Landlady: 'Ever since Jones took Stuart's Dyspepsia Tablets I've lost my appetite on him.' If your stomach cannot digest your food, what will? Where's the relief? The answer is in Stuart's Dyspepsia Tablets, because, as all stomach troubles arise from indigestion and because one ingredient of Stuart's Dyspepsia Tablets is able to thoroughly and completely digest 3,000 grains of food, doesn't it stand to reason that these tablets are going to digest all the food and whatever food you put into your stomach?

Can Turn Bay Window into Miniature Conservatory

If Potted Plants Are Used They Can Be Kept in a Much Larger Variety Than by Using the Customary Window-Box. Washington, D. C., Nov. 27.—Many lovers of flowers who have not the time to bother with an indoor window-box, enjoy keeping a number of potted plants in the living room during the winter. Some, in fact, have turned a bay window into a small conservatory or winter garden merely by an attractive arrangement of plants in separate pots. When a window-box is filled, the plants must be of the same general character to be successful, but if one's winter garden is made up of plants in separate pots a greater variety may be kept, as each plant may receive different treatment in the matter of light, watering, soil, etc., and palms, rubber plants, and cacti, which call for special handling, may be added. Begonias, ivy, smilax and aspidistra, all good plants for indoor culture, demand more or less the same treatment, as was explained in a previous article sent out by the United States Department of Agriculture, describing the indoor window-box.

Stuart's Dyspepsia Tablets

Stuart's Dyspepsia Tablets are carefully made to supply every element lacking in a system afflicted with dyspepsia, indigestion, gastritis, stomach trouble, etc., and to aid healthy systems to digest difficult food at unseasonably hours. Just carry one of these little tablets in your purse or pocket. After every meal, no matter when eaten, you have always at hand the assistance that nature will relish and thrive upon. ONCE AN ACTIVE VOLCANO

Bunker Hill, South of Jonestown, Has Peculiar Formation. Lebanon, Nov. 27.—Bunker Hill, south of the borough of Jonestown, is the highest point of the trap rock hills and is of a very strange formation, with abundant and unmistakable evidence that it once was an active volcano. Basalt, igneous rocks, jasper, flint, milky and crystallized quartz, big and magnetic iron of 90 per cent. copper, marble, coal and other varieties of minerals are found. The formation is a regular conglomeration, besides in the volcanic-like there are mineral springs containing medicinal properties. A singular cavern is also found in the hill, but of late years was partly demolished by taking stone from the hill for building and other purposes. It is well known by tradition through the successive generations from the early settlers in the beginning of the eighteenth century, as told by the Indians, who declared once to substantiate their claim, produced large quantities of valuable ores to make purchases from the white people.
