VINEYLAND. TO ALL WANTING FARMS. New Settlement of Vineland. A REMEDY FOR HARD TIMES. A Rare Opportunity in the Best Market, and Most Delightful and Healthful Climate in the Union.

It consists of 20,000 acres of GOOD land, divided into Farms of different sizes to suit the purchaser—from 20 ACRES and upwards—and is sold at the rate of from \$15 to \$20 per acre for the farm land, payable one-fourth cash, and the balance by quarterly installments, with legal interest, within the term of four years.

The Soil is, in great part, a Rich Clay Loam, suitable for Wheat, Grass and Potatoes—also a dark and rich sandy loam, suitable for corn, sweet-potatoes, tobacco, all kinds of vegetables and root crops, and the finest varieties of fruit, such as Grapes, Peaches, Apples, Nectarines, Blackberries, Melons and other fruits, best adapted to the Philadelphia and New York Markets.

Persons Wanting a change of Climate for Health, would be much benefited in Vineland. The mildness of the climate and its bracing influence, makes it excellent for all pulmonary affections, dyspepsia or general debility. Visitors will notice a difference in a few days. Chills and fevers are unknown.

Report of Selon Robinson, OF THE NEW YORK TRIBUNE, UPON THE VINELAND SETTLEMENT. The following is an extract from the report of Selon Robinson, Esq., published in the New York Tribune, in reference to Vineland. All persons can read this report with interest.

Advantages of Farming near Home—Vineland—Remarks upon Marl—Soil its great Fertility—The Cause of Fertility—Amount of Crops Produced—Practical Evidence. It is certainly one of the most extensive fertile tracts, in an almost level position, and suitable condition for pleasant farming that we know of this side of the western prairies.

The geologist would soon discover the cause of this continued fertility. The whole country is a marine deposit, and all through the soil we found evidences of calcareous substances, generally in the form of indurated calcareous marl, showing many distinct forms of ancient shells, of the tertiary formation; and this marly substance is scattered all through the soil, in a very comminuted form, and in the exact condition most easily assimilated by such plants the farmer desires to cultivate.

Marl, in all its forms, has been used to fertilize crops in England, from the time it was occupied by the Romans; and in France and Germany, and that bed is counted on as a valuable bed of manure, that can be dug and carted and spread over the field.—How much more valuable than it must be, when found already mixed through the soil, where new particles will be turned up and exposed, and where the owner's use every time he sows the earth.

Having then satisfied our minds of the cause, they will not be excited with wonder at seeing indubitable evidence of fertility in a soil which in other situations, having the same general characteristics or at least appearances, is entirely unproductive except as its productivity is promoted by artificial fertilization.

A few words about the quality and value of this land for cultivation, of which we have some strong proof. Our first visit was to William D. Wilson, Franklin township, Gloucester county, who purchased some eight miles north of Millville, about three years ago for the purpose of establishing a steam mill, to work up the timber into lumber, to send off by the new railroad, as well as the firewood and coal, for which he built a branch track a mile and a half long. He also furnished sixteen miles of road with ties, and has no doubt made the mill profitable, though his main object was to open a farm, having become convinced that the soil was valuable for cultivation.

Mr. Wilson's growing crops, and the wheat stubble of the present season, all indicate his land as productive as any part of the State. At Mary Barrow's, an old style Jersey woman farmer, several miles south of Mr. Wilson's, we were so particularly struck with the fine appearance of a field of corn, that we stopped to inquire of the hired man how it was produced. We found that the land had been the year but one before in wheat, and spring plowed once, with one "poor old nag," and planted with corn.

Our next visit was to the large farm of Andrew Sharp, five miles north of Millville, from half to a mile east of the railroad, and just about in the centre of Vineland. Mr. Sharp commenced work here in December, 1858, upon 270 acres. In less than three years, he has got 234 acres cleared and in crops this season, as well enclosed and divided into several fields, with cedar rail or pole fence; has built a two-story dwelling, about 36 by 40 feet, and a smaller house for farm laborers, and a stable and granary and some other out buildings.

Considerable part of the land was cleared for the plow at \$9 an acre, and on some of it the first crop was buckwheat, limed with 50 bushels in powder per acre. This crop may be put in July 4th to 20th, and yields 20 to 30 bushels per acre, harvested in November; when the land being sowed with 150lbs of Peruvian guano and seeded with rye, yielded 12 to 15 bushels per acre and \$10 worth of straw. The rye stubble turned, after knocking off a large growth of oak sprouts, and dressed again with guano and seeded to wheat, gave 15 or 16 bushels. The crop which he was threshing while we were there promises more of a very plump grain, and the straw is very heavy.

Other portions have been planted with corn as a first crop, which yielded 80 bushels of yellow 3rd corn, and the second crop 40 bushels, and the third crop, treated to 150lbs. of guano, we are sure no one would estimate below 40 bushels per acre. [The reader will recollect that the writer is now speaking of land perfectly new, and which can scarcely be considered in good arable condition—Ed.]
