WALTER BAKER & CO., DORCHESTER, MASS.

MADE

000,000 ACRES OF LAND

The BEST cow.

The best cow is the one that yields the greatest amount of butter fat in the course of the year at the least extension and the course of the year at the least extension and the course of the year at the least extension and the course of the year at the least extension and the course of the year at the least extension and the course of the year at the least extension and the course of the year at the least extension and the course of the year at the least extension and the year at the year a the greatest amount of butter fat in the course of the year at the least expense to her owner. The very prevalent idea that a thin cow is necessarily a good dairy animal is a mistaken assumption. Some cows remain poor in flesh because they use their feed to make milk and fat, but a good many others which are equally hearty for least remain the least of an amber of a many others which are equally hearty feeders remain thin because they lack

CANADA THISTLES.

A writer in Garden and Forest de-scribes the novel and effective method he took for clearing some neglected land of Canada thistles. As an experiment he took a clod-crusher, made of two-inch plank, loaded it with as much stone as the horses could draw and broke the thistles down flat and then plowed them deeply under. The plan succeeded perfectly. It seems that their entire vigor, vitality and substance were then in their tops, as they were ready for scattering the seeds. They were entirely destroyed, and a market gardener raised vegetables on the land the next season. Not a sign of a Canada thistle has been seen on the ground to this day.

A GOOD FERTILIZER.

A very cheap and easy way to pre-pare bones to supply as a fertilizer is by the use of ashes. Break the bones as small as is possible. Then cover the bottom of a barrel or box with a few inches of ashes, then put in a layer of bones, and so on until the recep-tacle is filled. The time required for the decomposition of the bones depends upon the strength of the ashes, the size of the bones and the amount of moisture in the mixture. The mixture should be made quite damp by pouring water on it, but not enough water should be used as to cause it to drain. Hard wood ashes which have not been exposed to the weather are best for reducing bones. - American

FATTENING STEERS FOR MARKET.

In bulletin No. 39 of the Kansas Station the results are published of experiments in fattening two classes of steers for market, the experiment extending over two years. One class was fed out of doors without much protection from inclement weather, protection from inclement weather, while the other lot was fed indoors and given all the protection possible. One lot was fed in a yard with a shed closed on three sides, but open on the south side, and the others were tied up in the stables. About the same amount of feed was given to both sets, although those out of doors were subdivided into other lots and various divided into other lots, and various kinds of food were fed to ascertain as well the best winter food. The results of this feeding seemed to show that while cattle needed protection in the winter they did not require to be shut up so close. They grew fretful and needed exercise. The animals that were exposed to the cold gained as fast, but at a heavier expense, as they demand more food. The directors concluded that cattle in the winter should have good protection from bad weather, but also exercise in the open kept in the stables they should be introduced gradually, or they will lose flesh for the first few weeks.

It is said out to be long time if other day.

White lethan the little open are to be long time if other day.

I would call attention to the new method of raising onions, says C. T. Ahearn in the Epitomist. Having tried it myself I know it. The new way consists in sowing the seed in a hot-bed six or eight weeks before the usual time of sowing in the seed in a hot-bed six or eight weeks before the usual time of sowing in the seed in a hot-bed six or eight weeks before the usual time of sowing in the seed in a hot-bed six or eight weeks and it then does harm instead of good. Pussley, lamb's quarter, beet-root, weed, watercress and plantain and dandely a great excellent feed for the seed of the se you would for planting in the old way. The ground cannot be made too Give your hens food that will prostones as possible. A sandy loam, if you with plenty of decaying vegetable matter and well drained, is the right As

matter and well drained, is the right kind of soil for onious.

Transplant the onions into rows one foot apart and three inches apart in the row. While the transplanting takes a good deal of time and labor, the right will be more generally adopted.

