TOWELS

German and English huck towels, hemmed and hemstitched (no advance in price), 25c

Turkish towels, white and colored borders, 25c

HIDDEN WEALTH

Why It Is Always Wise to Analyze the Earth When Digging

Material thrown up by burrowing animals or exposed in digging or plowing, and, of course, railway cuttings or any excavations should be carefully examined for the presence or indications of useful minerals. Fallen stones, especially carried down by rivers, should be carefully inspected, and if any stones of a promising character such as vein rock, which are known as shale stones, be found, the inspection should be continued up the river or the valley. The main may be many miles or only a few feet away from where the stones that belong to the vein now are.

A vein rock usually is of a different degree of hardness to the surrounding rock. It is harder than the surrounding materials. In weathering the outcrop is marked by projecting masses of rocks or depressions, which may be followed by the eye for some distance marking a vein.

These outcrops should be examined to see if they contain any useful mineral or indications of them. If the outcrop presents a spongy looking mass, stained with dark and other hues of brown, it gives a favorable indication. This mineral is called gossan and is a favorable indication of rich minerals lying underneath.—Chicago Herald.

A STORY THAT VARIES

The Bride Who Got Into a Chest and Was Found Dead There

There is a story more or less diffused of a young bride on her wedding day playing the game of hide and seek and concealing herself in one of those ancient carved chests of large size. After she had got in the lid closed, and she found herself unable to raise it again, for it fastened with a spring, and she was shut in. Search was made for her in every quarter but the right one, and great perplexity and dismay were caused by her disappearance. It was not till years after, when chance led to the opening of the chest, that the body of the young bride was discovered and the mystery of her disappearance solved.

The story is found in so many places that it may be questioned whether it is true of any one of them. Rogers tells it of a palace in Modena. The chest in which the poor bride was found is shown at Bramshill, in Hampshire, the residence of Sir John Cope. Another similar chest, with precisely the same story attached to it, was long shown at Marwell Old Hall, between Winchester and Bishop's Waltham.

The folk tale of Catskin or Peau d'Ane represents the girl flying with her bridal dresses from a marriage that is repugnant to her, and, as this tale is found all over Europe, it may have metamorphosed itself in that of the bride who got into a chest and died there.—Cornhill Magazine.

Buddha

The origin of Buddhism which ranks in numbers among the great religions of the world, is wrapped in much uncertainty, and the personality of its founder is more or less obscure. It is generally believed that Buddha was a prince of a petty Indian nation and that he was born about the beginning of the fifth century before Christ. He was named Siddhartha and was also known as Sakya, his family name. The title Buddha, which was given him, means "the enlightened." He spent many years in study and solitary meditation and finally evolved the philosophy which he preached for over forty years in northern India. He was about eighty when he died.—Youth's Companion.

Tuning Forks

The tuning fork was the invention of John Stone, royal trumpeter, in 1811. Though the pitch of forks varies slightly with changes of the temperature or by rust, they are the most accurate means of determining pitch. Tuning forks are capable of being made of any pitch within certain limits, but those commonly used are the notes A and C, giving the sounds represented by the second and third spaces in the treble staff.

His Walking War Record

The Dundee Courier has this laconic war note: "Soldiers can be as laconic as sailors. The late Sir George Groves went to tell of an old soldier who went about begging, bearing a placard: 'Actions, 7; wounds, 8; children, 8; total, 24.'"

Fixing the Broken

"They were both broken up by their separation." "But I understand they've effected a reconciliation and are now repaired."

HARVEY AND THE BLOOD

How His Theory of Circulation Was Born and Demonstrated

It was while studying at Padua under a professor who had discovered the valves in the veins that Harvey discovered the circulation of the blood. He was curious to know what these valves were for and finding that they all pointed in the same direction, he could think of no reason for their existence unless it might be to prevent the blood from flowing backward.

Placing a ligature on his arm, he found that one set of vessels, the arteries, became distended with blood on the side nearest to the heart, while the veins became distended with blood on the side farthest from the heart. This to him meant only that the blood flowed from the heart through the arteries and back to the heart through the veins. It also explained the beating of the heart and the throbbing of the pulses.

But the medical and surgical world received this epoch making discovery with scorn. Harvey published a book on his discovery and his practice fell off considerably. Doctors scoffed, and the public looked on him as a crank. It was a quarter of a century after

the book appeared before the discovery was accepted by the learned men of the world.—New York World.

The Dumb Waiter

The value of the old fashioned labor saving device, the dumb waiter, cannot be exaggerated. Instead of carrying up the many, many things that daily have to come from the cellar they are placed on the dumb waiter. No energy is wasted and one trip will save three. It serves the place also of the more modern linen chute. The linen chute is not to be taboored, for it has its uses but it is practically wasting space to have both it and the dumb waiter. In many houses the dumb waiter stops short at the second floor—the reason why has never been discovered—or sometimes it starts at the first floor instead of in the cellar, another enigma. This is as impractical as it would be to have the sidewalk end before it reaches the house. It simply doesn't answer the purpose for which it was intended.—Woman's Home Companion.

It is a good plan neither to borrow nor lend where trouble is concerned.—New York Times.
