### IS NO TIME LIMIT ON FOOD

That's What the Commission to Investigate Cold Storage Says in Its Report to the Assembly

The report of the Commission to Investigate Cold Storage created by the 1913 Legislature will be filed with the General Assembly to-night. No bill to regulate cold storage is recommended, for the reason that the resolution creating the Commission did not empower it to draft legislation.

According to the report, the Commission found that the fixing of arbitrary time limits in regard to the keeping of food in storage means less to the consumer than the condition of the stock when it is handled after it is taken out. The report says:

"It was brought out before the Commission that, instead of a time limit on food, it would be far better to have inspection at warehouses with a view of ascertaining the condition of food when it goes in and its condition when taken out."

No conspiracy between the cold storage warehouses and the merchants for the purpose of increasing the price of goods to the detriment of the consumer was found. The report states that the warehouse men are merely custodians of property placed in their possession and under no condition do they profit by reason of the abnormal prices of eggs or any other food commodity given to them for preservation. The fact that cold storage facilities of the big concerns are open to any householder is brought out as proof that no conspiracy to advance the price of foodstuffs is possible.

The final conclusion of the Commission is that legislation on cold storage should be uniform; that when the laws of one State conflict with the laws of another on this subject business is hampered and destroyed; and that no one State should enact a law on cold storage that differs as to time limit and branding from existing acts in other States.

**FUR CAP Baffles THUG**

Stays Force of Blackjack and Holdup Falls

Towanda, Pa., March 15.—A heavy-fur-lined cap which he wore saved J. R. McKeeby, Towanda's oldest merchant, from death at the hands of a highwayman Saturday night. The thug crept up behind McKeeby, struck him on the head with a blackjack and knocked him down, but when the laws of the cap struck the thug's forehead he was frightened away by McKeeby's outcries before he could rob him.

A bad gas was put in McKeeby's head, the thick-fur-lined cap staying the force of the blow sufficiently to prevent more serious injury.

Scranton Claimant Expected to Sue for Divorce Only

Scranton, Pa., March 15.—Setting at rest rumors of an impending settlement of the claims of Mrs. Florence Weeks Mayo, of Scranton, upon Virginia J. Mayo, the New Haven millionaire, J. W. Scott, his assistant, has been in New Haven, but denied that he spent Sunday there in a further effort to effect a settlement with the manufacturer.

There is a strong opinion here that the woman will not prosecute Mayo. It is thought that cash settlement will be made, and that Mrs. Mayo will then sue for divorce.

The fourth week of orchard demonstrations to be held throughout the State will begin on Monday next, March 22, under the auspices of the State Agricultural Department. Among those in this section of the State are the following:

Franklin County—E. C. Bowers, demonstrator, Monday, March 22, Harry B. Krots, Mercersburg.

Huntingdon County—J. S. Hochlander, demonstrator, Monday, March 22, O. M. Wright, Calvia, Wednesday, March 24, George P. Iwin, Pennsylvania Furnace.

Northumberland County—G. B. Stichter, demonstrator, Friday, March 26, R. Scott Ammerman, Danville, R. D. 6.

Prof. H. A. Surface, State Economic Zoologist, in charge of the demonstrations, says:

"It should be emphasized that these demonstrations are for the purpose of teaching all of the people of a neighborhood in a practical way the best possible methods of suppressing pests and producing better fruits. The meetings are made public and extensive announcements are made, in order that all interested persons may have an opportunity to attend and see the work done, take specimens that are supposed to be diseased or infested with pests, ask questions concerning them, as well as on other topics, and receive the help that the trained demonstrator can give. The meeting will be held at 1 o'clock on the afternoon of the day mentioned. The inspector will be there rain or shine. If the weather be too bad for the demonstration on that day, it will be postponed until the next. It is not the purpose of the meeting to furnish lunch to visitors, but to give them access to the premises, with an opportunity to learn just how the work is done that has resulted in such remarkable returns for Pennsylvania fruit and has raised this State from the rank of seventh to second in the rank of fruit production within but a few years.

"Whenever premises are quarantined against foot and mouth disease the public demonstration will be postponed until further notice."

