Stomach.

Hood's Sarsaparilla Accomplisher Desired Results. "C. I. Hood & Co., Lovell, Mass.: "Dear Sirs:-I gladly testify to the efficact

and curative powers of Hood's Sarsaparilla and cheerfully state that it has done wonders for me. For years I have been a great sufferer from agonizing headaches and

Distress in the Stomach after eating and at other times, accompanied by sour stomach. I was very bad with indiges-tion also. I noticed in different papers men-

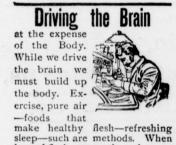

Hood's Sarsa jus Cures tion of the cures Hood's Sarsaparilla had wrought and thought I would try it. It has Accomplished the Desired Results. Accompliance the Desired Acsults. The pain and distress in the stomach and the severe headache spells have been overcome as well as my indigestion. I can now endoy a meal without any distress and can recommend Hood's Sursaparilla as one of the best of medi-cines." Eintz E. Hitls, Fenner, New York. Hood's Pills are purely vegetable, perfectly armies, always reliable and efficient.

For the cure of all disorder

LOSS OF APPETITE, SICK HEADACHE, INDIGESTION, DIZZY FEELINGS, FEMALE COMPLAINTS, BILIOUSNESS, DYSPEPSIA.

PERFECT DIGESTION will be accomplished by taking Kadway's Pills. By their ANTI-BILOUS performance of the schedule ducts. These pills in doses from two to four will quicky regulate the action of the liver and free the patient from these disorders. One or two of Rad-way's Pills, taken daily by these subject to billous pains and torpidity of the liver, will keep the sys-bre regular and secure healthy digestion. e, 25c, per Box. Sold by all Druggists. RADWAY & CO., NEW YORK.

loss of flesh, strength and nerve become apparent your physician will doubtless tell you that the quickest builder of all three is

Scott's Emulsion of Cod Liver Oil, which not only creates flesh of and in itself, but stimulates the appetite for other foods. Prepared by Scott & Bowne, N Y. All draggists.

success is reasonably certain. But do not attempt it without seeing that the soil is rich in nitrogenous matter. Tree trimming is in order, and many large limbs will be cut off un-avoidably. No stump should be left, but the cut should be made close to Put on barnyard manure freely.

SCIENTIFIC FEEDING

but the cut should be made close to the trunk and the wound should be painted thoroughly after as it has seasoned for a few weeks. Left to de-cay in the weather it will soon admit water to the heart of the tree, when rapid and certain destruction follows. Some people make the mistake of SCIENTIFIC FEEDING. A bulletin just issued from Cornell University Experiment Station, on the feeding of steers in Texas, shows the following results: Roasted cotton seed do not have the laxative qualities of raw seed and are more palatable. Faster gains are made by feeding the boiled seed, but at a greater cost per pound gain.

Some people make the mistake of ainting the wound as soon as it is ade. Paint and oil cannot adhere to a wet surface, but will peel off, or will let sap and water blister beneath it, and very soon the application is value-less.—New York World.

per pound gain. The advantages to be gained in the use of roasted seed hardly justify its REMEDY FOR ROUP IN FOWLS.

general use. Boiled seed are more palatable than raw seed, less laxative and make faster gains. May continue to be used with profit. REMEDY FOR ROUP IN FOWLS. This disease is exceedingly con-tagious, and is similar in every respect to the diphtheria of persons. It arises from the same causes, viz., poisoning by bad air or dampness, by which the germs of the disease are encouraged. The remedy lies, first, in removing the cause, making the public have

Steers fed on raw seed, eating a less quantity of seed, ate slightly more

hay in consequence. Cotton seed, at usual prices, is a

The remedy lies, first, in removing the cause, making the poultry house clean and dry, and keeping it as warm as may be. The sick birds are treated by giving doses of powdered chlorate of potash, one small pinch of it being dropped in the throat twice a day. The swelled heads are bathed with warm vinegar, and the mouth and throat washed by means of a soft feather. The house should be well disinfected by burning subhur in it Cotton seed, at usual prices, is a good and cheap addition to corn and hay ration. The best beef ration fours' by pre-vious experiments--cotton seed meal, hulls and silage, is not here proven the best, when calculated at former prices --raw seed, corn and hay being better. When value of raw seed is raised to When value of raw seed is raised to near market present prices, ten dollars per ton, the meal, hulls and silage are again the best ration; raw seed, feather. The house should be well disinfected by burning sulphur in it during the day, keeping it tightly closed for an hour or two while the fumes of the sulphur are acting. All dead birds should be buried deeply, away from the house.—New York Times. corn and hay being next best. The average cost of gain per pound in all lots at present price of food was

3.64 cents. The cheapest feed per pound gained

for all steers fed, when raw cotton seed is valued at \$10 per ton, was raw seed, corn and hay.

