## Salton Sea Agaia.

It is said that Salton Sea, which, two years ago, was formed by the overflow of the Colorado River in the desert of of the Colorado River in the desert of Arizona, is likely to be there again seon. A cattle man, who is well acquainted with the region, says that the river is again overflowing into the desert, and is likely to do so for a long time, as there have been very heavy snows in Montana, Idaho and Utah, at the headwaters of the river, the melting of which has caused the present overflow. The last overflow is the first in twenty years, but there is every indication that it has been com-mon in the past, and that the present desert was in former times a great desert was in former times a great lake, which there is nothing to pre-vent its being again, if water enough runs in to fill it. He says: "When the overflow of two years ago occurred the water followed the identical chan-rele that had become almost oblight. nels that had become almost obliter-ated from age. The water is now rur ning into the desert in two branches. ning into the desert in two branches. One is Carter River and leaves the Colorado about fifteen miles below Yuma. The other channel is New River, and is forty-five miles further down the river. Salton is about 200 feet below the level of the debouch-ments of these rivers. The water has been flowing into both of the breaks I have named for several weeks past. Both New and Carter Rivers had ad-vanced about thirty-fire miles when I vanced about thirty-five miles when I left, and I think the water will be into Salton in a few weeks more. A num-ber of large lagoons have already been filled between the Sink and the Colo-rado. One of these is fully ten miles square. It will not take long for these depressions between the river and the big basin to be filled, and then the water will slide over into Salton.— Picayune.

### Bottles in China.

It is stated that the Chinese much appreciate European bottles. They have a great liking for them, and will resort to subterfuge, if necessary, to get hold of them. The common people worry the medical missionaries ple worry the medical missionaries considerably upon this point, sham-ming sick in order to be supplied with a bottle of medicine. The authority for this report does not furnish any information as to what our celestial friends do with the bottles. - Scientific

Egypt has 3,450,000 date palms, producing 300,000 tons of fruit.

men, and two boys ten to fourteen years old. With the wide cut-mower, it is not necessary to begin cutting be-Any time is a good one to cut bushes to destroy the growth. If the leaves can be prevented from growing one season, the bushes will die, but other-wise they may be cut down to the roots every year for a lifetime and every spring they will spront again. The cutting should begin at once, and a fast as the new spronts appear these tween 4 o'clock in the afternoon. This is easier for the horses, more comfort-able to the man who drives them, and much better for the hay if it contains tween 4 and 8 o'clock to keep ahead of much clover. Enough can be cut be-tween 4 and 8 o'clock to keep ahead of the wagons until the next afternoon. as fast as the new sprouts appear these should be removed. But the most should be removed. But the most effective way to rid the land of any kind of brush is to take out the roots One man does the moving and tedding, and what little raking there is to do, and still has time to help considerably in mowing away the hay in the barn. The boys drive the wagons. Two men stay in the field and do the loading, and one stays at the harn to manage by means of a heavy plow and a mat-tock. It is more work at the begin-ning, but a saving in the end.—New Ning, but a York Times. and one stays at the barn to manage the horse fork and keep the hay mowed back. Three teams and one good horse are necessary, the latter being used at the barn for unloading. When the boy comes in with a load, he leads the

## ANÆSTHETICS FOR HORSES.

A correspondent of the London Live Stock Journal writes: "In extremely painful operations on the human subpainful operations on the human sub-ject anæsthetics are almost invariably employed. The patient is rendered insensible. This not only renders the operation painless, but affords the operator every facility for conducting his work, in consequence of the per-fect placidity of his subject. "It is a sign of the times that chloro-form is coming into use in operations taking the load off his wagon while the other one is being loaded in the fields. The time consumed in loading is a little more than that for unloading, and this allows the man at the barn to

scatter the hay in the mow. Whether he can keep up this end of the work depends on the distance to haul and "It is a sign of the times that chloro-form is coming into use in operations on the lower animals as well. In the practice of gelding it has been freely adopted, and with great success, by several veterinary practitioners during the last few years. "It is to be hoped the system will become general. Licensed vivisec-tionists are instructed to use ames-thetics when conducting their investi-

thetics when conducting their investi-gations. The time is probably not far off when humanitarians—or rather 'beastarians,' as they have been called —will be strong enough to pass a law that colts operated upon to destroy their fertility shall be duly chloro-formed or rendered insensible by some other efficacious anesthetic. It would therefore has well if these who new ento sixty cents per ton, varying, of course, with the weather. On the farms of the Atlantic and Central States this tedder, loader and horse fork are coming into increasing favor, but the average farmers of those regions manage therefore be well if those who now op-erate in the old fashion would pursue the new and better way so as to be prepared for future regulations. The administration of chloroform is a simple matter in skilled hands and inexpensive as well."

