JAMES M. LAMBERTON

James M. Lamberton, whose death occurred yesterday, could be regarded as an example of the highest type of Harrisburg citizenship. He was born here and lived here and worked here. He loved Harrisburg and Harrisburg loved him.

Mr. Lamberton was a gentleman, literally. He was kind and courteous and generous indiscriminately and without thought of return for his generosity. His cheerful spirit, even through the period of his great suffering in the last two years, was a revelation and an inspiration to those inclined to quit in despair the hard battle of life.

Mr. Lamberton gained unusual distinction as a lawyer, teacher and historian. He was a ceaseless worker,-thorough, untiring and accurate. He had a statistical mind and delighted in compiling data on historical subjects in which he or his friends were interested, particularly in connection with his activities as secretary of the famous Yale class of 1878 of which his friend, former President Taft, was a member, and as a member of the Dauphin County Historical Society.

Had he concentrated his rare mental attainments in the direction of amassing great wealth he doubtless would have succeeded, but he preferred to give most of his effort to the service of his friends, persons and institutions whom he loved.

Many distinctions had been won by Mr. Lamberton in city, state and nation, through the various activities that have made up his busy life, and many honors have been bestowed upon him, but Harrisburg, which knows him best, honors and loves him most for his traits of personal character. These perhaps can best be summed up in the one word,unselfishness.

PROSPECTS SOUTH OF THE ISTHMUS

Efforts to increase commercial activities between this country and the Latin-American republics have been exerted with some enthusiasm since the war interfered with steady European trade. The Pan-American Society has been of assistance in showing the way. Trips like that made by former Senator Root some years ago have had their influence in establishing cordial relations between the Englishspeaking and the Spanish-speaking Americans. It is only to be deplored that this country did not sooner awaken to a realization of the advantages of extensive commercial relations with the Latin republics, that it did not see the opportunities south of the isthmus before European nations saw them and seized upon them.

The people of the United States have in past years been so intent upon developing their own vast resources, and establishing and encouraging their own industries, that they have paid little attention to South American trade except such as has come their way of its own accord. While Americans have been content to make no special efforts to extend their commercial activities to the vast terriory lying on the other side of their "Big Ditch, hrifty Europeans have been supplying capital to develop South American fields, providing facilities or commercial exchange, adapting their goods to the peculiar needs of the republics, making suitable erms of credit and employing agents to get 'the

There may, of course, have been little incentive r our business men to endeavor to open new marets for their goods in South America years ago, ven had they seen the opportunities as plainly as uropeans seem to have seen them. This country's nanufacturers were fully occupied with domestic

markets, and they perhaps would have found South American trade too venturesome a business for their comfort. That they missed great opportunities by letting the Europeans get the commerce is evident.

These opportunities many times multiplied are again offered to them, however, through war's interference with Old World industries, and, it seems are not this time to be overlooked.

THE "KID COP" TO BE NO MORE

The old-fashioned truant officer, ogre to frequently-absent school children, is fast disappearing. they sported red carnations and another much. It has investigated and ought to know.

When the old-fashioned truant officer is no more there will be cause for general juvenile rejoicing. the lads with admiration. He will be missed by the school children of the land, but not sadly missed. His absence will to them be his one great merit.

The truant officer of these many years of compulsory education in America has been in the eyes ment when the Legislature is in session of the school children with whom he has had to and has been holding down the place deal, their much feared antagonist. Variously cated in the small one story side addistyled as "kid cop," and "hooky catcher," he has tion to the Senate wing, and in the not been respected by unruly public school pupils rack were all of the Senators' shaving as a school authority should be respected.

as a school authority should be respected.

His place is now being taken, according to the government authorities, by the modern truant officer. The latter makes it his business not so much to "catch" truants as to investigate the causes of truancy in individual cases and to remedy so far as possible the unfavorable conditions which he finds existing. The officers of the new type try to gain the confidence, the respect and even the love of the children, and it seems have been making on the stand were many toilet articles, and yet the only thing than the at twest lows that was not all that was lost. Some bad men got sight of those fancy shaving mugs and they pocketed about a dozen of them, along with brushes, combs and a few other things. As everybody was very much excited, it was an easy matter for thieves to take the three possible than the confidence, the respect and even the love whatever came handy. After the fire the small wing was almost whole, and of the children, and it seems have been making the small wing was almost whole, and some progress in removing prejudices against truant some progress in removing prejudices against truant officers as a class.

