Thou bring'st the blossom to the bee, To earth a robe of emerald dye, The leastet to the naked tree, And rainbow in the sky;
I feel thy blest benign control

The pulses of my youth restore;
Opening the spring of sense and soul,
To love and joy once more. I will not people thy green bowers,

With corrow's pale and spectre band, Or blend with thine the faded flowers Of memory's distant land; For thou wert surely never given, To wake regret from pleasures gone, But like an angel sent from Heaven,

To sooth creation's groan. Then, while the groves thy garlands twine Thy spirit breathes in flower and tree, My heart shall kindle at thy shrine, And worship God in thee;

And in some calm sequestered spot,
While listening to thy choral strain, Past griefs shall be awhile forgot, And pleasure bloom again.

Select Miscellany.

The Potato.

This very valuable article of food is a tive of this country, its existence being itirely unknown to Europeans until it was rought to Ireland by the celebrated naviator, Sir Walter Raleigh, in 1610. An anusing anecdote attended its first introducon. Sir Walter having planted in his garen the specimen which he had brought om Peru, awaited anxiously for its growth and maturity. By and by the plant sprung p, flowers appeared upon the stems, and nally these died and were succeeded by ttle apples, which he mistook for the potales. At length the stems began to wither, and the little apples at their extremities bean to wither likewise. On examining these e found them small, unpalatable, and by o means resembling the specimen which to had planted. Believing his experiment insuccessful, and in despair of succeeding in any future experiments with the article, e ordered his gardener to pull up the ernicious weed and throw it from his remises. In fulfiling this command the ardener found a bushel of potatoes adering to the roots of the plant. From this me the potato began to be cultivated in that sland, and it has long since formed the wo-thirds or three-fourths of the entire

food of its inhabitants. The potato was introduced into Sweden 1720, into Scotland in 1728, and into rance, Germany, Switzerland, Italy and ther countries of Europe about the same

In some parts of Europe the cultivation I this useful vegetable met with violent oposition by the more preindiced part of the cople. In Scotland the people were oposed to its cultivation and use because it vas not mentioned in the Bible. In France nobleman was defeated in his election on ccount of his benevolent exertions to foser its culture. In the Ionian Islands the riests and people rose in arms against the atroduction of the potato into their doainions, on the grounds that it was the foridden fruit mentioned in the Bible-the ause of man's fall. In most other counfries it required acts of Parliament to enourage its cultivation, before the prejudices f the masses against it would, yield. At ength, however, its extensive cultivation and general use extended throughout all Europe, and the European Provinces in America; and in most of these countries it till maintains its charactor as the most useal vegetable we possess.

Some sixty years ago the potato was in-Phillippine Islands.

in various ways, mostly boiled, roasted or

latter. As a preventative of scurvy, a disease which so often occurs in the ships upon the in the Gulf of Mexico suffered so severely during the late war, the potato, either boiled or raw, is a valuable article. At this time being plentifully supplied with potatoes, hence scurvy does not occur near so frequently among the crews and passengers as it did in former times .- Pittsburg Post.

St. Peter's Church in Rome.

A correspondent of the Missouri Republican writes a very interesting letter from the Eternal City. St. Peter's is to her as it is to thousands, the mightiest attraction in that famed city, she says

"If the stranger is filled with wonder and admiration as he walks up and down, and sometimes loses his way and his companions also, in the church below, with what surprise and astonishment does he ascend the dome of this magnificent temple. To do this you must obtain an order from the Director of the Fabrica of St. Peter, by a written application from the Consul; you have also to pay three or lour pauls at the foot of the stairs. The staircase is spiral and composed of broad thin stones, of the most easy and gentle ascent imaginable. It is said horses could travel up to the top of the church, with ease, . When you reach the roof, you are amazed to find yourself in up here. A fountain is also flowing, and the roof is paved with broad flat stones, and patrons. you can scarcely believe that you are lon the top of a building. After you have surveyed this village, and wondered long enough how people can possibly live on the roof-top, you will of course ascend the dome itself, which is not as easy a matter as to come up from below.

"I ought to say that before you commence the ascent of the dome, you must take another look at the statue of Christ and his Twelve Apostles, which stand in a row, on the front of the roof of the church. I hese statues are 17 feet in height, although, as you view them from the ground, they seem of the ordinary size. We traveled up to the base of the ball, which looks from the street no larger than a man's head; it the street no larger than a man's head; it s, however, eight feetan diameter, and will &c., &c. hold sixteen persons. At the bottom of the ball is a balcony, from which a view of surpassing beauty and interest is enjoyedsaid to be one of the finest scenes in Europe. Ancient and modern Rome are are spread out before you, with the Appenines on one side and the Mediterranean
on the other. While enjoying this delight

Curious Fact.

