter reared in luxury, and the recipient of a weekly allowance of pin money sufficient the pay Fred's whole bills for a month, she had no immediate idea of changing her situat tion for one of less comfort and independ ence. Besides, it had been intimated to her that a neighboring planter of unusually aristocratic lineage had looked upon her with covetous eyes. To be sure he was old and ugly, but he was rich, and m her press ent mercenary state of mind Miss Becky Newton did not desire to allow such a chance of becoming a wealthy widow to slip by unimpróved. Bu alias for human naturet if Becky wa really so indifferent to Fred Eckerson, why did she run up stairs after thiat interview and take the starch out of her nice, cleand pillow-shams by crying herself into hyster ics on the bed? It was not all wrath, no all vesation, not all pique. There wa	not half believe him. Their chumsy vessel floated on, now root first, now sideways, and now half submerge- ed beneath the boiling current. Their pre- carious hold became more uncertain as their frames became chilled by the cold water, and every plunge of the log threat- ened to east them once more into the river. In vain Fred endeavored to attract the at- tention of some one on shore. The cotton- wood retained a course nearly in the mid- d le of the stream, too far from either bank to render their outeries of much avail. As it grew dark their situation seemed more and more hopeless, and to Becky there ap- peared to be no escape from certain death, either by drowning in the darkness or by exhaustion before daylight. Yet to die in this man's arms seemed not wholly a terror. She could hardly think, if death must come, of any other way in which she would rather meet it. Was it possible she loved him, and must needs bo brought within the valley of the shadow before she could know her heart? Had she loved him all along? While she was think ing about it, chilled by the exposure and the night air, she fell askep. When she awoke the stars were out, but she was warn and comfortable. Raising her head, she found herself enveloped in Fred's coat. " Tred." " Well." " You have robbed yourself to keep me warm. You are freezing." " No, I ain't. I took it off because i was so awful hot;" and taking out his hand kerchief with his disengaged hand, he madi- a pretense of wiping the perspiration from his brow. " How long have I been askep?" " About three hours. We are duitting in	R. A. S., upon "Periodic Changes in the Magnetic Condition of the Earth and in the Distribution of Temperature on its Surface," in which he says: "It has long been sus- pected that the same causes which produce the spots on the sun's disk must in some way have an important influence on the phe- nomena of our own atmosphere. The facts now given convert this suspicion into a cer- tainty, and it is not perhaps too much to say that meteorology can never take rank as a true science while our knowledge of the sun remains in its present imperfect state." Other observers have come to the same conclusion. Steinmetz quotes from Mr. Fullbrook, the well-known writer on rain-fall and meteor- ology, as follows: "From extensive obser- vations he believes he has established the fact that whenever two planets form a right line with the earth, some disturbance con- nected with their light, electricity, or mag- netic reaction, takes place in the atmosphere, and a much larger quantity of rain—espe- cially about the fourth or fifth day after— is the result; and the greater number of the more violent and extensive storms and hur- ricanes have occurred at or about the time of this cross of rain. This fact Mr. Full- brook assures us," says Steinmetz, " he has verified by the investigation of three hun- dred consecutive conjunctions of planets in longitude, between the years 1807 and 1830 inclusive." Unquestionably the forces in action upon this world are in connection with, and in- fluenced by, those operating in the universe. The attraction of gravitation, which makes the rain fall, is the same force which, in a wider sphere, keeps the planets in their or- bits; and a drop of dew assumes its spheri- tor bits; and a drop of dew assumes its spheri-	awhile in a labyrinth of perplexing and per- haps unprofitable argument.— <i>Boston Post.</i> Inhalation of Dust by Workmen. The injurious effect of exposure to the dust of various manufacturing establish- ments has not unfrequently been dwelt upon with more or less forces, but we are hardly prepared for the result of certain specific investigations on this subject. It has long been a disputed point whether the particles of iron, silica, etc., merely lodge within the air cells of the hungs or penetrate through their walls into the tissue between them.— But Professor Zenker informs us that on ex- amining the lung of a woman who had been exposed to the dust of iron oxide, used in preparing books of gold leaf, he found the powder in the tissue between the air cells and in their walls, is well as in their cavities. From less than two ounces of this lung over twelve grains of iron oxide were- obtained by chemical methods; so that; if equally distributed through both lungs, there must have been at least three quarters of an ounce inhaled. In another case—that of a workman exposed to the dust of a mix- ture used in preparing ultramarine substan- ces—he found a quantity estimated at fully an ounce.