FARM AND GARDEN NOTES. Leghorns are among the very best of layers.

According to F. E. Emery, Agri-culturist at the North Carolina Ex-periment Station, the successful calf feeder will use more tact than force in teaching a calf to drink. He will never allow a foolish calf to betray bim into a passion or display of heuto Set the first clutches of duck eggs him into a passion or display of brate force. Do not allow the calf to suck the whole hand or a single finger, but placing the palm of either hand over its nose, gently bring it to the milk under a hen. Proper shelter from storms means regular, even fleeces.

It will pay every grower to learn thoroughly to grade wool.

held in a convenient sized pail in the other hand. By separating the fingers hold back the sides of the tongue and Burs in the pasture are very expen-sive. Get rid of them. insure the entrance of milk when the The less water there is in butter the

calf sucks. If the milk is warm there will be fewer odors it will absorb. The best way to keep root crops is to pack them in sand and put in the cellar. less trouble, then give the calf more, or less, of the two fingers, according to the success in keeping it interested in the milk. When the calf is doing well the fingers will scarcely be touch-ing its tengen on line. If it each cal-

Man's Mechanism

Man's Mechanism. The wonderful mechanism of ani-mals, as Jeremiah Head, mentioned in his British Association address, can be but imperfectly imitated here and there in the works of man, although man has greatly enlarged his powers by the artificial devices. By the com-bination of his natural capacities with the mechanical aids, he has been en-abled to compete successfully in dif-ferent sphere of action with other and specially endowed animals. The bodily frame of man is adapted only for life and movement near the earth's sur-face. Without mechanical aid he can walk for several hours at an ordinary face. Without mechanical aid he can walk for several hours at an ordinary speed of three to four miles an hour, and under exceptional circumstances he has accomplished over eight miles in one hour, and an average of two ond the eight miles and hour for and three quarter miles an hour for 141 hours. In running he has covered about 11⁴/₂ miles in an hour. In its power to withstand diverse and excespower to withstand diverse and exces-sive strain, the human mechanism is quite unapproachable by artificial constructions. While fitted for an ex-ternal pressure of about fifteen pounds per square inch, man has been able to ascend in balloons to a heighth able to ascend in balloons to a heighth of seven miles, breathing air at a pressure of three and a half pounds per square inch; and, on the other hand, has safely dived eighty feet be-neath the water's surface, where the extra pressure has reached about thirty-six pounds per square inch. No ani-mal burrows downward into the earth to a greater dent than eight feet. to a greater depth than eight feet.---Trenton (N. J.) American.

How Sugar is Refined.

The method used by the best sugar The method used by the best sugar refineries is substantially as follows: The raw sugar is dissolved in large cisterns on the ground floor, enough The raw sight is clustoved in large cisterns on the ground floor, enough hot water being added to produce a specific gravity of 1.25. The solution is then drawn through a connecting pipe having a coarse wire strainer in-to large pumps, by which it is pumped into the highest story of the building, usually the seventh or eighth. It there passes into vessels heated by steam coils to a temperature of about 210 degrees. Milk of lime is added to the solution in these pans for the purpose of neutralizing any acid which it may contain. From these pans the liquid passes down to the next floor, where it is filtered through a series of bags, each made of two thicknesses of cloth, an outer one of coarse and an inner an outer one of coarse and an inner one of fine cotton. The bags are en-closed in boxes to prevent cooling. After leaving these the syrup is run through filters of bone black, which absorb all the coloring matter left in the the baying these it is numbed it. After leaving these, it is pumped into vacuum pans, large vessels heated by steam and exhausted by air pumps. The pressure being thus reduced the liquid is boiled at a lower tempera-ture, until, at 140 degrees, evaporature, unit, at 140 degrees, evapora-tion is completed and the syrup rapidly crystallizes into sugar. This is the process by which the best white sugar is made, while poorer qualities are prepared by a method less complete. —Boston Cultivator.

