Riches do not insure wealth. Call any man what he is and it makes

When a man attempts to freeze you out, freeze right back.

or short by his beliefs.

The blind cry for light and declare the fallacy of the belief in its existence. If you whip a boy, he will hate you; you don't whip him, you will hate

A man's acts are the shadows cast long

A man finds his warmest welcome at ne place where he spends the most

Some people imagine that the world stands still until it has heard their side of the story.

The bigger fool a stranger in town is, the more money he usually has on him to be robbed of.

He that buildeth a bridge shall walk on it, he and his posterity. Therefore tet him look well to its support.

There is nothing unlovely about love save the process of unloving, and unhap-piness is half happy until deprived of

It is unfortunate that people do not have the same faculty for getting out of trouble that they have for getting out of Some men put the brush in the hands

of their enemies and then complain that they are not as black as they are After the first baby has arrived in a family a man can't kiss his wife without waiting for her to take a lot of pins out

of her mouth. Men neglect little things every day that cause them worry at night. It is a bad custom, but we don't suppose there is any use saying anything.

Find the cause of each wrinkle on a man's face and you will find it was put there by worrying over something that worrying could not help.

Easy Cure of Wasoping Cough.

A medical man at the city of Aix-en-Provence has a son who had been suffer-ing from whooping cough. One day the son told him that at school the teacher of chemistry had evaporated some naphthaline and that the fumes had immediately suppressed the irritation of the throat that would have made him cough. In order to remove the fumes a window had been opened, after which the whooping cough had come on again. The doctor evaporated naphthaline by the bedside of the boy, who felt much relieved and went to sleep. The next morning the cough was much better. The same was done again on the night The same was done again on the night following, after which the patient was entirely cured of his cough. Then the doctor himself was afflicted with a whooping cough. He tried the same means and was cured on the third day. he ans and was circed on the tarria day.

He then proceeded to employ the remedy
and had great success. At a boardinghouse thirty persons were seized with
whooping cough and had the anaphthaline
vapors applied. It cured all except two nuns, who could not stand the vapor, as they were afflicted with tuberculosis. Place fifteen to twenty grams in an earthenware mortar and place on red hot coal, heating it slowly. Remain in the room filled with smoke for about twenty minutes. Although it seems suffocating, it is considered altogether innocuous .-

Cleaning Buildings by Sand Blast.

The exterior of buildings is new cleaned by the sand blast. The front is covered with staging, and the blast is applied by a system of pipes and nozzles carried by the workmen. The stream of fine sand issuing from a nozzle removes a layer 1-64 inch thick from the surface of the stone, and a square foot of surface can be cleaned in ten minates. The sand can be employed over again. -London Tit-Bits.

Dyspepsia

rapidly; lost all appetite and ambition, and barely dragged along with my work. During the winter and spring had to have help

Could Not Eat Vegetables or meat, and at last so that I could not even use butter on my toast. Used to dip the toast in tea and even then it would distress my stomach. In the spring I hired a girl perma-nently, my health was so poor. She tried to persuade me to take Hood's Sarsaparilla, as a lady for whom she had worked had been great-ly benefited by it. She said: 'It will only cost a dollar to try it.'

I Dragged Along

Hood's Sarsaparilla MRS. WILLIAM LORD, 101 Van Buren

NOTES ON THE VEGETABLE GABDEN

Oftentimes very little forethought is given to the plan of the vegetable garden, and yet it is one of the most im-

feet and a half in the row. Some might think the distance too great, but with

the large varieties, such as the Acme, Trophy and Livingston, the ground will be pretty thoroughly covered at the time of maturity. With plenty of room it is possible to secure large, well-ripened

Cabbage needs less room. Rows two

and one-half feet apart in the row for tory distance.

All plants of the garden should be so

put out as to make horse cultivation in

put out as to make horse cultivation in part, at least, available.

The value of potting plants to secure a good set of roots, cannot be overestimated. All who have tried it regard the plan most favorably. Plants put in pots should not be left too long, for in that case the roots become cramped, and that is a detriment rather than an aid to its growth.—American Farmer.

Keep the cattle off the plowed land.