— <i>Harper's</i> . The Siek Chamber at Night. The glare of the bright light at night tends to keep an invalid iron sleeping, and yet in many cases it is not desirable to be in total darkness. If a burning camble has common salt put on the melted part of the candle until it reaches the black part of the	SPROUTING POTATOES TO ADVANCE THE CROP.—The Germantown Telegraph says: "Sprouting white potatoes will advance the crop two weeks. They should be cut so that about two eyes are allowed to each piece, and these should be planted in hot beds with very thin covering of soil; or it is better to plant in boxes and set these in a hot bed, so after they are properly sprouted they can be at once carried to the place of planting. If the nights should be anyway cold, protect with thin covering of straw when the plants make their appearance above ground. Some persons who want a large quantity sprouted, cut the potatoes as desired, and spread them on boards, boxes or crates, in a dark place, and when sprout- cd, say from an inch to an inch and a half, expose them to the light, moistening two or three times a week with tepid water. They should be planted out so that there is not more than two inches of soil over the top of the sprouts." CHLORAL INTOXICATION.—As opium eat- ing, absinthe-drinking, and liquor-drinking have become evils that annoy society, so the use of chloral is likely to become as troublesome. To drive away wakefulness, and care, and trouble, and to forget their afflictions, persons now resort to this new drug, and in some its use in this manner be- comes a tirm habit. Independent of the ir- ritation of the ihroat, and fauces, and nose that it causes, and the aggravation of some cutaneous and other disorders, it is very pleasant to take. But after its use for a time the cyfsight becomes weak and dim, with tonnection of the comes weak and dim,

NOTIONS.	AND MOULDINGS, constantly on hand, or manufactured to order. <b>Planing and Matching</b> done promptly, and in the best manner. The best workmen employed, and none but the best seasoned iumber used. Encourage home industry. Factory near the foot of Main Street. Jan. 1, 1872-tf. DENJ AUSTIN. <b>EXPERIMENTIAL STREET</b> THE subscriber offers to the farmers through the county the Egyptian Corn, which upon trial was found to ripen if planted even the last of July. It is satimated, from its very prolife qualities, to yield 150 bushels per acre, and weighs, by measure, subar Agent, directly on his return from Egypt. If needs no different culturofrom this of other varieties, and in the South two crops can be raised on the same ground in one year. Hypows in the form of a tree, and is ears. For domestic use it is unparalleled. When ground and properly bolied, it is equal in color and intences to wheaton flour. As a forage crop, by sow- ing in drills or broadcast (for early feed,) there is no kind of corn so well adapted to milich cows, and none wheat of corn so well adapted to milich cows, and none	and shamned the door behind her. i "She is never so handsome as when she is in a rage," thought Fred to himself after she had gone, as he slowly folded up his pa- per and replaced it in his pocket. "I was a fool to goad her so; I shall never win her in that way. But I'll have her," he ex- claimed aloud. "By heaven, I'll have her," cost what it may!" Very different was the Fred Eckerson of the present, pacing nervously up and down the piazza, from the Fred Eckerson of few moments ago receiving his dismissa from the woman he loved with such calm and imperturbable exterior, for he loved Becky Newton with all his heart. The rea difficulty in the way, as he more than half suspected, was not so much with bimself as in his pocket. Becky Newton had an insu perable objection to an empty wallet. The daughter of a wealthy Louisiana planter reared in luxury, and the recipient of aweekly allowance of pin money sufficient to pay Fred's whole bills for a month, she had no immediate idea of changing her situat tion for one of less comfort and independ ence. Besides, it had been intimated to her that a neighboring planter of unusually dristocratic lineage had looked upon her with covetous eyes. To be sure he was old and ugly, but he was rich, and in her press ent mercenary state of mind Miss Becky Newton did not desire to allow such at chance of becoming a wealthy widow to slip by unimproved. Bu alas for human naturet if Becky wa really so indifferent to Fred Eckerson, why did she run up stairs after that interview and take the starch out of her nice, clean pillow-shams by crying herself into hyster ics on the bed? It was not all wrath, no all vexation, not all pique. There wa somewhere deep down in Becky Newton'	not half believe him. Their chumsy vessel floated on, now root first, now sideways, and now half submerg- ed beneath the boiling current. Their pre- carious hold became more uncertain as their frames became chilled by the cold water, and every plunge of the log threat- ened to east them once more into the river. In vain Fred endeavored to attract the at- tention of some one on shore. The cotton- wood retained a course nearly in the mid- d le of the stream, too far from either bank to render their outcries of much