

PATING FOR THE MILK'S QUALITY. The Vermont creameries have adopted the system of paying for milk according to quality, or rather, amount of butter fat in it. In June of last year the poorest dairy received fifty-six cents per hun-dred pounds for milk, and the best one eighty-one cents per hundred pounds. In October last, at this same creamery, the poorest milk brought ninety-two cents, and the best \$1.56 per hundred pounds. Does this not show that it pays the milk producer to keep good cow feed well, and produce a fine quality milk.—American Dairyman.

NITRATE OF SODA FOR TOMATOES

Three years' experiments with nitrate of soda by E. B. Voorhees, of the New Jersey Station (S.B. 1892), show that for tomatoes nitrate of soda alone is superior to either barnyard manure or mineral fertilizers, but is less effective than the complete manure. On and previously liberally fertilized with phosphoric acid and potash, nitrate soda used alone, in small quantities, gave the best and most profitable results. With the small quanprofitable r tity of 160 of 160 pounds of nitrate per acre, second application was advantageous, but 320 pounds per acre was most effective. The soils used were a sandy loam in Southern New Jersey, in a soction largely devoted to raising tomatoes arly markets, and a clay loam in Northern New Jersey. The maximum Northern New Jersey. The maximum yields of tomatoes seen to depend upon a full supply of immediately available nitrogen, but as phosphoric acid and potash are also needed, the farmer should know the capacity of his soil for the crop in order to economically use com-mercial manure — American Aoricultur. mercial manure .-- American Agricultur-

THE SHEEP TAPEWORM.

Sheep are infected by a species of tapeworm which exists in the brain, but tapeworm which exists in the brain, out in its larva stage only. The mature worm inhabits the dog, and it is due to the presence of the dog that sheep be-come infected. Indeed, both animals are necessary to the existence of this perasite, which is known as Cœnurus cere bralis, and also as Hydatus cerebralis because it is enclosed in a watery blad-der which is found in the sheep's brain just under the skull. This creature has several heads, each of which is armed with a circle of hooks by which it is attached to the covering membrane of the brain, and a sucking disk, by which it draws in its nutriment. As it increases in size it causes pressure on the brain, the result of which is a disturbance of the nervous functions and the irregular movements of the animal, which well known to indicate the existence of the parasite in the sheep. The sheep turns around on one side or the other as either side of the brain may be affected by the injury, or if the centre of the brain is affected the sheep raises its head

and stumbles forward. The sheep take in the eggs of the tapeworm that are discharged by the dogs on the grass, and these being swal-lowed are hatched in the sheep's stomach. The young worms then penetrate the tissues into the veins, by which they find their way to the capillaries of the brain, where they lodge and grow to their intermediate stage, often attaining a size of two inches, including the blad. der and its liquid coatents. Some vet-erinarians who have had sufficient ex-perience are able by the symptoms above mentioned to locate the bladders, and either puncture them, and so destroy the worm, when the bladder becomes absorbed without injury, or they open the skull by trepanning and remove the in-truder. When a sheep thus diseased immature worms are swallowed, and ma-ture in the dog, to be voided from time to time in the usual segments, that are filled with eggs, and these are picked up by the sheep. Those under two years old are most subject to the parasite.— New York Times. While kerosene is an irritant, crude petroleum makes a good liniment. It will kill every louse it touches. Use kerosene on the roosts and in the nests and petroleum on the chicks. It is better financiering to pay well for that of a poor one for

LITTLE PLAGUES.

It is a singular fact that the most for-idable enemies of man are among the order to earn a satisfactory interest. Unmidable enemies of man are among the smallest of created things. A devastat-ing storm extending over half a con-will find that "farming don't pay."

suddenly. A solitary Dutchman could have accomplish nothing in attempting to shut out the sea; but when all Holland took hold of the work, the proud waves of old ocean were stayed. It is by co-operation that the ravages of man's in-sect enemies will be terminated or substantially lessened, if at all. Take, for a familiar example, the cur

rant worm. In some localities, where this wholesome fruit was formerly this wholesome truit was formerly grown in large quantities, it has been practically given up on account of the ravages of the worm. Yet this pest is suppressed with very little trouble by the prompt application of white helle-bore. The trouble has been that while one present would do big dury in supone person would do his duty in sup-pressing the worms on his own bushes, his next door neighbor would abandon his to the tender mercies of the worms which were left to breed in peace for an other season's foray on both plantations. If every currant grower in a given local ity would do his whole duty for a sea ity would do his whole duty for a sea-son or two—or three, perhaps, to make sure—the plague would be suppressed