It is the small holes that cause roup to a feek. A root of waste and a lot of it makes the after cultivation so much easier that there is a real gain, as it is much more labor to put a weedy onion bed in order than it is to transplant young onions. By this method of young onions. By this method of raising onions they have a much longer season in which to mature, consequently they will grow larger and produce a heavier crop. It makes onion culture almost a sure thing. It makes

If the season is late, the onions can be kept growing in the hot-bed until the ground can be put into proper condition, as they are easily transplanted at any time in their growth before the bulb begins to swell.

A hot-bed three by sir fort will take

A hot-bed three by six feet will take about one and a half onness of seed, which will produce enough onions for eight or nine square rods of ground.

A WINTER REMEDY FOR PEACH MILDEW. California peach growers have found that the use of line, salt and sulphur wash in the winter, when the trees are and the winter, the mildew during the mildew during properly prepared by a long holling, goose was exhibited where the stroys the spores of the mildews where resting upon the bark during the winter. The application of dry sulphur during the spring will also check mildew, but the use of time, salt and and how, but the use of time, salt and and place meets the double purpose of killing both scale insects and lungua spores.

In England young duckings are very extend young but the salt insects and lungua with rice and linely chopped bullock's liver, and afterwards with barley meal and tailow greaves and a little horse-the double of the salt with barley meal and tailow greaves and a little horse-the double degree of the salt rice and linely chopped bullock's liver, and afterwards with barley meal and tailow greaves and a little horse-the salt lines are salt and tailow greaves and a little horse-the salt lines are salt and tailow greaves and a little horse-the salt lines are salt and tailow greaves and a little horse-the salt lines are salt lines

BULL POWER. There are many good reasons why bulls should be worked more than they are, and no good reason that we are aware of why they should not be, except that they are sometimes unruly and hard to manage. When working in a treadmill, however, this objection is of little consequence, and if a little tact is used in feeding his majesty with a few oats after his work is done.

will soon become reconciled to the drudgery and take to it kindly.

The bull has advantage of the horse for this kind of work in that he is not likely to be in demand for other work can be depended upon when

The improved conveniences of the modern dairy farm demand the use of a cheap power of some sort for running the separator, the churn, pumping water, sawing wood, etc. The wind-mill is admirably adapted to doing many of these jobs, such as pumping water and sawing wood and cutting fodder, which can be done whenever the wind blowest leaves and sawing wood and cutting fodder, which can be done whenever the wind blows and occasion demands. But a power that can be depended upon for moderate work daily, without regard to wind, and that shall be less expensive and troublesome than steam, s in demand on many dairy farms, and the bull seems admirably qualified to fill this want.

There can be no question that moderate daily exercise is a good thing for the bull; it makes him more vigorous and sure as a sire, more tractable and less dangerous to handle, and greatly diminishes the risk of his suddenly becoming treacherous. The testimony of many farmers who have tried it is unanimous on these points. - Massa chusetts Ploughman.

POULTRY NOTES.

Cross breeding will increase size. Chickens should be given warm, but never hot food.

In winter noon is the best time to feed green food.

Meat is apt to cause bowel trouble f given too freely. A stinted fowl will never make a

good market chicken. The earlier the pullets are hatched

the sooner they will lay. The eggs from a pullet are usually smaller than those of a hen.

The newly-hatched chick needs al-

most as much care as a baby. Barley is an excellent poultry food.

It is largely used in England and Can-

It is said that eggs will keep for a ong time if kept cool and turned every White leghorns are a trifle heavier

A difference of ten degrees in the temperature of the poultry house may be the turning point between laying and non-laying

Liberal feeding is necessary in cool weather, but liberal feeding does not mean giving the fowls all the corn they

The laying hen is always a working hen. The farmer who understands his business and wants eggs will see that she gets the needed exercise. The best way to get a choice flock is to hatch only first-class eggs and select the best pullets for keeping. After-ward select only the best cocks for

mating and call out all the indifferent layers, poor sitters and carcless

HOUSEHOLD AFFAIRS.

GERMAN HOLIDAY BREAD.