avail. As it grew dark their situation seemed more and more hopeless, and to Becky there ap- peared to be no escape from certain death, either by drowning in the darkness or by exhaustion before daylight. Yet to die in this man's arms seemed not which she would rather meet it. Was it possible she loved him, and must needs be brought within the valley of the shadow before she could know her heart? Had she loved him all along? While she was think in gabout it, chilled by the exposure and the night air, she fell asleep. When she awoke the stars were out, but she was warn and comfortable. Raising her head, she found herself enveloped in Fred's coat. ""Well." "You have robbed yourself to keep mo warm. You are freezing." "No, I ain't. I took it off because i was so awfut hot;" and taking out his hand kerchief with his disengaged hand, he made a pretense of wiping the perspiration from his brow. "How long have I been asleep?" "About three hours. We are duifting in shore now."	R. A. S., upon "Periodic Changes in the Magnetic Condition of the Earth and in the Distribution of Temperature on its Surface," in which he says: "It has long been sus- pected that the same causes which produce the spots on the sun's disk must in some way have an important influence on the phe- nomena of our own atmosphere. The facts now given convert this suspicion into a cer- tainty, and it is not perhaps too much to say that meteorology can never take rank as a true science while our knowledge of the sun remains in its present imperfect state." Other observers have come to the same conclusion. Steinmetz quotes from Mr. Fullbrook, the well-known writer on rain-fall and metcor- ology, as follows: "From extensive obser- vations he believes he has established the fact that whenever two planets form a right line with the earth, some disturbance con- nected with their light, electricity, or mag- netic reaction, takes place in the atmosphere, and a much larger quantity of raim—espe- cially about the fourth or fifth day after— is the result; and the greater number of the more violent and extensive storms and hur- ricanes have occurred at or about -the time of this creess of rain. This fact Mr. Full- brook assures us," says Steinmetz, "he has verified by the investigation of three hun- dred consecutive conjunctions of planets in longitude, between the years 1807 and 1830 inclusive." Unquestionably the forces in action upon this world are in connection with, and jin- fluenced by, those operating in the universe. The attraction of gravitation, which makes the rain fall, is the same force which, in a wider sphere, keeps the planets in their or- bits; and a drop of dew assumes its spheri- cal form by the action of the same force which rounded the earth and the sun him-	awhile in a labyrinth of perplexing and per- haps unprofitable argument.— <i>Boston Post.</i> Inhalation of Dust by Workmen. The injurious effect of exposure to the dust of various manufacturing establish- ments has not unfrequently been dwelt upon with more or less force; but we are hardly prepared for the result of certain specific investigations on this subject. It has long been a disputed point whether the particles of iron, silica, etc., merely lodge within the air cells of the lungs or penetrate through their walls into the tissue between them.— But Professor Zenker informs us that on ex- amining the lung of a woman who had been exposed to the dust of iron oxide, used in preparing books of gold leaf, he found the powder in the tissue between the air cells and in their walls, is well as in their cavities. From less than two ounces of this lung over twelve grains of iron oxide were- obtained by chemical methods; so that, if equally distributed through both lungs, there must have been at least three quarters of an ounce inhaled. In another case—that of a workman exposed to the dust of a mix- ture used in preparing ultramarine substan- ces—he found a quantity estimated at fully an ounce.— <i>Horper's</i> . The Sick Chamber at Night. The glare of the bright light at night tends to keep an invalid from sleeping, and yet in many cases it is not desirable to be in total darkness. If a burning candle has common salt put on the melted part of the candle until it reaches the black part of the wick, it will not only cause the candle to burn very slow, but unike it give anfild and mellow and dimitight, proving very agreea- ble to the invalid.	SPROUTING POTATOES TO ADVANCE THE CROP.—The Germantown Telegraph says: "Sprouting white potatoes will advance the crop two weeks. They should be cut so that about two eyes are allowed to each piece, and these should be planted in hot beds with very thin covering of soil; or it is better to plant in boxes and set these in a hot bed, so after they are properly sprouted they can be at once carried to the place of planting. Encourate home industry. <b>Factory near the foot of Main Street.