The same co-operative effort would ac-complish great things with many other insect pests. Sometimes it is esential for the State to undertake the work, as in the case of black knot on cherry and plum trees and the gypsy moth in Mas-sachusetts. But much might be accom-plished by combined private enterprise, and it ought to be possible to awaken in every agricultural community a public spirit which would make itself effective for the suppression, so far as possible, of all the "little plagues" that seriously menace the farmer's prosperity .- New York Mail and Express.

FARM AND GARDEN NOTES. Among the best asters are Comet, Queen of the Market and the Diamond. There is a big demand for Newtown

both at home and in the Eng oippins, lish market. Protessor Deman protests against call-ing the pomelo "grape fruit," inasmuch as it bears no resemblance to the grape. Absolute cleanliness is a surer preven-tative of chicken cholera than all the medicines that have ever been invented.

The Erie, Early Cluster and Kittatinny blackberries bring big figures in the New York market on account of their large size. It is told in American Gardening that

persistent spraying will keep the red spider, which flourishes in a dry atmoshere, in check.

The careful driver, who properly values his horse's feet, always uses the dirt road in summer time in preference to the hard turnpike.

Grape vines may be triumed any time during the season of rest, that is, when the foliage is off. Some prune in the fall, some in the early spring.

A well bred colt should double its weight within forty days after foaling. If it does not do this it probably is not receiving sufficient nourishment.

If you want to try an experiment next season, see how much you can make a single acre produce by expending brains, labor and fertilizer upon it without stint. The great point to be observed in the

construction of the silo is that it shall be built so that it will admit no air at any point below the surface of the sil-It is a fact that well-bred animals are

kept in good condition most easily, fatten more rapidly, and hence are the most economically feed. These are the points that make them of value.

BEATEN BISCUIT. A beaten biscuit is a Southern dish. A beaten biscuit is a Southern dish. It calls for two quarts of flour, a tea-spoonful of satt and two heaping table-spoonfuls of lard, and milk enough to make a stiff dough. Flour it and roll it out, then lay it on a stone slab or firm wooden board and pound it with a mallet or large rolling pin. The dough must be pounded one hour, until it rises in blisters and cleaves from the board. There is a machine for pounding this dough to be found in Baltimore, where this is a favorite bread.

VALUABLE IN THE WORKBASKET. Gum-tissue, which is bought by the sheet, will be found a valuable addition to the workbasket for making patches that cannot be detected. Ugly tears that defy the needle in heavy clothing,

cracks in silk, and the fretwork of moths can often be neatly mended by its use. Lay the edges of the torn fabric as close-Lay the edges of the torn hadre as cose-ly together as possible, without drawing them; lay a piece of the tissue on the un-derside, and press with a warm iron. If a small bit of the goods is torn out, patch a bit of new cloth into its place and mend with the gum in the same way. Mending done in this way can be snonged and washed without loosening sponged and washed without loosening the patch.-New York Post.

SHERBETS AND WATER-ICES.

Sherbet in its literal sense means a cool drink. It is of Oriental origin, but in this country it has come to mean a in this country it has come to mean a frozen mixture of fruit, or fruit juice,

water and sugar. There is a distinction, however, made between water-ice and sherbet. Sherbet has, in addition to the fruit

juice and water, either sugar sirup, white of egg, or gelatine, to give it sufficient viscousness to entangle and hold air when beaten in a freezen; so that sherbets un-less colored by the fruit used, will be

white and opaque like snow. Water-ices, on the contrary, are made without the white of egg, sirup or gela-tine, do not entangle air, and are translucent, and what might be called

watery" in appearance. Both sherbets and water-ices are delicious when made with fresh ripe fruits, and both may be enriched by the ad-dition of sweet cream if desired.—St. Louis Republic.

OLD-FASHIONED CHICKEN SOUP.

For real solid nourishment and palatable comfort nothing is so deliciously grateful as an old-fashioned chicken soup—not the broth served to invalids and loathed by the whole human race, but

the rich, yet delicate, rice-thickened, highly peppered chicken soup that our grandmothers always gave us when we went to spend the day with them, and which to this day carries along with its odor the intermingled fragrance of velvet roses and lavender and rue.