Parker Earle is generally conceded to be an excellent strawberry.

furnished to ewes in milk.

early.

as the ground can be prepared. The Souvenir de Congres pear is large in size, good in quality and matures

them thoroughly before feeding.

Plenty of water and grain should be

On a medium sized farm a pair of steers may be raised with no great trou-ble or expense. So may colts, indeed, but the steers will never carry the boys to the racecourse. Let their training be the boys' pastime and pride. The steers will grow up between the boys and the city. Boys who have a little voke of ble or expense. So may colts, indeed, but the steers will never carry the boys to the racecourse. Let their training be the boys' pastime and pride. The steers will grow up between the boys and the city. Boys who have a little yoke of steers, and a little cart, a little sled, and a little stoneboat, all of their own manufacture, will not pine to forsake the farm. Before the boys are men, the steers may be great, powerful oxen, well able to perform a kind of labor always in demand.—Hartford (Conn.) Times.

A PLUM ORCHARD.

No doubt a plum orchard will be a profitable investment if it is taken care of as it should be. The trees are set the formula of the product of the most important considerations connected with gardening. The great object should be to plant in such a manner as to facilitate the use of all horse-power possible. Very few farmers find much time to use the hoe, while many of the gardens are so planted as to admit of no other means of cultivation. In the hands of many the hoe is not the best cultivator; it does not have the desired effect of loosening the soil, and is often good only in finishing up after the plow. For many plants the soil needs to be deeply and thor oughly dug. Frequent stirring prevents a crust forming, which is so detrimental to plant in such a manner as to facilitate the use of all horse-power possible. Very few farmers find much time to use the bee, while many of the gardening. The great object should be to plant in such a manner as to facilitate the use of all horse-power possible. Very few farmers find much time to use the use of all horse-power possible. Very few farmers find much time to use the use of all horse-power possible. Very few farmers find much time to use the use of all horse-power possible. Very few farmers find much time to use the use of all horse-power possible. Very few farmers find much time to use the use o

A PLUM ORCHARD.

No doubt a plum orchard will be a profitable investment if it is taken care of as it should be. The trees are set eighteen feet apart, and some good kinds are the Lombard, Green Gage, Yellow Egg, German Prune, Damson, and Jefferson, with some others of local reputation. Wood ashes or lime is an excellent fertilizer, and to prevent damage from the only dangerous insect enemy, the curcullo, which is such a persistent enemy of the plum that it is almost impossible to grow this fuit unless the fowls are kept among the trees, or the fowls are kept among the trees, or the fowls are sprayed with Paris green. One hundred and thirty trees may be planted on an acre at the distance mentioxed.—New York Times. of plants. Too wet to plow corn, means too wet to stir the garden.

Plants that have been grown in a hotbed should be transplanted in rows in the open air before being set out, and given protection from the sun and drying winds until they become well established. By this method of management they grow more stecky, and make healthier and larger growth in the garden.

For most vegetables the long row system will be found best. Tomato plants ought to have a distance between rows of about three feet and a half, and two feet and a half in the row. Some might

ROSEBUG BAIT.

ROSEBUG BAIT.

The object in planting spireas in the vineyard or garden where grapevines are growing is for the purpose of attracting the rosebug or rose beetle. This insect, as is well known, is very fond of the flowers of the grape and will soon destroy them, and thereby cut off the crop of fruit; but they are also very fond of and seem to prefer the flowers of certain species of the spirea. They will usually desert the grapes, and cluster upon the spireas if afforded an opportunity, and, as these shrubs and herbaceous plants cost little or nothing, we may use them freely as bug traps or bait, and from which the insects may be shaken daily into hot water or a little kerosene and water. The two best species of the spicea for this purpose are the Sorbusleaved, a hardy, early-blooming shrub from Siberia, and the Goats-beard, a native vigorous growing herbaceous native vigorous growing herbaceous species. There are also several Japan species, with fine white flowers, and blooming at the same season as the grape that may also be employed for the same purpose, but the two we have named

seem to answer every purpose. - Ameri can Agriculturist. HELPFUL HINTS FOR BERRY GROWERS In setting out new beds of raspberries or blackberries cut back the canes to about six inches above the surface of the soil. Throw all the strength in the plant and get a good sturdy cane this season for next year's fruiting. Plant as early in the season as possible, while plants are downer.

are dormant.