RAISING FARM TEAMS. Farmers too often sell the best horses and content themselves with any sort of a team on the farm as being of little consequence, and too English and French farmers have

pure bred draught mares to profitably do the farm work and raise a colt every year that pays the rent. Mr. McLain, at a Kansas Farmers' Institute, advocated breeding high class horses and having good teams on the farm. He said:

sider the most promising to raise for sale. I suppose, of course, they mean for the farmers in this section, for the farmers in this section, engaged, as they are, in profitable farming. I would say that if one-half of the farmers here kept an account and knew just what their horses cost them when grown and ready to work they would find that they have cost them more than they could be sold for. I would say, for most farmers, to raise (if for sale) draught horses. My

(if for sale) draught horses. My

(if for sale) draught horses. My reasons are the following:
I. Early maturity. Draught horses can be gotten on the market one year younger than a warm blooded horse.
2. They are easily broken. It takes less time to fit them for market. They do not require such perfect condition as a driving horse.

as a driving horse. as a driving horse. 3. Then, too, if by chance they have a slight blemish they will pass muster where such a blemish would unfit a blemish they are they have a slight blemish they will pass muster where such a blemish would unfit a

driver for market. 4. It don't require any more feed to raise a big draught horse than it does the inferior quality of the stock.

HOUSEHOLD AFFAIRS.

SWEET-PICKLED WATERMELON RINDS. Peel the rinds with a sharp knife that will take off the green skin evenly. Trim off also every trace of the pink flesh of the fruit, because it is too juicy to make a firm, crisp pickle. Then cut the strips of rind into small pieces two to three inches long, and placing them in a large earthen dish, sprinkle them lightly and evenly with salt. Cover the dish, and let it stand overnight. In the morning drain off the water that the dish, and let it stand overnight. In the morning drain off the water that will have formed, rinse the rinds in cold water, and cook them in a steamer until a broom splint will readily pierce them. Cooking the rinds by steam is an easy method, as they are less liable to burn than when cooked in the spiced vinegar. When the rinds are tender, take them out carefully with a skim-mer, and put them into a stone jar.

Take good cider vinegar for the basis of the pickle. Allowa pound of sugar to a pint of vinegar, and add also half an ounce of stick cinnamou broken into of whole cloves and blades of The whole amount of vinegar, inch each mace. sugar and spices used must of vinegar, sugar and spices used must of course depend on the quantity of rinds to be pickled, but a quart of vinegar is usu-ally sufficient for the rinds of a medium-sized melon. Boil the vinegar, sugar and spices together vigorously half an hour, skimming off the froth, and pour the pickle boiling hot over the rinds. Press the rinds down under the pickle by means of an earthen plate or saucer, fasten the cover on, and tie a cloth over the whole. These pickles will be ready for use in two weeks. ---Harper's Denor Bazar.

### TOMATOES RIPE AND RED.

It is not so very many years since tomatoes, or "love apples," as they were then called, might be seen ranged along the country mantelpiece, divid-ing the honors with shell flowers and wax wreaths.

They were considered then as rank poison, unfit for the proud position they now occupy on the table. Even after that belief was disproved, they were widely suspected of being the subtle cause of cancer, and their pop-ularity suffered not a little thereby. But now they are recognized as one of the chief of vegetables, and new ways of preparing them are being constant

by perpairing them are being constant-ly devised by knowing cooks. To make "tomato eggs" cut three or four good sized and not too ripe to-matoes into halves. Take out a little of the inside, lay them in a pan con-taining two ounces of heated butter, and for them lightly, when acceler and fry them lightly; when nearly done carefully drops raw egg from the shell into each tomato; watch till it has set perfectly, then take each one separately from the pan and lay it on a slice of buttered toast cut to the side a site of built for the side of the fruit. Dust over them a little coralline pepper, and sprinkle a little finely grated ham on the white of each egg. Serve on a bot dish, and garnish with the leaves of the tomato.

Here is another way of msking a dish that will be a feast to the eye as well as to the palate: At the blosson end of six ripe tomatoes make a small hole of sufficient size to hold a diceshaped piece of butter that has been dipped in pepper, salt, and grated nut meg (mixed). Place them in a cup shaped mushroom, previously soused in heated butter and slightly dusted with pepper. Arrange them on a well-oiled dish and set them in a hot oven to cook. Take the soft roes from six bloaters, season them with oil and pepper, curl them round, and grill quickly on buttered paper over a clear quickly on buttered paper over a clear fire. When the tomatoes and mushrooms are cooked remove them from the oven and place a roe on each one.

Round the whole pour a gill of ham coulis

To make tomato fritters, boil, peel and pound to a pulp four tomatoes. Beat this pulp up with the yolks of four and the whites of two eggs, four four and the whites of two eggs, four tablespoonfuls of cream; season with a little grated nutmeg and a dash of cinnamon. Beat the whole till the bat-ter is very light, then divide it into small fritters, and fry quickly in a pan of heated butter. Drain on kitchen paper and send to table with the fol-lowing sauce: Melt an ounce of butter in a clean saucone, skim it well edd in a clean saucepan, skim it well, add the juice from two lemons and a tablespoonful of caster sugar. When all is thoroughly heated send the sauce to table in a tureen. --New York Sun.
