Thoughts are Sparks

—flashes of the mind that decide for success or failure.

The question is, what kind of sparks does your brain generate?

The brain, like a battery, must be supplied with certain elements to generate thought properly. These brain elements are water, albumen and phosphate of potash. If any of these are lacking in the daily food, brain and body energy are vitally lessened.

Are any lacking? Listen! Water and albumen are plentifully supplied in ordinary food, but phosphate of potash—together with other mineral elements—is almost wholly lacking in white bread and all white flour products.

Grape-Nuts

—containing all the nutriment of wheat and barley, including the precious phosphates so essential to perfect bodies and active brains, provides a food at once delicious, nourishing and economical.

A morning dish with cream furnishes POWER for accomplishment that many a man has come to appreciate.

Common sense goes a long way toward success. To eat right often means to BE right.

"There's a Reason"

Grocers everywhere sell Grape-Nuts.
