Public that I send it forth as the grand romedial agent for the various diseases to which that noble and useful animal, the horse, is subject.

Many remedies have been offered to the Public under different forms, some of these are injurious, others at hest of little use, and many wholly improper to ansver the purpose for which they age recommended.

A judicious and really useful composition, free from those objections, has therefore long been desired by many gentlemen who have valuable horses, and are unwilling to trust them to the care of designing and pretended Farriers. Their wishes are at length fully gratified, by (Irf. Reale) being prevailed upon to allow this Embrocation granch has 'proved so efficacious to the various disease) to be prepared and brought out to the public.

Their penetrating properties stimulate the vital activities of the body, remove the obstructions of its organs, parify the blood and expel disease. They purge out the foul humors which breed and growtdisting their notional action and impurity the state and action and impurity to and temper, stimulate sluggish or disordered organs into their natural action, and impart tone and strength to the whole system. Not only do they cure the every day complaints of everybody, but formidable and dangerous diseases. While they produce powerful effects, they are at the same time, in diminished doses, the safest and best physic that can be employed for children. Being sugar-coated, they are pleasant to take; and, being purely vegetable, are entirely harmless. This new Compound, prepared by a practical Chemist, having a full knowledge of all the medical virtues of each ingredient that enters into its composition, is warranted to exceed anything of the kind ever yet offered to the Public as an external application for the diseases for which it is recommended.