The author of a celebrated cook book sends to the American Agriculturist this recipe: In the evening set a sponge as usual for bread, in quantity enough for three loaves. In the morning, when fully risen, add one pound of brown sugar, one pint of dried apples, or pears, minced fine, one pint of broken hickory or walnut meats, three tablespoonfuls of caraone pint of broken hickory or walnut meats, three tablespoonfuls of cara-way and one of coriander seeds. Mix thoroughly, mold into loaves and bake when light. Wrap each loaf in a towel and put in a cool place. It will keep for several weeks.

OLD-FASHIONED CURRANT DUMPLINGS.

Old-fashioned currant dumplings, boiled in a cloth, is seldom seen on our tables, and yet it is generally a favorite, and will be found just the thing to vary the desserts. It is made thus: Into a pint of flour, sifted, with a heaping teaspoonful of baking powder and half a teaspoonful of salt, rub a large teacupful of finely chopped beef suet and the same of currants, washed thoroughly and dried in a cloth; now with a fork stir into this enough very cold water (about a third of a cupful) cold water (about a third of a cupful) to make a rather soft biscuit-like dough. Put this into a floured cantondannel cloth, rough side out, allow-ing room to swell; tie closely with a stout string and pop it into a potful of boiling water; cook for three hours and do not let the water stop boiling for a moment; replenish from the hot teakettle. It should turn out a light, appetizing ball. Half a cupful of gran-alated sugar may be rubbed through the flour if liked; if not, the soft white sauce should be well sweetened. Flavor the latter with nutmeg or vanilla.—New York World.

PAN DOWDY.

Julian Hawthorne and his sister Rose Hawthorne Lathrop, from different sections of the country each sent us a recipe for this dish, from which we infer that it was a double favorite in the Hawthorne family. We give that of Mrs. Lathrop as being the most lucid: Cook a quantity of apples with a little sugar as for apple sauce until half done; take off the range, and season with cinnamon, molasses, lemand a large proportion of butter. P this into a deep earthen dish and cover with a raised dough made with plenty of butter and rolled out two plenty of butter and rolled out two inches thick. Cook in a slow oven until the crust is done. When cold, break the crust into the sauce in pieces the size of an egg and cook again in a very slow oven for an hour. Put away for a day, and the flavor will be much improved. This homely dish usually impresses husbands and brothers as delicious, provided only the apple and crust mingle their flavors in a happy moment and the cook hits the proportions of seasoning to per-fection. Mr. Hawthorne says a sec-tion of it looks like African marble, and that he used to be able to eat a whole pan dowdy three inches deep and ten across, and a pile of buck-wheat cakes afterward.—American Agriculturist.

A whisk broom is the best clothes sprinkler and the water should be hot. The thorough heating of the teapot is the first step towards making a nice

Sassafras oil is excellent for darken ing the hair. It should be applied with a small brush.

When milk is used in tumblers wash them first in cold water, afterward rinse in hot water.

Weak spots in a black silk waist may be streigthened by sticking course plaster underneath.

To prevent clinkers, put oyster shells, one at a time, in the stove when the fire is burning brightly.

A feather bed which has done set vice for a generation or two is hardly a desirable thing upon which to sleep.

A roasted or boiled lemon, filled while hot with sugar and eaten, still hot, just before retiring will often break up a cold. Sait will curdle new milk; there-

fore, in preparing milk porridge, gravies, etc., do not add the salt until the dish is prepared. Bread and cake bowls, or any dishes

are more easily cleaned if placed in cold water after using. If a bottle or fruit jar is placed on

a towel well soaked in hot water, there is little danger of its being cracked by the introduction of a hot liquid. It is said that chocolate cake can be

kept fresh by wrapping it tightly in buttered paper and putting it in a tin box away from all other substances.

The simplest way to keep an oiled table "nice and new" is to wipe it over thoroughly once a week with a flannel cloth well wet in good kerosene oil. For frying always put a pound or two of fat in the pan. This is no waste, as the same fat can be used over and

over by pouring it through a strainer into a crock kept for the purpose. The cardinal rule in a kitchen is to clean up as you go, and if attended to this saves half the labor and fatigue cooks suffer from who pursue the old

method of having a grand and compre-Malachite, agate and azurine, when broken, may be comented with sul-phur, melted at low heat, so as not to change its color, in which different pig-ments are stirred to give it proper ties like the started tints like the stones.

