Has discovered in one of our common

Has discovered in one of our common pasture weeds a remedy (hat cures every kind of Humor, from the worst Scrofula down to a common pimple. He has tried it in over eleven hundred eases, and never failed except in two cases (both thunder humor). He has now in his possession over two hundred certif-cures of two realms all within twenty miles

SCIENCE IN FARMING.

CORN FOR GROWING ANIMALS. Corn is not a wholesome food for young, growing animals, especially colts. It should not be fed exclusive to calves or pigs at the time when they are making home or muscle, or to work horses. —New York World.

BUCKWHEAT TO CLEAN LAND. There are several reasons why the buckwheat crop is a good one to de-stroy weeds. It requires plowing and fitting the land at midsummer, when weeds are most easily killed by plowweeds are most easily kneed by plow-ing. It grows so rapidly that it very quickly covers the surface soil, shad-ing it so that few weeds can start un-der its broad leaves. It is equally good to rid land of insect enemies. Wire and cut worms find its roots dis-tasteful to them, and for land that is filled with the wire worm two crons filled with the wire worm two crops of buckwheat will rid it of most of them. Yet for all this buckwheat is It is habit of seeding the ground with back farmors. Its habit of seeding the ground with buckwheat, which will appear in the next grain crop, makes it a trouble-some weed, though as it is only an an-nual one year suffices to get rid of it. —American Cultivator.

-American Cultivator.

CAUSE AND CURE OF BLOODY MILK.

The new era for the latter has just begue. In no domain of human ac-tivity lies greater scope for genius than in agriculture. No other calling is so conducive to health, longevity, and happiness. Science lays discov-eries at the farmer's feet and implores their use. Ear him the chemist toils This disease is due either to de rangement of the action of the liver, or in some cows is the result of ab-normal action of the milk glands. Some cows suffer from it in consetheir use. For him the chemist toils in his laboratory. For him the bot-anist gleans the fields. For him the inventor has simplified labor and en-lightened toil. For him scholars and experts employed by the Government quence of overfeeding, by which an inflammatory condition of the udder is produced, thus exciting the action of the milk glands, which, on account of the udder being overcharged with blood, secrete some of this blood, which mixes with the milk. This blood would are ever at work at State and National experiment stations to solve the prob-lems of the soil. The broad-minded otherwise be milk, for milk is a direct product of the blood, and if the udder were in a normal condition the blood agriculturist who avails himself of these researches and discoveries is a man to be envied. We may yet attain the art of making malleable glass, and would be changed into all by the healthful action of the glards. Some-times the liver is so disordered by overfeeding of rich food that the blood is not sufficiently purified and in this case the impurity of the blood sceanes threach the milk instead of the art of making malleable glass, and under such protection acres may be devoted to the growth of vegetables and semi-tropical fruits for our local markets. Rapid transit and improved refrigerator cars will enlarge the ter-ritory to be supplied. The broad belts of the temperate zones extend-ing round the world will be explored in search of new varieties of grain, trees, flowers, and shrubs for our use. The laws of animal breeding and her-edity will be better understood and our domestic stock be greatly im-In this case the impurity of the block escapes through the milk, instead of, as at other times, through the kid-neys, when the disease would appear as red water. At times this fault in the secretory function is constitution-al, and a heifer may always give al, and a heifer may always give bloody milk, and may continue to do so, thus being useless in the dairy. That this kind of milk is wholly ab-normal is shown by the fact that calves will not drink it. The treat-ment should be by laxative and cool-ing medicine, such as ensom salts, give our domestic stock be greatly im-proved. America will possess the finest cattle in the world, and the States fitted for cattle raising and dairying will vie with one another for the leadership. The electric age will materially iming medicine, such as epsom salts, giv-en in half-pound doses daily for a few days, after which the system will prob-ably be relieved of the undue strain

on the secretory organs, and the milk be all right.-New York Times.

the leadership. The cleatric age will materially im-prove the condition of the agricul-turist. I look for the day when each farmer will own an electric equipment to furnish power for his creamery, for grinding food, for pumping water, for lighting his house, and for heating his greenhouse and other buildings. Electric roads will pass his door, af-fording quick transit for himself and his produce to the nearest market town. His horses will labor on the farm while he journeys on the high-way in a wagon propelled by a storage battery. The subtle energy can be made to serve him in a thousand ways and perform innumerable tasks. By its kindly aid the hitherto overworked farmer may become largely a "gentle-man of leisure. Then we shall expect much of him. Then 'will he have lib-erty to assume that political import-ance to which he is justly entitled. The successful farmer should be the coming man, and future legislation must look closely to his interests. If is a notable fact that many of our best and ablest men have exhibited a strong predilection for rural life. Webster delighted to retire to Marshfeld; the the name of Jefferson recalls Monti-cello; Jackson reminds us of Hermit-age; Clay is associated with his be-loved Ashland; Mount Vernon has THE FARMHOUSE AS A BOARDING HOUSE I was reading an article not long since, said Mrs. H. A. Whitman before the Androscoggia (Me.) Pomona Grange, upon "Farmers should pro-vide separate cottages for their hired men," which, I think, deserves more than a passing thought. The writer than a passing thought. The writer said: "Do merchants generally board their clerks? Do manufacturers usually impose upon their wives and daughters the necessity of furnishing meals and beds for their begrimed and meals and beds for their begrimed and sweaty laborers from forge and loom, of serving them at table with their food and sharing their company at the fireside! Why should the wives and daughters of farmers be expected to do this? And so long as such a burden is laid upon them, is it strange that farmers' sons rebel against their lot and seek the city, and farmers' daugh-ters set their caps for clerks, mechan-ics, tailors, speculators—anybody but their schoolmates? "The introduction of hired men