When setting strawberries in spring cut back the roots one-third with a sharp knife; this starts a new fibrous growth quickly. Let the soil be rich and deep.

When strawberry plants are received ning to run about should be fed regularly every day.

If the egg shells are fed to the poultry, care should always be taken to crush and it is not convenient to plant at once, let them remain in their packing of moss out under a tree or shady place in the

light. Current cuttings ought to be set so that the top bud of the cutting is on a level with the surface of the ground.

Prune bearing currant bushes, cutting back last year's growth. The fruit is borne on wood of two years old and more, and the cutting back develops the lower buds and causes larger fruit. Remove all old, unproductive wood and thin out so as to admit light and air freely into the centre of the bush.—

A hen pays in proportion to the number of eggs she produces; therefore it is an item to feed so as to secure plenty of

freely into the centre of the bush .-- Orchard and Garden.

In shipping young poultry at this time see that they are well watered and fed before cooping, and do not crowd too many into the coops. So far as is possible early planting is the best, but it is no advantage to set out trees or plants until the soil is in a out trees or plants until the soil is in a condition to work into a good tilth.

When desired to fatten rapidly there is nothing that will equal good corn meal. Fowls should be given all that greens; these can be set in the mud and | they will eat up clean. will grow and be none the worse for it.

A good plan with all trees and plants is plucking, upon an average of one pound have a bucket or tub of water con-nient and dip the roots of the plants mon geese per annum. venient and dip the roots of the plants carefully into this so as to wet the roots venient and dip the roots of the plants carefully into this so as to wet the roots thoroughly. Before doing this all of the bruised or damaged roots should be cut off and the top cut back in proportion to the roots. Two men can set out trees to the best advantage; one to hold the tree and work the soil in among the roots with the fingers and the other to find and shovel in the dirt as needed. No kind of manure should be applied so as to come in direct contact with the roots. If the soil is not naturally rich the best plan of applying manure is to work it thoroughly in with the soil be-

secured by any other than a persistent framping and crowding by faithful help. The advocates of not tramping say that it might be obtained by the use of some nots. It is important to tramp the soil well after the roots are covered, so as to keep the tree firm, or the winds we usually have in the spring will tend to loosen it. If necessary to stake, when the tree is set out is a good time to set the stake. A piece of rubber shoe or boot put around the tree where the cord is fastened will aid materially to lessen the risks of injury by chafing. Wool twine will be less libble to injure the trees than hard twisted hemp twine. Set the trees at the same depth that they grow in the nursery.

With plants grown either in the hothed or seed-box, care should be taken to harden them off before transplanting. If the soil is dry, a good plan is to water the plants thoroughly an hour or two before transplanting, and the plants that the plants down to the first leaf. This can be considered a safe rule with all plants, and if the plants have made a long, spindling growth even deeper ectting than this will be advisable. It is maportant to see that the soil comes ru close contact with the roots. Cenerally with all garden plants it will be advisable. It is maportant to see that the soil comes ru close contact with the roots. Cenerally with all garden plants it will be advisable. PHYSICIANS WHO TREATED SUANT

-THE MOST MARVELOUS CASE
IN THE HISTORY OF MEDICAL SCIENCE.

A few weeks ago an article appeared in this paper copied from the Albany, N. Y., Journal, giving the particulars of one of the most remarkable cures of the 19th century. The article was under the heading "A Saratoga Co. Miracle," and excited such wides read comment that another Albany.

The article was under the heading "A Saratoga Co. Miracle," and excited such widespread comment that another Albany paper—the Express—letailed a reporter to make a thorough investigation of the statements appearing in the Journal's article. The facts as elicited by the Express reporter are given in the following article, which appeared in that paper on April 16th, and makes one of the most interesting stories ever related:

A few weeks ago there was published in the Albany Evening Journal the story of a most remarkable—indeed so remarkable as to well justify the term "miraculous"—cure of a severe case of locomotor ataxia, or creeping paralysis, simply by the use of Pink Pills for Pale People, and, in complyance with instructions, an Express Reporter has been devoting some time in a critical investigation of the real facts of the case.