For this soup you may take the very oldest and toughest of hens, requiring nothing save that she be very fat. Cover this fowl with cold water and put to simmer in a deep, covered pot over a slow fire. After an hour add half a cup

sow me. After an nour add haft a cup of rice, two Irish potatoes sliced very thin, a lump of butter the size of a tur-key egg, a bunch of thyme and parsley. Boil rapidly until the fowl falls to pieces, then add a cup of cream, pepper and salt to taste and three sliced, hard-boiled are Allanta Constitution boiled eggs.-Atlanta Constitution

HOUSEHOLD HINTS. Almond meal is very softening and

whitening to the skin. Peroxide of hydrogen diluted with amonia will bleach the hair.

Keeping a pan of water in the over will prevent fowl from scorching. Naptha is good for cleaning kid

gloves, but keep it away from the fire. To make the eyebrows grow better rub common salt into them every night before going to bed.

Scratches and bruises may be taken from furniture by using the kernel of a walnut or butternut. Never sweep dust and dirt from one

room to another, nor from upstairs to the lower part of the house. Always take it up in each room. Cranberry sauce or fruit jelly to be

eaten with the meat is placed on the table before the guests take their places and removed during the dinner. In washing black wool goods before making them over use five cents' worth

of soap bark to a pailful of water. Let it stand until cold. Iron on the wrong

GEORGIA GOLD FIELDS.

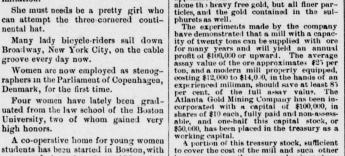

a lo a la Property and Prospects of the Atlanta Gold Mining Co. Fully Described.

TORMONEN

The Property and Prospects of the Atlanta Gold Mining Co. Fully Described. The two articles appearing recently in your journal have called forth such a flood of inquiries in relation to the plans, pros-pects, etc., efc., of the Atlanta Gold Mining Company, that the company has requested your correspondent to answer through the medium of the press the many questions which otherwise would require a score of letter writers. The property upon which the Atlanta Gold Mining Company proposes to begin opera-tions is situated about 3% miles east of Dahloneza, Ga., consists of a forty-acro slightly cast of north by the famous Cal-houn Gold Belt, having on this lot a width of about 150 feet. The entire belt is com-quart, all hearing more or less gold. At different times within the past twenty years more or less mining has been done upon this lot, and while the work has mainly been confined to a very small portion of the vein, and has always been of a cru is and desul-tory character, the returns in gold have been extremely gratifying, and in several instances of sufficient magnitude to put the miners, who, from time to time, have held leases upon the lot, in very strong financial circumstances. The total gold derived work thus far done upon the lot would not under the direction of a competent mining enginer, provided with proper appliances, exceed \$5000, and the total gold derived from this work, covering not over two acres of the forty acres, is considerably over \$60,-00. Chinese silks will be fashionable all The girl proud of her small feet will never go in for the over-gaiters. Hoop earrings of plain gold are more and more the fashionable thing. A great variety of material is utilized Worth, the famous Paris dressmaker, The girl of the period's sunshade stick s almost long enough for a fishing rod. Everybody admits that the woman of as the glass was left on the upper pla-form of the observatory, and the im-pression is of such flowers as are grow-ing on Mount Arie. The quality of the glass is not impaired at all, though the impression seems to go clear through the largest orty in a "baby waist" looks ridiculous. A new tennis head-gear for women is copy of the German army fatigue cap.

