If short of hay or fodder, sow rye. It will give abundance of pasturage late in the fall, and during winter, if not covered with snow. If not in con-dition next spring for a paying erop as grain, it may be turned under and help cut the corp. Some claim the winter feeding betters it for a crop of grain-causes it to stool out more than it would otherwise. Be that as 't may, it makes good pasturage. Sow some WASHING OF BUTTER. The advantages of washed and un-The advantages of washed and un-

EXPERIMENTS WITH LAYING HENS.

The advantages of washed and un-washed butter are being discussed in England. Too much washing is ad-mitted to injure the flavor, but a little the better plan is to give them the run of a good pasture, penning up at night. This is especially necessary with the ducks after they commence laving, or a good portion of the eggs will be lost, as they drop them almost anywhere, and it is only by keeping them penned up at night that they can be secured. It is not best to confine them with other fowls; have a separate anartment and see that bedding is mitted to injure the havor, but a little water is generally used. The Swedish and Danish butter-makers who supply the English market get all the butter-milk from the butter by repeated pressure. This requires a good deal of work, while washing the butter them with other lowis; have a separate apartment and see that bedding is supplied so that they can be kept clean and comfortable. While they like to swim and play in water, it is very important to their health to have simplifies the matter greatly. Some of the best English dairy makers never Som the water. In this country makers hered the use of it is universal. Our dairy-men may learn something from the discussion, which may give them some new ideas on the subject. the place dry where they rest at night. -Orange Judd Farmer.

FARM AND GARDEN NOTES. · LIGHT SHOES FOR YOUNG HORSES. Comb honey is more salable than . The most careful horse breeders are extracted. agreed that the lighter the shoe and the less it is worn the better. In a re-Aluminum horseshoes are worth a the less it is worn the better. In a re-cent address before an English agri-cultural society, Professor Ace dis-cursed the subject, deprecating the blundering management of the feet of horses. Often fine animals are ruined by being caused to wear their shoes too certy and too large. Standing in thorough trial. The objection to fed honey is its

tendency to candy. Bees are fond of salt and are said to make more honey when it is provided. Big horses with style and quality by being caused to wear their shoes too early and too long. Standing in the stable a long time is liable to cause lameness, and could be avoided by taking off the shoes and substi-tuting soft leather. Red-hot shoes should not be applied to the foot of the horse at any time. In plowing, cultivating and many other form operations a borso will to wind are still commanding remunerati

A horse with a sore mouth will pull harder on the bit than one with a sound mouth. If the fall is favorable to honey

gathering the colony will store enough other farm operations a horse will walk ten to twenty miles a day and advances about four feet at a step. At to winter on. - A fast walker possesses the essen

tials of courage, energy and nimble ness of action. each step the horse lifts half a pound

It is harder to find a first-class road or carriage horse to-day than it has een for many years. There are said to be four distinct varieties of honey-bees in India. They are all different from the honey-bee of

required to lift this five tons of iron could be expended in the work the horse is doing, much more could be accomplished. In the light of these this country. When a sheep is to be sold put it in the best possible mutton condition. Never think of selling a thin, poor facts is ft any wonder that when young horses begin to wear shoes they soon

sheep on any account.

A hen that lays a large number of eggs is never sleepy or droopy. She is too busy supplying the different foods that nature and the eggs destill mand. Feeding too much soft slushy feed

Belief in the necessity of keeping a male bird with laying hens is still quite common. In order to settle this point a series of experiments was un-dertaken by the Geneva (N. Y.) Stais often a factor in bringing on the gapes in young chickens, as the fer-mentation taking place tends to create the germs of the disease. On the farm, at least, the fowls

dertaken by the Geneva (N. Y.) Sta-tion. The trial was made with four pens, two of which contained cocker-els, while the other two were without any. The result showed that a pen of pullets kept without a male produced eggs at about thirty per cent. less cost than an exactly similar pen with which a cockerel was kept. Another pen without a male gave during the first three months about the same proportionate excess of prodshould have a good range, as they will pick up much that would otherwise go to waste, and in this way the cost of

Chicks that give promise of proving standard fowls will thrive much better if the culls are removed and more room the same propertionate excess of prod-net over an exactly similar pen with which a cockerel was kept. After the development of the feather-enting habit the egg product diminished, but during eight months the total egg in the quarters and a freer range given to those that are to be kept.

Don't allow the boys to tease the stock ram. A butting ram is a great nuisance as well as a dangerous ani-mal, and the boy that taught him to yield for each pen were very nearly butt does a mischievous act.

In each of the two pens without male An English farmer timed his horses birds some pullets had begun to lay from one to two months earlier than when plowing, and found they walked at the rate of nearly 14] miles in eight any in the corresponding pens in which hours. It requires a eleven miles walk

any in the corresponding pens in which male birds were kept. While "feather-ceating" usually ap-pears after feeding for any length of time an unvaried ration deficient in some constituents, more especially ni-trogenons matter, the habit has develcause among fowls having a ration which gave satisfactory results with

HOUSEHOLD AFFAIRS. TO CLEAN OILCLOTH.