To bake bananas, strip from one side a piece of the skin. Then loosen the skin from the sides of the fruit, dust well with granulated sugar and bake in a moderate oven half an hour. Serve hot in the skins.

Largest Snake in the World,

Naturalists say that the largest ser pent of which accurate measurements have been taken in modern times was an anaconda which Dr. Gardner found dead and suspended in the forks of a tree in Mexico. It was dragged out into open ground by two horses and a careful measurement with a tape line proved that it was thirty seven feet in length.

One of the most thoroughly original works to English is "Bedlam," a play to twenty-five acts. It was written by Nat Lee when contined in a madhouse.

NEWS & NOTES FORWOMEN

The Astor women have \$3,000,000 in Braids come in all shades for trim-

Teagowns are of light colored vel-Petticoats are made of striped silk

Heavy white satin is seen with a sort of ground-glass effect. The leading florists of San Francisco and Cleveland are women.

Curled cock's feathers are used a great deal on black hats.

Fancy handles of fans are extensively dorned with gold fleur-de-lis. France has had sixty-seven queens, of whom thirteen, an odd number for luck, led happy lives.

Golden cornelian is heard much of. Abroad it appears in everything, from match boxes to brooches. In Brooklyn, N. Y., there is a horse-shoeing establishment that is owned and run successfully by a woman.

Twenty-two spinsters are numbered among the inhabitants of the Cherokes Strip. They have located their homes

Velvets and bengalines will be used for coats, and so will cloths, the newest of which are rough cheviots in plain colors and in mixed effects.

Pearls, black, white and pink, of unique beauty of shape and color, are worn set bud fashion in a tiny cup of brilliants as ornaments for the hair. A Swedish woman has hit upon new field for women's work. She ha

started in business as an analytical chemist in a town which is the centre of the mining industry. New gloves in prune, navy blue and

bottle green have moderately heavy stitching, ending at the wrist in fancy scrolls. Large buttons in horn or nickel are in high favor.

Jet in every form will be more in vogue than ever—crowns, bands, aigrettes, buckles and sprays being eagerly sought for hat and bonnet decoration by both young and old.

Mrs. N. E. Bronston, of Atchison, Kan., has been setting type for forty-three years. She learned her trade in her father's office, in Newport, Ky., beginning when she was twelve years old. She has been part owner of one or two newspapers in her day, and has set type in many offices in Kansas.

A new career has been opened to German women by the foundation of a school of decorative art in Berlin. At a moderate fee girls receive instruc-tion in all branches of the decorative industry, such as arrangement of cur-tains and draperies, the manufacture of fringes, pattern drawing, etc. The course lasts from four to six weeks.

Miss Roberta Ackerly has been ap pointed by Hon. John Paul, Judge of the United States District Court of the the United States District Court of the West District of Virginia, deputy clerk of the courts at Lynchburg. This is the first instance of a woman filling such a position in Virginia. Mis Ackerly has for some years been as copyist in the offices of the Circuit and District Courts.

Simple Remedy for Nose-Bleeding.

Obstinate nose-bleeding, Science, is frequently one the most dif-ficult things to check. Several aggra-vated cases have lately occurred at the hospital of the University of Pennsylvania. As a last resort, Dr. D. Hayes Agnew tried ham fat with great success. Two large cylinders of bacon were forced well into the nostrils, and the hemorrhage ceased at once. This is a very simple remedy and one which should be remembered for cases of emergency in the country.

"Sweet Sixteen."

"Sweet Sixteen."

Hood's calendar, always a welcome guest, has made its appearance for 1894, and is more beautiful than ever. The head is that of a lovely girl just "sweet sixteen," in delicate and natural colors. Besides being a thing of beauty, it is especially valuable for the general information presented.