</b> Jan. 1, 1872-47. DENJ AUSTIN. <b>EXPORTION COURD 1</b> THE subscriber offers to the farmers through the country the Egyptian Corn, which upon trial was stimated, from its very prolific qualities, to yield 150 bushels per acre, and weights, by measure, to as a first throw the corn was produced in the South two crops can be raised on the same ground in one year. It grows in the form Argypt. It needs no different culture from that of other varieties, by ears have grown upon one stalk—average from 5 to by ears. For domesit (for early feed.) there is no by ears for domesit (for early feed.) there is no by early and properly boiled, it is equal in color and by ears have grown upon one stalk or corn. There is the procedue it is unparalleled. When ground and properly boiled, it is equal in color and by ears. For domesit (for early feed.) there is no stind of corn so well adapted to mich cows, and none that will yield half the value in stalk or corn. Terms :—In order that all may receive seed, we have reduced the burge to one dollare a package. Aw	and shamned the door behind her. i "She is never so handsome as when sho is in a rage," thought Fred to himself after she had gone, as he slowly folded up his pa- per and replaced it in his pocket. "I was a fool to goad her so; I shall never win her in that way. But I'll have her," he ex- claimed aloud. "By heaven, I'll have her, cost what it may!" Very different was the Fred Eckerson of the present, pacing nervously up and down the piazza, from the Fred Eckerson of a few moments ago receiving his dismissa from the woman he loved with such calm and imperturbable exterior, for he loved Becky Newton with all his heart. The read difficulty in the way, as he more than half suspected, was not so much with himself as in his pocket. Becky Newton had an insu perable objection to an empty wallet. The daughter of a wealthy Louisiana planter reared in luxury, and the recipient of a weekly allowance of pin money sufficient to pay Fred's whole bills for a month, she had no immediate idea of changing her situa tion for one of less comfort and independ ence. Besides, it had been intimated to her that a neighboring planter of unusually aristocratic lineage had looked upon her with covetous eyes. To be sure he was old and ugly, but he was rich, and in her press- ent mercenary state of mind Miss Becky Newton did not desire to allow such a chance of becoming a wealthy widow to slip by unimproved. Bu datas for human nature! if Becky wa really so indifferent to Fred Eckerson, why did she run up stairs after that interview and take the starch out of her nice, clean pillow-shams by crying herself into hyster ics on the bed? It was not all wrath, no all vexation, not all pique. There wa somewhere deep down in Becky Newton' heart a feeling very much akin to remorse She was not sure that she had done. She	not half believe him.) Their chumsy vessel floated on, now root first, now sideways, and now half submerg- ed beneath the boiling current. Their pre- carious hold became more uncertain as their frames became chilled by the cold water, and every plunge of the log threat- ened to east them once more into the river. In vain Fred endeavored to attract the at- tention of some one on shore. The cotton- wood retained a course nearly in the mid- dle of the stream, too far from either bank to render their outcries of much avail. As it grew dark their situation seemed more and more hopeless, and to Becky there ap- peared to be no escape from certain death, either by drowning in the darkness or by exhaustion before daylight. Yet to die in this man's arms seemed nod wholly a terror. She could hardly think, if death must come, of any other way in which she would rather meet it. Was if possible she loved him, and must needs be brought within the valley of the shadow before she could know her heart? Had she loved him ali along? While she was think ing about it, chilled by the exposure and the night air, she fell asleep. When she awoke the stars were out, but she was warn and comfortable. Raising her head, she found herself enveloped in Fred's coat. "Fred." "No, I ain't. I took it off because i was so awful hot," and taking out his liand kerchief with his disengaged hand, he made a pretense of wiping the perspiration from his brow. "How long have I been asleep?" "About three hours. We are duifting in shore now." "Shall we be saved?" "Low in a going to take mine away."	R. A. S., upon "Periodic Changes in the Magnetic Condition of the Earth and in the Distribution of Temperature on its Surface," in which he says: "It has long been sus- pected that the same causes which produce the spots on the sun's disk must in some way have an important influence on the phe- nomena of our own atmosphere. The facts now given convert this suspicion into a cer- tainty, and it is not perhaps too much to say that meteorology can never take rank as a true science while our knowledge of the sun remains in its present imperfect state." Other observers have come to the same conclusion. Steinmetz quotes from Mr. Fullbrook, the well-known writer on rain-fall and meteor- ology, as follows: "From extensive obser- vations he believes he has established the fact that whenever two planets form a right line with the earth, some disturbance con- nected with their light, electricity, or mag- netic reaction, takes place in the atmosphere, and a much larger quantity of rain—espe- cially about the fourth or fifth day after— is the result; and the greater number of the more violent and extensive storms and hur- ricanes have occurred at or about the time of this cross of rain. This fact Mr. Full- brook assures us," says Steinmetz, "he has verified by the investigation of three hun- dred consecutive conjunctions of planets in longitude, between the years 1807 and 1830 inclusive."	