Watts-"Do you always agree with your wife when she makes an asser-tion?" Potts-"Of course I don't. Do you suppose I want the poor woman to have no amusement at all?"—In-dianapolis Journal.

Is Life Short or Long?

If life is so short as some think it is, it may be made to seem much longer and sweeter by a better care for our comforts. Minor troubles are much magnified by neglect and delay. We give too much time to hunting up causes when we ought to deal promptly with effects. This is much the case with pain, which should be cured at once and cause looked into afterwards. Miss Ida M. Fleming, 7 S. Carey Street, Baltimore, Md., states that for years she wassubject to frequent attacks of neuralgia, and tried any number of remedies without avail. She was given qui-nine, which she says affected her nervous system. She suffered night and day during these attacks until she tried St. Jacobs Oll, which finally cured her.

Killing Perpoises by Electricity.

Killing Perpoises by Electricity. Electricity has recently been util-ised for purposes of fishing. A net of sardinal, as it is called, which was nearly 1800 feet long, and is used for electric cable with dynamite cartridges tintervals of fifty feet, was placed pop the edge of it. The cable was connected with an electric battery up-ch the tor pedo boat in such a way that all the cartridges might be fired simultaneously. The net was let down at five in the morning in very deep water, and before this was done the pot of go out, in order that there might be nothing to disturb the por-poises. About an hour after the net had been let down, the pospoises came up in large numbers, and when a good may fish had been got into the net, there were about eighty just around it. The cartridges were then fired, and the explosion was so effective that one only of the eighty porpoises escaped, while the boats in the vicinity felt no shock, and the water was very little disturbed.—Invention.

How to Cure a Black Eye.

How to Cure a Black Eye. The Medical Times some time ago gave this antedote for a black eye: There is nothing to compare with a tincture or strong infusion of capsicum annuum, mixed with an equal bulk of mucilage or gum arabic, and with the addition of a few drops of glycerine. This should be painted all over the bruised surface with a camel's hair pencil and allowed to dry on, a second or third coating being applied as soon penell and allowed to try on, a second or third coating being applied as soon as the first is dry. If done as soon as the injury is inflicted the treatment will invariably prevent the blackening of the abused tissue. The same remedy has no equal in rheumatic, sore or stiff peak neck

Fatal Field for Missionaries.

Sierra Leone, on the west coast o Sierra Leone, on the west coast of Africa, has sometimes been styled the "White Man's Grave," and no fewer than three Bishops in succession died within three years of their consecra-tion. In the first twenty years of the mission's existence fifty-three mission-nies on missioneries' wirse died at aries or missionaries' wives died at their posts. In 1823, out of five mis-sionaries who went out, four died within six months; in the next year six volunteers were accepted, and of these two died within four months of their landing. These hears some d to their landing. These losses seemed to draw out more zeal, for next year three more went forth, of whom two died within six months.-Boston Post.

The Garrote.

The mode of execution by the garotte seems to have been originally de-vised by the Moors and Arabs, and to have been taken from them by the Spaniards, by whom it has been trans-mitted to the Spanish colonies in America. In the earliest form it consisted in simply placing a cord round the neck of the criminal, who was seated on a chair fixed to a post, and then twisting the cord by means of a stick inserted between it and the back of the neck till strangulation was pro-duced. Afterward a brass collar was used containing a screw, which the executioner turned till its point en-tered the spinal marrow where it unites with the brain, causing instant death.

Empedocles was called the greatest f all Greek philosophers, but he

Height of Man in the Year 4000 A. D. De Moreal, the French statistician has been figuring on the gradual diminution of height in the human family with some astonishing results He finds that in the year 1610 the average height of man was 1.75 meters, or about five feet nine inches. In 1790 it was five feet six inches; in In 2100 five feet five inches, At the present time it is but five feet $3\frac{1}{4}$ inches. From these figures it is easy to deduce the rate of regular and gradual decline in human stature. Figuring both ways from the present we find that the height of man "in the we find that the height of man "in the