Truancy, or what is more familiarly known as "playing hooky," is an offense which must be seriously dealt with, in this country's plans of compulsory education. Yet truants themselves are not always at fault. Sometimes their parents and their home conditions are to blame. In such cases the task of the truant officer is difficult. He must be a real diplomat if he is to remedy matters. He must be an entirely different person from the paddlewielding "kid cop" of the comic supplements.

With eggs down to 20 cents the Easter bunny ought to get right busy this week.

Many a bonnet that will be bought for Easter will not be paid for by Fourth of July.

Why is it necessary for submarines, in practice, to take

Harry Baker and Senate Librarian Herman P. Miller are yet connected with the Senate.

Gettysburg Book in Demand

From all parts of the United States have come requests for the report of the Pennsylvania Commission on the Fiftieth Anniversary of Gettysburg Battle Reuaion, but the edition of 10, 000 was soon exhausted, and a great many people were disappointed. The report, as prepared by Colonel Lewis M. Beitler, secretary of the Commis-sion, is one of the most complete ever printed by the State. Colonel Reitle ook his time in its preparation, and that is one of its charms. From the very inception of the Commission Colonel Beitler has made a faithful and accurate record, and this, of course, includes what took place at the reunion all told most interestingly. The many pictures in the volume are of the high est order of merit, depicting scenes during the reunion, portraits of those who took part, historic spots on the field, camp scenes and a hundred and one other interesting subjects. Colonel Beitler will prepare the second edition personally, which means that the work will be thorough. But the 12,000 new edition authorized will hardly be sufficient to supply the demand for what is considered one of the most handsomely printed and bound books ever issued by the State.

Patton and His Pay as Senator 'I was home last week,'' said Sena tor Edward W. Patton, of the Fourth Philadelphia district, "and dropped in

PRINTS EACH MONDAY A PRACTICAL ARTICLE BEARING ON THE "SAFETY FIRST" MOVEMENT OR KINDRED SUBJECTS. PREPARED BY THAT BRANCH OF THE STATE GOVERN-MENT, OF WHICH COMMISSIONER JOHN PRICE JACKSON IS THE HEAD.)

FINANCIAL LOSS FROM ACCIDENTS

The Pennsylvania Department of La bor and Industry has recently made public the results obtained from the tabulation of all of the accident reports which were received by that Departtabulation of all of the accident reports which were received by that Department during 1914. During that year, there were reported to the Department 38,126 accidents, of which 279 were fatal, and approximately 34,000 were of minor seriousness. This, however, does not represent all of the accidents which have occurred in this State during the past year, as accidents which occasion a loss of time of less than two days were not reported, and also does days were not reported, and also does their include those accidents which are not include those accidents which reported to the Department of Mine to the Public Service Commission.

This does not represent the total loss due to accidents, as it does not include the loss to the employers. Whenever an accident occurs, considerable time is lost by all the members of that shop or department, due to the excitement of the accident itself. It is also necessary to replace the injured person, who may be skilled in his particular line, by some one-who is less experienced. In this way, the organization of the establishment is disrupted, production is lessened, and costs are increased. Many manufacturers claim that the monetary

lessened, and costs are increased. Many manufacturers claim that the monetary loss to the industry is almost as great as that to the injured man himself.

Accordingly, it may justly be assumed that industrial accidents cause a loss of over two million dollars yearly in this State.

The total number of days lost by/the injured persons was 426.824. This injured persons was 426.824. This

The total number of days lost by/the injured persons was 425,824. This represents an average loss of time for each person injured of approximately 12 days. The reports reveal the fact that 64,076 persons were actually dependent upon the wage-earners injured for their livelihood; so that, in reality, the income of 100,000 persons was temporarily affected by these reported accidents. In other words, one person out of every 77 living in this Commonwealth has been directly affected by these accidents. To what extent other dependence are affected by these and ordinates are affected by these and ordinates are strongly affected by the strongly affect

partment may be orienly summarized as follows:

Instructions were given for the removal of approximately 5,000, setserws; for the installation of approximately 75,000 guards for the installation of approximately 400 toilets; for the installation of approximately 275 dressing rooms for women; approximately 6,000 instructions were is sued regarding sanitation. In all, over 50,000 inspections were made in various establishments throughout the State, and the improvements and corrections as a result of these inspections surely will prove of great value for the coming year.

During the past year the Industrial and in fact all persons interested in Board has been extremely busy formulating standard rules and regulations concerning the guarding of machinery and all dangerous places. On February and all dangerous places. the following standards became et