awhile in a labyrinth of perplexing and per- haps unprofitable argument.— <i>Boston Post.</i> Inhalation of Dust by Workmen. The injurious effect of exposure to the dust of various manufacturing establish- ments has not unfrequently been dwelt upon with more or less forces, but we are hardly prepared for the result of certain specific investigations on this subject. It has long been a disputed point whether the particles of iron, silica, etc., merely lodge within the air cells of the hungs or penetrate through their walls into the tissue between them.— But Professor Zenker informs us that on ex- amining the lung of a woman who had been exposed to the dust of iron oxide, used in preparing books of gold leaf, he found the powder in the tissue between the air cells and in their walls, is well as in their cavities. From less than two ounces of this lung over twelve grains of iron oxide were- obtained by chemical methods; so that; if equally distributed through south lungs, there must have been at least three quarters of an ounce inhaled. In another case—that of a workman exposed to the dust of a mix- ture used in preparing ultramarine substan- ces—he found a quantity estimated at fully an ounce.— <i>Harper's</i> . The Sick Chamber at Night. The glare of the bright light at night tends to keep an invalid from sleeping, and yet in many cases it is not desirable to be in total darkness. If a burning candle has common salt put on the melted part of the candle until it reaches the black part of the conder cypedient in this connection: A noother expedient in this connection: A room can be very well centilated in the hot- ter nights by lighting a candle cand phagine	SPROUTING POTATOES TO ADVANCE THE CROP.—The Germantown Telegraph says: "Sprouting white potatoes will advance the crop two weeks. They should be cut so that about two eyes are allowed to each piece, and these should be planted in hot beds with very thin covering of soil; or it is better to plant in boxes and set these in a hot bed, so after they are properly sprouted they can be at once carried to the place of planting. If the nights should be anyway cold, protect with thin covering of straw when the plants make their appearance above ground. Some persons who want a large quantity sprouted, cut the potatoes as desired, and spread them on boards, boxes or crates, in a dark place, and when sprout- cd, say from an inch to an inch and a half, expose them to the light, moistening two or three times a week with tepid water. They should be planted out so that there is not more than two inches of soil over the top of the sprouts." CHLORAL INTOXICATION.—As opium eat- ing, absinthe-drinking, and liquor-drinking have become evils that annoy society, so the use of chloral is likely to become as troublesome. To drive away wakefulness, and care, and trouble, and to forget their afflictions, persons now resort to this new drug, and in some its use in this manner be- comes a tirm habit. Independent of the ir- ritation of the librot, and fauces, and nose that it causes, and the aggravation of some cutaneous and other disorders, it is very pleasant to take. But after its use for a time the cyfsight becomes welk and dim, with congestion of the globe swelling of the lids, and squetimes partial paralysis of lids. One characteristic of its frequent use is a black streak along the center of the tongue, as if ink had been rubbed over it. While it is said to be as hand to prove of the tongue, as if hick had been rubbed over it. While

The cotton- wood retained a course nearly in the mid- d le of the stream, too far from either bank to render their outeries of nuch avail. As it grew dark their situation seemed more and more hopeless, and to Becky there ap- peared to be no escape from certain death, either by drowning in the darkness or by exhaustion before daylight. Yet to die in this man's arms seemed not wholly a terror. She could hardly think, if death must come, of any other way in which she would rather meet it. Was if possible she loved him, and must needs bo brought within the valley of the shadow before she could know her heart? Had she loved him all along? While she was think ing about it, chilled by the exposure and the night air, she fell asleep. When she awoke the stars were out, but she was warn and comfortable. Raising her head, she found herself enveloped in Fred's coat. "Fred." "You have robbed yourself to keep meand warm. You are freezing." "No, I ain't. I took it off because i was so awful hot," and taking out his liand kerchief with his disengaged hand, he madda a pretense of wiping the perspiration from his brow. "How long have I been asleep?" "About three hours. We are diffing in shore now." "Shall we be saved?" "How long have I been asleep?" "About three hours. We are diffing in shore now." "Shall we be saved?" "How long have I been asleep?" "About three hours. We are diffing in shore now." "Shall we be saved?" "How long have I been asleep?"	