The story of the wonderful cure of Charles A. Quant, of Galway, Saratoga Courty, N. Y., as first told in the Journal, has been copied into hundreds if not thousands of other daily and weekly newspapers and has created such a sensation throughout the entire country, that it was deemed a duty due all the people, and especially the thousands of similarly afflicted, that the statements of the case as made in the Albany Journal, and copied into so many other newspapers should, if true, be verified; or, if false, exposed as an imposition upon public credulity.

The result of the Express reporter's investigations authorizes him in saving that

newspapers should, if true, be verified; or, if false, exposed as an imposition upon public credulity.

The result of the Express reporter's investigations authorizes him in saying that the story of Charles A. Quant's cure of locomotor ataxia by the use of Pink Pills for Pale People, a popular remedy prepared and put up by the Dr. Williams Medicine Company, Morristown, N. Y., and Brockville, Ontario, 18 TRUE, and that all its statements are not only justified but verified by the fuller development of the further facts of the case.

Perhaps the readers of the Express are not all of them fully familiar with the details of this miraculous restoration to health of a man who after weeks and months of treatment by the most skillful doctors in two of the best hospitals in the State of New York—the Roosevelt Hospital in New York City and St. Peter's Hospital-in Albany—was dismissed from each as incurable and, because the case was deemed incurable, the man was denied admission into several others to which application was made in his behalf. The story as told by Mr. Quant himself and published in the Albany Journal, is as follows:

"My name is Charles A. Quant; I am 37 years old; I was born in the village of Gal-

stands of the solventile protection to bealth of the universities rectoration to bealth of the universities rectorated to be all the third of the

ROOSEVELT HOSPITAL

Mondaya, Wednesdaya and Fridaya.

To verify Mr. Quant's statement our reporter a few days ago, (March 31st, 1892,) called on Dr. Allen Starr at his offlee, No. 23 West Twenty-eighth St., New York city. Dr. Starr is house physician of the Roosevelt hospital, situated corner of Ninth avenue and Fitty-ninth street. In reply to inquiry he said he remembered the case of Mr. Quant very well, and treated him some, but that he was chiefly treated and under the more especial care of Dr. Ware. He said he regarded this case as he did all cases of locomotor ataxia as incurable. In order that our reporter might get a copy of the history of the case of Mr. Quant from the hospital record he very courteously gave him a letter of which the following is a copy:—
Dr. M. A. Starr, 22 West Forty-eighth street, office hours, 9 to 12 a. m., New York, March 31st, 1892.—Dear Dr. Vought: If you have any record of a locomotor ataxia by name of Quant, who says he came to the clinic 3 or 4 years ago, No. 14,037, of the O. D. Dopt, Roosevelt, sent to me from Ware, will you let the bearer know. If you have no record send him to Roosevelt Hosp.

Yours, Starm.
By means of this letter access to the records was permitted and a transcript of the history of Mr. Quant's case made from them as follows:
"No. 14,037. Admitted September 16th, 1889, Charles A. Quant, aged 34 years. Born U. S. Married. Hoboken."
"History of the case:—Dyspepsia for past four or five years. About 14 months partial loss of power and numbness in lower extremities. Girdling sensation about abdomen. (November 29th, 1889, not improved, external strobismus of left eye and dilatation; partial ptosis past two weeks in left eye.
"Ord, R. F. Bi pep. and Sola."
These are the marked symptoms of a

An Accommodating Justice.

A Texas journal tells the following court on the border line between Texus and Arkansas: A man was brought before him on charges of murder and horsestealing. Said the Justice: "Do you want to be tried by the Arkansas law or the Texus law? If by the former, I'll set you free for stealing the horse, but hang you for killing the man. If by the Texus law, I'll acquit you for murdering the man, but hang you for stealing the horse."—New York Post.

STATE OF OHIO, CITY OF TOLEDO, [88, LUCAS COUNTY.