A young man in the township of Warsaw, Genesce county, New York, was engaged in cutting wood; and in felling a tree it became entangled in the branches of other trees. While endeavoring to disentangle the tree and bring it to the ground, it suddenly fell; and splitting at the butt, he roduced into India, and it now forms a was caught by the foot, and thus suspended common article of food in Bengal, the with his head downward. In this condition ladras Provinces, China, Java, and the he cried for help until his voice was gone and his strengeh well nigh exhausted. His axe had fallen, and he could hardly touch n every State from Maine to Texas; but the end of the helve with his finger. He specially in the north-eastern and middle labored to reach it, but it was all in vain. States. In the year 1840 one hundred Could he but get that, he could extricate millions bushels potatoes were raised in the himself. But alas! it was beyond his reach. Dited States alone; of these New York What was he to do? He had cried for help ielded thirty millions, Maine above ten until he could no longer speak. He was in millions, Pennsylvania nine millions and a the woods, three quarters of a mile from half, Vermont more than eight millions, and any human being. The weather was ex-New Hampshire six millions and a half, tremely cold, and he was hanging with his Vermont more than eight millions, and New | head downward, suffering extreme pain, not only in the foot which was caught in the The countries of Europe in which this cleft of the tree, but also in the head, caused rticle is most extensively cultivated, are by his unnatural position and the great exreland, Scotland, Poland and Switzerland, ertion he had put forth to make himself In Mexico and South America the potato heard. Death now seemed inevitable, uns much used as an article of diet, and less he could be immediately extricated.— Frows with a luxuriance unknown in most There was no alternative. Summoning all parts of the world. Travelers tell us that his courage, therefore, he came to the determination to make the attempt to cut off found some of the following desirable patterns: his leg; and should he succeed in doing almost every latitude and every variety of no surgeon at hand to take up the arteriesalmost every latitude and every variety of no surgeon at hand to take up the arteries— Western, ... . INVENTED BY L. S. BACON, OF LEROY, NEW YORK.

THE subscriber would respectfully inform the farmers and housekeepers of Tioga county, that he has the exclusive right to sell the above unrivalled and celebrated cook stove in this and the ad-

joining counties of Potter and McKean.

Eight hundred of the above Stores have been sold during the past year in the counties of Bradford,

Susquehanna and Wyoming, Pa., and all, without exception, have given the very best satisfaction.

The Improved Clinton Air-Tight Store is beyond a question the most durable and the very best

FARMER'S COOK STOVE in America. It is constructed without an inside plate, or an inside

FARMER'S COOK STOVE in America. The Store warms up quickly with as moderate an amount of Susquehanna and Wyoming, Pa., and all, without exception, have given the very best satisfaction.

The Improved Clinton Air-Tight Stove is beyond a question the most durable and the very best from making cheese, the Improved Clinton Air-Tight Stove is beyond a question the most durable and the very best the material used by farmers in making cheese, called Rennet, the effect has long been the special wonder of the Dairy. The curdling of milk is durable, it is desirable; the fire chamber is commodious, and has an additional one for fine fuel and chips, fuel as is desirable; the fire chamber is commodious, and has an additional one for fine fuel and chips, for summer use. The oven is very large, and bakes in the greatest perfection; the working surface is stonishing power. The stomach of a calf will is ample, and it has an excellent broiling hearth without the annoyance of grates. In short, it possible in its own weight fuel as is desirable; the fire chamber is commodious, and has an additional one for fine fuel and chips, for summer use. The oven is very large, and bakes in the greatest perfection; the working surface astonishing power. The stomach of a calf will is ample, and it has an excellent broiling hearth without the annoyance of grates. In short, it possesses in an eminentidegree, every necessary convenience, without departing from the simplicity in its construction and arrangements, that should be a striking characteristic of a Good Cook Stove; and which departure from simplicity is the almost universal feature of Low Oven Stoves. Persons wishing to purchase a Good Cook Stove, should by all means examine the Clinton Air-Tight, before purchasing.