His request for money with which to return to Adams county immediately was complied with by his wife.

Frior, in his message, declared that he cannot account for his strange trip, saying that his mind was "blank" soon after he arrived in Baltimore a fortnight ago on a mission to buy Easter supplies for his store. He added that he may have fallen a victim of aphasia or "sleepy-headedness" although he strongly intimated his belief that thugs drugged him. He had \$60 in his purse upon arriving in Baltimore but when assisted from the dredge at Jacksonville early last week, he had not a cent.

### WHEN IS GARDEN GROUND READY FOR PLANTING?

Average Backyard Soil Poor But Housewife May Get Good Results If Careful Attention Is Given Its Preparation in Spring

Washington, D. C., March 15.—"When is the proper time for preparing to plant one's garden?"

The United States Department of Agriculture's specialists say that in spring as soon as the soil has dried so that a handful when grasped in the hand and gripped by the fingers will slowly fall apart upon being released, it is in a fit mechanical condition to prepare for planting. Clay or heavy soils should never be worked while wet. More injury may be done by doing this than can be overcome in several years of careful culture.

When the soil is found dry, as described above, the upper three inches should be made fine by the use of the hoe and steel-tooth rake; all rubbish, stones, and clods should be removed and the surface made even, somewhat compact, and as level as the contour of the area will permit. It may then be marked off for planting in conformity to the general plan of the garden.

Much of the soil in the average backyard is not only poor in plant food and deficient in decaying vegetable matter, but it is hard and unyielding. However, such is the basis which many a housewife or child has to use for the making of a garden. Teachers who plan school gardens for their pupils also have similar conditions to meet. Therefore, in order to get good results, careful attention must be given to the preparation of the soil.

Soils which are naturally moist are likely to be sour and so not in the best condition for the crop. Whether sour or not it will be well to have the pupils test them, which can be done as follows: Secure from a drug store a piece of litmus paper; then take a handful of soil, slightly moistened and place the paper on it. If the soil is acid, the paper will turn red. To correct such a condition lime should be used. Cover the ground with a thin coat of air-slaked lime, which can probably be secured nearby at small cost, and work this in well. The use of the lime, while not a plant food, will correct the acidity and will improve the physical condition of the soil.

If the soil is clayey or a stiff clay loam and the location is in a section where severe freezing occurs, it will be found a decided advantage to give the area a heavy dressing of decomposed manure in the autumn, and before freezing weather sets in spade the land so as to turn the manure under and leave the soil in a rough, lumpy condition so as to secure the benefit of the digestive action of the winter freezes in reducing the soil. This should be repeated annually at the next fall, if the soil is light and sandy, a mulch of manure may be spread over it in the fall and the spading delayed until spring.

In localities where the soil does not freeze, the manure may be applied in the autumn, and the soil repeatedly spaded during the winter whenever it is dry enough to be worked. The value of freezing at the north can to an extent be attained by the use of spacings at the south. The one general precaution which should always be observed is never stir the soil while it is wet.

**A Simple Way To Remove Dandruff**

There is one sure way that has never failed to remove dandruff at once, and that is to dissolve it, then you destroy it entirely. To do this, just get about four ounces of plain, common liquid arvon from any drug store (this is all you will need, apply it at night when retiring; use enough to moisten the scalp and rub it in gently with the finger tips.

By morning most, if not all, of your dandruff will be gone, and three or four more applications will completely dissolve and entirely destroy every single sign and trace of it, no matter how much dandruff you may have.

You will find all itching and digging of the scalp will stop instantly and your hair will be fluffy, lustrous, glossy, silky and soft, and look and feel a hundred times better.—Adv.

### WHAT CATARRH IS

It has been said that every third person is troubled with catarrh in some form.

Science has shown that nasal catarrh indicates a weakened condition of the body; that the secretion of the mucous membranes are quickly affected, and local treatments in the form of snuffs and vapors do little, if any good.

To correct catarrh you should treat its cause by enriching your blood with the oil-food in Scott's Emulsion which is a medicinal food and a building-tonic, free from alcohol or any harmful drugs. Try it.
