happens to them they cannot raise an-other.

CALVES IN WINTER.

Give a calf a proper start the first year. If poorly fed and housed no af-ter care will ever make up the loss from the unthrifty habits of body and double to make up the lost gain. poor digestion which wrong treatment at that stage is sure to bring on. The housing should be good and warm, without being stuffy and ill ventilated, and abare all their schinks and dided, Parent stocks that have swarmed must depend upon young queens

HOUSEHOLD AFFAIRS.

HOW TO WASH FLANNELS.

Flannels should always be washed by themselves in a suds prepared for them; on no account be rubbed on the board, unless very dirty. The suds should be pleasantly warm to the suds should be pleasantly warm to the hands, not too hot, and no hot or cold water be added while the flannels are in the tub. They should be rinsed in clean water of the same tempera-ture as the washing suds, and as many waters used as may be necessary to take all the soap out, as the flannels will never be soft with the soap left in them. They should never be blued. They should be pulled in shape before In them. They should never be blued. They should be pulled in shape before hanging, undershirts being hung from the shoulders. They should never be hung out of doors in freezing weather, but quickly dried before the fire, or, better, over the register, and pressed as soon as dry, enough — New York as soon as dry enough.-New York Advertiser.

ICING WITHOUT EGGS.

A recent newspaper article called at-tention to an excellent recipe for mak-ing icing without eggs. It is a coning icing without eggs. It is a con-venient thing to know at this time of the year when we are entering upon the days of scarce and expensive eggs. The recipe in question directs the stir-Ine recipe in question directs the stir-ring of confectionary sugar-not merely pulverized—into orange juice. A still better way of making eggless icing is the following, which has been in use in some households for a long time, and has entirely superseded the usual method. Put over a bright fire usual method: Put over a bright fire a cup of granulated sugar to a quarter cup of water. Shake together first, but do not stir once after they have been set on the stove. When it drops into a soft ball in water take off and set on the ice or in a dish of cold water. When it has partially cooled begin to stir with a fork. It will be come a creamy pliable mass, if all is well, that after flavoring is added can be spread at once on the cake. If it be spread at once on the case. If it should harden too much, or be at all rough, add more water and cook it over. The final result is perfection for icing or for hard pudding sauce.— New York World.

ARRANGING CUT FLOWERS.

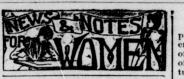

With very few exceptions, every flower looks best when arranged with the foliage Dame Nature bestows upon Flowers should not be crowded. Each one should have a fair chance, therefore do not use a dozen flowers when six would look far better. Buds and foliage are as important in flower arrangements as the flowers themselves. Dame Nature always arranges her flowers in this manner, and we cannot do better than to copy her as nearly as we can.

Different flowers need different surroundings. Tall flowers like gladiolus, lilies, dahlias, chrysanthe-mums, need large, tall vases, while sweet pees, nasturtiums, pansies and other short-stemmed flowers need low vases, bowls or baskets. In whatever we arrange our flowers, let it be sec-ondary to the flowers themselves. It should not be highly colored, so as to "feill" the coloring of the derement "kill" the coloring of the flowers, or so elaborate as to draw attention from

We are not compelled, as in former years, to put our flowers in the reguyears, to put our nowers in the plan, batter in the plan state of or use a glass preserve dish. There are many beautiful receptacles for flowers, American cut glass, cut into innumerable facets, reflecting myriad rainbows of colors; in bowls, baskets. and dishes of various forms. There and dishes of various forms. There are bowls and jugs of crystalline white, amber color, delicate yellow, turquoise blue, apple green and a thousand and one conceits of various kinds.

Cut flowers should be taken from the vases each morning and a bit of the stems cut off, all decaying leaves and flowers taken out, and replaced in fresh water. Soft water is better than fresh water. Soft water is better than hard; if the latter is used, a few drops, of ammonia may be added. The cooler the flowers are kept the longer they will last. In the winter, when flowers are scarce, it is a good plan to take cut flowers from the vases at night

and place them in a washbowl, keeping the flowers above water. Put them in the cellar, or a cool room where they will not chill. They will freshen up and keep much longer than if left all night in a hot room. Never leave flowers at night in a sick room. It is hurtful for the sick person and the flowers.—Farm, Field and Fireside.

There is a decided fancy for and torquoise, pink or yellow. black

The old-fashioned solferino is the next red to be handed down from ages ago.

New evening gowns have a white silk skirt with black silk muslin bodice.

Shoulder-capes are made with double fronts in Russian style and enormously full plaited collars.

In spite of the black and white fad, black and magenta is having (in pros-pect) a successful run.

