The skin is one of the body's ther The skin is one of the body's thermostats that automatically regulate its temperature. If the heat grows excessive the blood vessels in the skin dilate and permit the circulation of an extraordinary amount of blood near the surface. This permits the radiation of the heat from the blood and the corresponding cooling of the body and stimulates a more active combustion.

When the body is exposed to cold if the skin is properly performing its functions it will contract and drive the blood away from the skin to concentrate its warmth near the vital organs. The ends of the nerves which give

The ends of the nerves which give The ends of the nerves which give us our sense of touch are located in the skin. This sensitiveness is for the continual protection of the body. In order that these various functions may be properly carried out it is essential that the skin be well cared for at all times. If the pores are not kept thoroughly clean, the poisonous excretions instead of being expelled are reabsorbed by the blood. Such a condition also prevents the skin from absorbing oxygen as it should do when properly performing its functions. Then too, there is the question of beauty. A clean, healthy, well groomed skin is genuinely attractive.

Soap and water should be vigorously applied but no soap left on the skin after bathing.