<ul> <li>R. A. S., upon "Periodic Changes in the Magnetic Condition of the Earth and in the Distribution of Temperature on its Surface," in which he says: "It has long been suspected that the same causes which produce the spots on the sun's disk must in some way have an important influence on the phenomena of our own atmosphere. The facts now given convert this suspicion into a certainty, and it is not perhaps too much to say that meteorology can never take rank as a true science while our knowledge of the sun remains in its present imperfect state." Other observers have come to the same conclusion.</li> <li>Steinmetz quotes from Mr. Fullbrook, the well-known writer on rain-fall and meteorology, as follows: "From extensive observations he believes he has established the fact that whenever two planets form a right line with the earth, some disturbance connected with their light, electricity, or magnetic reaction, takes place in the atmosphere, and a much larger quantity of rain—especially about the fourth or fifth day after—is the result; and the greater number of the more violent and extensive storms and hurricanes have occurred at or about the time of this creess of rain. This fact Mr. Full-brook assures us," says Steinmetz, "he has verified by the investigation of three hundred consecutive conjunctions of planets in their orbits; and a drop of dew assumes its sphering. The attraction of gravitation, which makes the rain fall, is the same force which, in a wider sphere, keeps the planets in their orbits; and a drop of dew assumes its sphering. The attraction of cosmical forces, and the curverse which rounded the earth and the sun himself. The circulation of the atmosphere, like thore in the occans, result from the action of universal causes.—<i>E. Hondural in Harpar</i>.</li> </ul>	awhile in a labyrinth of perplexing and per- haps unprofitable argument.— <i>Boston Post.</i> Inhalation of Dust by Workmen. The injurious effect of exposure to the dust of various manufacturing establish- ments has not unfrequently been dwelt upon with more or less force; but we are hardly prepared for the result of certain specific investigations on this subject. It has long been a disputed point whether the particles of iron, silica, etc., merely lodge within the air cells of the lungs or penetrate through their walls into the tissue between them.— But Professor Zenker informs us that on ex- amining the lung of a woman who had been exposed to the dust of iron oxide, used in preparing books of gold leaf, he found the powder in the tissue between the air cells and in their walls, his well as in their eavities. From less than two ounces of this lung over twelve grains of iron oxide were- obtained by chemical methods; so that, if equally distributed through both lungs, there must have been at least three quarters of an ounce inhaled. In another case—that of a workman exposed to the dust of a mix- ture used in preparing ultramarine substan- ces—he found a quantity estimated at fully an ounce.— <i>Harper's</i> . The Sick Chamber at Night. The glare of the bright light at night tends to keep an invalid from sleeping, and yet in many cases it is not desirable to be in total darkness. If a burning candle has common salt put on the melted part of the wick, it will not only cause the candle to burn very slow, but mike it give a nilid and mellow and dimitight, proving very agreen- ble to the invalid. Another expedient in this connection: A room can be very well ventilated in the het- ter nights by lighting a candle (and placing it on the hearth in the freplace, This causes	SPROUTING POTATOES TO ADVANCE THE Unor.—The Germantown Telegraph says : "Sprouting white potatoes will advance the crop two weeks. They should be cut so that about two eyes are allowed to each piece, and these should be planted in hot beds with very thin covering of soil; or it is better to plant in boxes and set these in a hot bed, so after they are properly sprouted they can be at once carried to the place of planting. If the nights should be anyway cold, protect with thin covering of straw when the plants make their appearance above ground. Some persons who want a large quantity sprouted, cut the potatoes as desired, and spread them on boards, boxes or crates, in a dark place, and when sprout- ed, say from an inch to an inch and a half, expose them to the light, moistening two or three times a week with tepid water. They should be planted out so that there is not more than two inches of soil over the top of the sprouts." CHLORAL INTOXICATION.—As opium eat- ing, absinthe-drinking, and liquor-drinking have become evils that annoy society, so the use of chloral is likely to become as troublesome. To drive away wakefulness, and care, and trouble, and to forget their afflictions, persons now resort to this new drug, and in some its use in this manner be- comes a tirm habit. Independent of the ir- ritation of the throat, and fauces, and nose that it causes, and the aggravation of some cutaneous land other disorders, it is very pleasant to take. But after its use for a time the cyfsight becomes weak and dim, with congestion of the globe swelling of the lids, and sequetimes partial paralysis of lids. One characteristic of its frequent use is a black streak along the center of the tongue, as if ink had been rubbed over it. While it is said to be as hard to break off from its use as rum drinking, the delirium tremens symptoms often appear in the attempt to discontinue the habit of eating it.