The under of the first process of digestion. Rennet possesses astonishing power. The stomach of a calf will curdle nearly one thousand times its own weight of milk. Baron Leibeg states that, "One part of Pepsin dissolved in sixty thousand parts of water, will digest meat and other food." Diseased stomachs to purchase a Good Cook Stove, should by all means examine the Clinton Air-Tight, before purchasing.

The under of the first process of digestion. Rennet possesses astonishing power. The stomach of a calf will of milk. Baron Leibeg states that, "One part of Pepsin dissolved in sixty thousand parts of water, will digest meat and other food." Diseased stomachs produce no good Gastric Juice, Rennet or Pepsin. To show that this want may be perfectly supplied, we quote the following we quote the following the first process of digestion.

FLUID, or Gastric Juice! A great Dyspepsia Curer. Prepared from Rennet, or the fourth Stomach of the Ox, after directions of Baron Leibeg, the great Physiological Chemist, by J. S. Houghton, M. D., No. 11, North Eighth street, Philadelphia.

Philadelphia.

This is a truly wonderful remedy for INDIGESTION, DYSPEPSIA, JAUNDICE, LIVER
COMPLAINT, CONSTIPATION and DEBILI.
TY, curing after nature's own method, by Nature's

Another Scientific Wonder.

DEPSIN! AN ARTIFICIAL DIGESTIVE

own agent, the Gastric Juice.

Half a teaspoonful of this Fluid, infused in water, will digest or dissolve, five pounds of Roast Beef in about two hours, out of the stomach.

DIGESTION.

Digestion is chiefly performed in the stomach by the act of a fluid which freely exudes from the inner coat of that organ, when in a state of health called the Gastric Juice. The Fluid is the great called the Gastric Juice. The Fluid is the great solvent of the food, the purifying, preserving, and stimulating agent of the stomach and intestines. Without it there will be no digestion—no conversion of food and blood, and no nutrition of the body; but rather a foul, torpid, painful, and destructive condition of the whole digestive apparatus. tus. A weak, half dead, or injured stomach produces no good Gastric Juice, and hence the disease, distress and debility which ensue.

PEPSIN AND RENNET.

Pepsin is the chief element, or great digesting principle of the Gastric Juice. It is found in great abundance in the solid parts of the human stomach after death, and sometimes causes the stomach to digest itself or eat itself up. It is also found in the stomach of animals, as the ox, calf, &c. It is

Baron Leibeg, in his celebrated work on Animal Chemistry, says: "An Artificial Digestive Fluid may readily be prepared from the mucuos mem-brane of the stomach of the Calf, in which various articles of food, as meat and eggs, will be softened,

articles of 1000, as meat and eggs, will be sollened, changed and digested, just in the same manner as they would be in the human stomach."

Dr. Pereira, in his famous treatise on "Food and Diet," published by Wilson & Co., New York, page 25, states the same great fact, and describes the method of preparation. There are few higher authorities that the Pereira

the method of preparation, a here are tew higher authorities that Dr. Pereira.

Dr. John W. Draper, Professor of Chemistry in the Medical College of the University of New York, in his "Text Book of Chemistry," page 386, says, "it has been a question whether artifi-cial digestion could be performed—but it is now

universally admitted that it may be."

Professor Dunglison, of Philadelphia, in his great work on Human Physiology, devotes more than fifty pages to an examination of this subject. His experiments with Dr. Beaumont on the Gastrie is experiments with Great the living human stomach Juice, obtained from the living human stomach and from Animals are well known. "In all cases," he says, "digestion occurred as perfectly in the artificial as in the natural digestions."

AS A DYSPEPSIA CURER. Dr. Houghton's preparation of Pepsin has produced the most marvellous effects, curing cases of Debility, Nervous Decline, and Dyspeptic Consumption, supposed to be on the very verge of the grave. It is impossible to give the details of cases in the limits of this advertisement-but authenticated certificaies have been given of more than

200 REMARKABLE CURES In Philadelphia, New York, and Boston alone. These were nearly all desperate cases, and the cures were not only rapid and wonderful, but per-

for work, at the market prices.
H. W. DARTT,

June 4, 1850. H. N. GRAY.

MAREAN'S IMPROVED PATENT WASHING MACHINE.

THE subscriber would state, in connection with the above, that he is agent for Marcan's celebrated Machine for washing clothes, for Wellsborough, Delmar and Charleston. This Machine was patented on the 1st of January, 1850, and is fast taking the place of all other washing machines now in use. It is especially recommended for the case with which it works. Call and examine.

Wellsboro', June 4, '50. H. N. GRAY, Ag't.