exceed \$500, and the total gold derived from this work, covering not over two acres of the forty acres, is considerably over \$60,-000. The vein or lead is well defined through-out the whole length of the lot, about one-quarter mile, and has been explored at a number of places by shafts and tunnels, proving its continuance in size and richness from one end of the lot t the other, a fact which is further evidenced by the valuable and rich mining properties lying upon the extension of this lead, both north and south of the property of the Atlanta Gold Mining Company. The shafts sunk upon this lead have gone to a depth of about forty feet, and have, without excep-tion, followed 'own quartz vains which grad-ually increased in s'z and richness as depth was attained. Hitherbo the mining has been conducted principally with water, except where shafts were sunk, and the ore passed through suice boxes depending silely for a means of separation upon the gravity of the gold, and consequently allowing much of the fine gold and all the gold contained in the undecomposed sulphurets to run to waste. This leas, resulting from causes noted above, has amounted: to fully one-half the assay value of the ore, as demonstrated by determinations made with great care and exactness by the company. The Atlanta Gold Mining Company now proposes to put in operation machinery for mining which will greatly cheapen the cost of the ore per ton delivered at the mill, not alone th heavy free gold, but all finer par-ticles, and the gold contained in the sul-phurets as well. The experiments made by the company have demonstrated that a mill with a capac-ity of twenty tons can be supplied with ore for many years and will yield, an annuel If there is one thing women wear that s hotter than another, it is the feather bonnets have the strings tied at the While traveling. dipped in pulverized chalk or ammonia If, as is often the case, there is no re ceptacle for cooking utensils in the kit-chen, thus obliging you to carry them back and forth from the pantry whenever they are to be used, determine to do it no longer.

We do not sufficiently appreciate hot water bags. The amount of confort in one of them cannot be known except from actual experience. There should be, if possible, half a dozen bags of various sizes in the sick room, casy of access and ready for use.

It is well known that all aromatics are easily dissipated by heat. Many of them will not bear the boiling point of water without evaporating. Not observing this fact many cooks work to a disad-vantage. The finest flavor of aroma of coffee is quite volatile, and if boiled a minute after it comes up to 212 decrees minute after it comes up to 212 degrees it begins to disappear, and this is why so much coffee is poor. As soon as the coffee pot comes to a boil set it back immediately.

A Peculiar Pea.

Thomas W. Jaffress, Secretary of the Alameda County World's Fair Associa-tion, left at the office of the State Board tion, left at the office of the State Board of Horticulture two branches of a new variety of peas, which have never before been grown in this country. The pea is very peculiar in its manner of growth, not climbing like the ordinary pea, but growing with a thicx stem like a bush. It has one strong center stem, from which branch a targe cluster of blos-soms form, each cluster forming a separ-ate bouquet. The flowers, folisge and seed-pola are those of the pea, but the seeds are peculiarly marked. Mr. Jef-fross grew them from seeds which he obtained from Sociland, a friend of his having taken them originally from the

Miss Ella L. Knowles, whom the People's party of Montana has nominated People's party of Montana has nominated for Attorney-General of the State, is a successful practicing lawyer in Helens. She was born in New Hampshire, and was graduated from Bates College, Maine, in 1884. She has an extensive practice among miners and workingmen, and it is thought that they were influ-cutial in securing her the nomination. The marking side of Chieren here a

The working girls of Chicago have a model lodging house called the "Jate Club" after the lady who helped secure the building for them. The girls are their own board of directors; they manage their own affairs, and consequently can have anything they desire by giving the order for it. They have all the com-forts of a home and at a much lower rate than that of even cheap boarding-houses.

Many slender faced women, matrons included, have this season dared to elect included, have this season dared to elect for the sailor hat who never wore it be-fore. It is a model that increases in popularity every year. Its simple, unpre-tending shape is the least trying of all the styles now worn. The severity of a straight, flat brim is often the secret of the becomingness of a hat, and few women have the regularity of feature to wear one with a curved and dented and stherwise mutilated brim with aplomb. Remedy for Squeaking Shoes.

"A man who wears squeaky shoes is worse than a kiss without a mustache accompaniment," said a modern girl to and Express man last night. She directed Ler glance toward a young man who was crossing a tiled floor. "Some women know more than men, and if I had that young man in my care for ten minutes I would give him some good ad-vice. He does not make much money and cannot afford to buy expensive shoes, and has to be content with readymade ones. "Nearly all ready-made shoes squeak,

and the reason is this: When the inner and outer souls are put together there is generally some grit between them, and the action of the foot causes the little pebbles, which are harder than the leather, to work like the ball bearings of a bicycle, and thus the squeak. A dealer told me a way to remedy this. When your shoes squeak go to a shoe-maker and have him put a peg in the middle of the sole and there will be no more loud proclamations. "Another thing, when you buy a new

"Another thing, when you buy a new pair of shoes and they burt you, put wa-ter in them and let it remain for a min-ute, then pour it out, and if your shoes burn or hurt you after that you can say I am wrong. The water takes all the natural heat out of the leather, and make the shoes comfortable."--- New York Mail and Everses Mail and Express.