Velvet-dotted moires trimmed with mirror velvet are already ordered for matrons' reception gowns.

The fichu cape with long ends fall-ing over the front of the skirt is one of the features of autumn costumes. The women of Iceland have had

municipal suffrage for more than twenty years. They are now eligible to municipal offices.

New York has five women lighthouse keepers; New England has two. Nancy Rose, of Stony Point, N. Y., has been in the business thirty-five Knitted corsets are an invention which comes from England, and are of

service to the weak and nervous who cannot bear any pressure of tight or unyielding clothing about them.

Quite the latest idea in lamp shades s to have a series of shades of delicate beliotrope. They can be either round, square or octagonal, and made of silk, chiffon over silk, or mousseline de soie without any lining.

An observant statistician makes the amazing assertion that girls with retrousse noses marry sooner and are more fortunate in catching good husbands than young ladies whose fea-tures are of the Greek or Roman type.

All the important cretonnes are now are considered very artistic. For morning rooms and bed chambers the cretonne and paper are used together, and the effect is harmonious and pleasing.

In a plot of ground twenty by thirty feet Mrs. Mary E. Loud, of Chelsea, Mass., has succeeded in cultivating Mass., has succeeded in curivaring wild flowers to such a degree as to win the commendation of the Massachusetts Horticultural Society. She has se-lected the plants so that some are in bloom all the year.

Mrs. Andrew Carnegie, as well as her distinguished husband, is an arder tover of music, and her charities are very apt to take the musical form, so to speak. If a kindergarten or a hospital is in need of a piano or organ an appeal to Mrs. Carnegie is certain to enlist her sympathy as well as her substantial aid.

"I used to buy shoes of the best quality," said a young woman. "but now I buy shoes at just half the price that I formerly paid and get twice as many pairs. The result is that they many pairs. The result is that they are always fresh and fresh looking. Of course the quality isn't so nice, but I think the lack in quality is more than made up by the increase in daintiness.

Near Madison Square, New York City, in a side street, there may be found a "Millinery Institute" in which young women are instructed in the young women are instructed in the magic art of making \$15 and \$20 hats out of a dollar and eleven cents' worth of material. This should be a valua-ble tip for young married women and others of the fair sex who would prac-

tice economy. Mrs. Sallie Walsh Johnson, who died a few days ago in Washington, was the daughter of the late Governor Wilson Shannon, of Kansas, and a famous beauty. She is said to have attracted the attention of the Grand Duke Alexis, of Russia, at a ball in St. Louis, during his visit to this country several years ago, when he declared her to be the handsomest woman in America.

This hat was added to the small variety of traveling hats last spring by one or two houses, but, together with the beneficial properties of a perfect lax-ative; effectually cleansing the system, stitched turban, has waited until

Bartering for Furs.

Don't Forget

Barlering for Furs. The system of trading at all the posts of the Hudson Bay Company is entirely one of barter. The standard of value throughout all the territories of the company is still—as for cen-turies past—the skin of the beaver, by which the price of all other furs is regulated. Any service rendered by the Indian is paid for in skins, the beaver skin being the unit of compu-tation. To explain this system, let it be assumed that four beavers are equivalent in value to a silver for skin, two martens to a beaver, twenty skin, two martens to a beaver, twenty muskrats to a marten, and so on. An Indian wishing to purchase a blanket or gun from the company would give say three silver foxes or twenty beaver skins, or 200 muskrats, or other furs,

according to their proper relative po sitions of worth in the tariff.

For a very evident reason the trap-per price paid for furs is not fixed in strict accordance with their intrinsic value; if this were so all the valuable fur-bearing animals would soon become extinct, as no Indian would bother to trap a cheap fur while a high-priced one remained uncaught. He may pos-sibly have to pay five silver fox skins for blankets worth about \$15, the value of the skins paid representing \$200, still he can if he chooses buy the same article by paying for it in musk-rat, yellow fox, or other furs of in-ferior worth. --Chicago Times.

Power.

The recent record breaking performances of ocean-going steamships have been done on American coal from Pocahontas, Va.

It would take 720,030 rowers, work-ing at their oars in eight-hour shifts, to develop as much power as the steam-ship Lucania's engines. The first electric railroad for coal carrying purposes has just been com-pleted from Buck Mountain to Eck-

ley, Penn. The initial installation of the Ni-

agara electric power arrangements provides for 15,000 horse power. More can be obtained almost beyond limit. The Tivoli waterfall, which provides light and power for transmission to the Rome of the dead Cæsars, furnishes as yet only 2600 horse power. New York Recorder.
