The Stability of a Century

The mere mention of a hundred years of successful business carries with it a thought of stability.
Particularly is this true of a bank.
And nothing is more eagerly sought by the depositor in establishing a banking connection than strength and firmness.
This institution has just passed its hundredth birthday.
In the century just closed it has safeguarded every dollar entrusted to its keeping and preserved the confidence reposed in it.
Through its paid in capital, surplus and profits and stockholders' liability it secures with a million dollars every dollar deposited.
It is that stability which we offer to every person in and about Harrisburg who opens an account at this bank—no matter how large or how small that account may be.

SEA MINES IN WARFARE
The Result When a Vessel Strikes One of These Deadly Engines
To merchantmen, to the smaller and older warships—to everything that floats, except the very highest and more recent products of the shipbuilder's art—the mine presents the danger of complete and almost instant annihilation. The rigidity of the ship is itself an element of danger, for the water surrounding it is incompressible. If the skin and frame could give way without rupture and permit the enormously expanding gases (2,000 times the volume of the solid explosive) to transmit their energy in such a way as simply to push the ship aside and thus find a way to the surface, the damage might be slight.