Wash with a large, soft woolen cloth and lukewarm water. Dry thoroughly with a soft cloth, and afterward polish with a soft cloth, and afterward polish with milk or a solution of becswax in spirits of turpentine. Never use a brush, hot water or sonp, as they will remove hot paint. A solution of two and one-half pounds of parafine in one gallon of turpentine, dissolved by the aid of a little heat, is another excel-lent renovator for oilcloth. The solu-tion should be applied while warm with a sponge or piece of flannel. Let it remain for twenty-four hours, and then polish with flannel.—American Farmer. Farmer.

HOUSEHOLD SECRETS.

Every household in time comes to Every household in time comes to have its own unwritten laws and tra-ditions, specifics that have been used through many years with the same sure and satisfactory results, and here is revealed some of those that have made the domestic machinery of one home at least run smoothy:

home at least run smoothly: When pipes or stoves are to be set away take boiled linseed oil, procu-rable at any hardware store, and with a cloth rub it over the iron. Almost before the work is finished it will have dried into a smooth warnish, which will dried into a smooth varnish which will keep the stove bright and impervious to damp for any length of time.

For the nickle plate of a stove this process is reliable: Slack a piece of quicklime in a covered kettle with just sufficient water to cause it to crumble While hot add tallow and work into past. Cover the bright work with this. It can be easily wiped off. It prevents all dimming and discoloration what-

For renewing black silk there is no better way than to take the ripped-up silk, place a breadth upon a white scrubbed kitchen table, pat it thor-oughly down with a sponge dipped in ammonia and water until the silk is wet and stuck smoothly to the table. Lay one breadth over another, patting new she breath over another, parting each smooth; then leave them to dry. No ironing is needed and the silk will be almost like new.

Oxalic acid is the standard remedy for ink stains, but by some perversity it is never on hand when needed. Salt, however, is always ready, and it is al-most certain to eradicate the stain from any woolen article, such as a carpet or table cover, if applied at once. Thrown on a fresh stain it acts once. Thrown on a fresh stain it acts as a magic absorbent. Immediately brush up the stained salt as lightly as possible. Then apply fresh and whisk vigorously. In most cases the stain wholly disappears. I know no other absorbent that will act in this way. A soap that is invaluable where car-pets, rugs or woolen curtains need freshening or cleansing is as follows: Boil for twenty minutes, constantly stirring, two quarts of water, one-half

stirring, two quarts of water, one-half pound of lump starch, one tablespoon salt, three bars laundry soap cut fine; when the mixture is smooth and free when the mixture is smooth and free from lumps remove from the fire and add one tablespoon of salaratus and four ounces of ether. Pour into molds to harden. Rub the soap on the car-pet, then sponge off lightly with a damp cloth or sponge. The user will be delighted with the result. When silk or woolen articles become

damp cloth or sponge. The user will be delighted with the result. When silk or woolen articles become slightly soiled, but are of texture too delicate to be treated with soaps or fluids of any kind, the "buckwheat cleanse" is invaluable. In many large dressmaking establishments part of the stock-in-trade is buckwheat flour. The finger marks that become almost unavoidable in the sewing are always carefully brushed with the flour till no trace remains. Light colored woolen wrappers for invalids' every-day wear may be thoroughly brushed in that way when soiled and kept in good condition. This dry cleanse is invaluable for delicate silks. This hint for the home dressmaker is stolen from the establishment of a bright and successful modiste : When there is a waist to remodel, trim or

there is a waist to remodel, trim or drape, use a pillow as a "form." The modiste referred to has used pillows for years, each waist finisher having her own. For the pretty draped waist without outside darts the linings are fitted, stitched and boned, except the under arm and shoulder seams, then hooked around the pillows, which fill out each curve properly, so that the dress material can be correctly draped

duction. Is it not time we gave up raising scrubs and breed for size, style KEEPING DUCKS AND GEESE. and beauty.

The advantage of raising ducks and geese over turkeys and chickens is, that if they can be given the range of If increased yield is the object choose the most persistent layers and mate them with a cockerel of the best egg-laying strain to be had. Then give the hens sufficient exercise and plenty of egg-producing food.

that if they can be given the range of a good pasture with plenty of water, they will need less looking after. They are hardy, easily raised and require less expensive food than other poul-try. To this may be added the fact that in nearly all cases they are healthier, being less subject to disease and free from lice. An additional source of income is their feathers. **They** lay eggs, hatch young fowls, and yield a good quantity of feathers, and ean, with good treatment, be made profitable. Of course with either it is **Div**ays best to have the larger, better breeds: Euroben geese and Pekin ducks cost no more to raise than the other kinds, while they return a much larger profit. Diarrhœa may often be mistaken for cholera, as the symptoms at the start are nearly the same. As soon as the birds are affected they have a downcast look, become sleepy, lose strength and have more or less fever.

The advantage with the Italian bees over the black is that they are much easier to handle, being much gentler. They also produce a much larger in-crease of bees, and under the same conditions make more honey.

In most localities the use of honey is nothing like so great as it would be if those who keep bees would put up the honey in a more attractive form and take more pains to bring it to the notice of the better class of consumlarger profit. Ducks, if provided with comfortable Ducks, if provided with comfortable quarters where they can rest at night and are reasonably well fed, will often commence laying the latter part of January or the first of February, and lay very regularly, until warm weather sets in. Geese begin to lay early in March and will lay fourteen to eighteen eggs; these should nearly al-ways be set under hens, as it is often the case that the nother will not be

Foundation is an indispensable article in the apiary, and every keeper of bees should have a good supply of it on hand.