The figures are plainly printed in pleasing and harmonious colors, and the effect is most satisfactory. The calendars can be obtained of any druggist, or by sending six cents in stamps for one and ten cents for two to C. I. Hood & Co., Lowell, Mass. Over eight millions of them were printed to supply the immense demand.

These calendars are issued by the pro-

inos of them were printed to supply the immense demand.

These calendars are issued by the proprietors of Hood's Sarsaparilla, the well-known medicine which has gained such renown by its wonderful cures in cases where the blood was poisoned or impure. The great laboratory in which it is made has a capacity for iffly thousand bottless a day, and is the largest building in the world devoted to the manufacture of a medicine. The sales of Hood's Sarsaparilla in all sections of the courtry are enormous. The proprietors have never claimed that it would care every allment, but they show by thousands of testimonials that Hood's Sarsaparilla purifies and vitalizes the blood, builds up the system and cures those discusse caused by impure blood and debility, such as scrotula, salt rheum, catarrh, rheumatism, etc. It is a great preventive of the grip, and it restores the wasted vital forces after a siege of that dreaded malady, lortifying the system against future attacks. The fact that great care is excreised in the preparation of this medicine, and that nothing has ever been claimed for it except as warranted by previous cures, has much to do with the confidence feit by the public in its curative powers. The motto of the proprietors is, "It is not what we say, but what Hood's Sarsaparilla does, that fells the story," and it is what Hood's Sarsaparilla has done, as shown by the published statements of persons whom it has cured, that has placed it at the head in the field of medicine in the present day.

ROYAL BAKING POWDER CO., 106 WALL ST., NEW-YORK.

A Remarkable Somnambulist. One of the most remarkable and recently come to light. The subject was a young ecclesiastic at a seminary. The bishop of the diocese was so deeply interested that he went nightly to the young man's chamber. He saw him get out of bed, secure paper, compose and write sermons. On finishing a page he read it aloud. When a word displeased him he wrote a correction with great exactness. The bishop had seen a beginning of some bishop had seen a beginning of som of these somnambulistic sermons and thought them well composed and correctly written. Curious to ascertain whether the young man made use of his eyes, the bishop put a card under his chin in such a manner as to prevent him seeing the paper on the table before him, but he still continued to write.

Not yet satisfied whether or not he Not yet satisfied whether or not he could distinguish different objects placed before him, the bishop took away the piece of paper on which he wrote and substituted several other kinds at different times. He always perceived the change, because the pieces of paper were of different sizes. When a piece exactly like his own was substituted he used it, and wrote his corrections on the places corresponding to those of his own paper. It was by this means that portions of his poctural convexitions. nocturnal compositions were obtained. His most astonishing production was a piece of music written with great exactitude. He used a cane for a ruler. The clefs, the flats and sharps were all in their right places. The notes were all made as circles, and thus requiring it were afterward blackened with ink. The words were all written below, but once they were in such very large characters that they did not come directly below their proper notes and vergeing this had

proper notes, and perceiving this he erased them all and wrote them over again.—London News. Write quick, or they will be all gone. Address

G. G. GREEN. WOODBURY, N. J.

MATERIAL BOARD CONTRACTOR CONTRAC Transporting Fuel to Montana Mines. One of the most remarkable and puzzling stories of somnambulism has recently come to light. The subject mountain sides to the railroad is in vogue. Wood slides have been discarded, also the more difficult wagon tarted, also the more difficult wagon hauling, the pack mule being the substitute for both. Eighteen of these burden bearers are employed carrying fuel down the steep declivities. Saddles crossed by double half-circled iron loops or hooks and girted by broad leather helts, form the pack flytures in leather belts, form the pack fixtures in use. Each mule carries one-quarter cord of four-foot wood to the load, the string of eighteen animals transporting four and one-half cords at every trip. This method of moving the fuel is said to be the best yet experimented with.

--Helena (Montana) Herald.

> The amount of gold coin in actual circulation in the world is estimated by the Bank of England officials to be about 865 tons.
