On planting so as to get the influence of the moon, Mr. Briggs lately wrote to the "Dollar Newspaper," Philadelphia, as follows:

Middlebury, April 20, 1866.

"PLANTING SO AS TO GET THE BENT-FLANTING SO AS TO GET THE BENE-FIT OF THE INFLUENCE OF THE MOON.

—In No. 45 of the 'Dollar Newspaper,'
I noticed an article headed, 'Planting in the Moon,' in which 'R. W: R.' says some of his heighbors were kind enough to inform him, that if he would be more moon. Now I would say to 'R. W.

I have observed, while tapping maple trees to make sugar, that the sap flowed upward in the new of the moon, and downward in the old of the moon; and that fruit picked in the full of the moon is more plump, juicy and tender, than that picked in the old of the moon, and more liable to rot from bruises; and furthermore, that trops planted early in the season, procrops planted early in the season, produce heavier and brighter grain. Now, my theory, from my own observation, is this: Calculate the time it will require for your various grain crops to mature, considering the soil, climate, condition of the soil, and cultivation after planting; and plant all grain crops that mature on the stalk, or above ground, so as to mature in the full of the moon, and all root crops so as to mature in the old of the moon. I have observed that seasons vary. To meet such variation, all grain not fully ripe and likely to ripen in the interim before the next full moon, should be cut and allowed to ripen in the shock. There are other observations sustaining my theory, but enough for the present.

In order that we may be understood on this point, we will suppose a case.—
If a man who was enjoying perfect health, should be placed on diet that is in its composition deficient of some one particular property that is necessary for the supply of some particular portion of the human system; and the system consequently becomes diseased; the question is to know the precise article to add to the diet, in order to obtain the need ful supply for the particular point defi-

Now, brother farmers, here is a wide field of study for us. We should know the properties contained in our soil; their ratio, one to the other, in amount; the properties of our various kinds of manure; the chemical changes produced by mixing manures, and also by mixing manures with our soil. We should know all the properties contained in our various kinds of grain and root crops; that we may know just what crop to plent in our sail, and what kind of manure, and what quantities of deficient kinds, to apply to our different kinds of