"The introduction of hired men "The introduction of hired men into the household destroys the family relation. The farmhouse becomes a boarding house, in which the husband is steward, the wife cook and the workmen boarders. The employed be-comes the served, and the employers becomes the served, and the employers cello; Jackson reminds us of hermit-age; Clay is associated with his be-loved Ashland; Mount Vernon has been rendered classic ground as the abode of the Father of his Country. With the advance of this new era, from our rural homes, beautified by nature and adorned by art, saving inservants. No well-bred woman can tolerate such a condition of things un-less her ambition is crushed." duences will come in the future to guide and guard the future of the Reless her ambition is crushed." There is many a woman in the land who has cooked tons of food for "the hired men," who, while her husband has grown well-to-do and been elected Justice of the Peace and gone to the Legislature, has become thin and fur-rowed with drudgery, bent to a furi-ous and never-ending rotation of scrubbing, baking, stowing for the hired men. public. Boiled turnips are excellent for the hens. To keep moths out of the hives make the entrance as small as possible. hired men. The average farm horse suffers more This wretched community system has prevailed long enough in America, to the amazement of foreigners and from poor care than he does from hard work Cut out and burn the dead canes

HOUSEHOLD AFFAIRS. TO CLEAN DECANT

Mix a teaspoonful of fine coal dust with half a teacopiul of vinegar; put this in the article to be washed; shake vigoroualy, rinse with clean water un-til it appears perfectly clear, and set it upside down in a jug or basin to dry. Small bird shot and vinegar is dry. Small equally effica

SIMPLE BUT POPULAR DISH.

Bake cottage pudding in gom or pop-oven pans, thus giving to each person an individual pudding. This way not only adds to the attractive-ness of this simple but popular disb, here of this simple out populat visit, it as often happens, a careful hostess attempts to out the pudding with a steel knifo when hot from the oven. The usual sauce accompanies the individual serving.—New York World.

HEMMING TABLE LINEN.

good quality of being an excellent ab-sorbent. By using straw liberally for bedding one may reduce the discom-fort of animals in poor shelters and avoid the waste of liquid excrement, while giving the animals a comfortable bed upon which to rest. Warm, com-fortable shelters can be made out of straw; and, while they are not so dur-able and handsome as those made of wood, they are within the financial reach of many that cannot well build expensive shelters. Likely the most profitable use to which straw can be put is to form a comfortable shelter for farm animals that otherwise would be exposed to the severities of the winter. Finally, rotted straw has a fertilizer value that makes it highly profitable to save it carefully.—Ameri-can Agriculturist. A dainty woman will never hom her table linen by machine, but she will hem it by hand with the neatest possible stitches. Napkins and table-cloths now have half-inch hems. The cloths now have half-inch hems. The very narrow hems even for napkins are a thing of the past. Creats and initials consequently have to be placed higher on the napkins, and the napkin when laundered is folded larg-er. Tablecloths should be marked at each end two feet from the edge of the table, which will bring the design a few inches from the centerpiece. The newest linen has a plaid center, with either a simple flower border or a plain band. Elaborate centerpieces never look so well as when placed on

Frank W. Hawley, one of the gen-tlemen interested in the Niagara Elec-tric Power Company, and a scientific farmer, has a model place near Roches-ter, N. Y. Writing on the subject of the farmer of the future, he says: The new era for the farmer has just becaus. Un no domain of human acnever look so well as when placed on a plain surface. Round centerpieces continue to be used with the round dolles for luncheons. They are more beautiful than ever, and many are made of real lace, with only the centers of linen, which are embroid-ered with the crest or initials. Pure white centerpieces are the most popu-lar __Chicago Times-Herald. lar. - Chicago Times-Herald.

FLANNEL PETTICOATS.

Some busy-fingered women who are fond of the crochet needle make a practice of knitting flannel petticoats of soft woolen yarn. These are very warm, and are prettily made of a pale color. A scallop finishes the lower edge, and the drawing string of rib-bon can be drawn through availat halos bon can be drawn through eyelet holes at the top formed in the crocheting. The wash ribbons that one finds now in the shops are very pretty, and are very convenient for trimming under-wear. Light-weight flannel skirts are wear. Light-weight haunce satisfies are suitable finished with a knitted lace made of Saxony yarn in white, or any shade that matches the flannel. This lace can also be knit of silk. The fancy for tatting is again revived, which recalls to mind a lovely silk tatting edging shout an inch and a which recalls to mind a lovely silk tatting edging about an inch and a half wide, which I saw some years ago on a silk and wool flannel petticoat. The hem and all of the searas were feather-stitched with heavy twist. The embroidered flannels in the shops are rather clumsy to be made of the full width at the top. To avoid this, the side with the embroidery can be torn off with a margin, having a width of five or six inches, including the em-broidery. A regular gored skirt can now be cut from the flannel, to which the picce torn off can be sot on as a

the piece torn off can be set on as a ruffle. A casing is made at the top, through which is drawn ribbon for tie strings, or a narrow fitted yoke can be used. Feather stitching can be put on all of the seams. Still another style is a regular gored

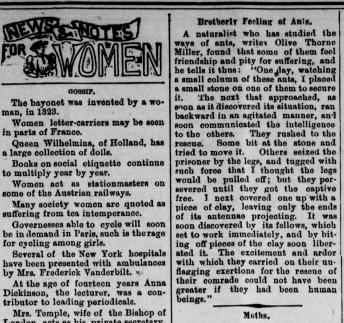

Still another style is a regular gored skirt of flannel lined with silk to pre-vent its clinging. At the bottom can be a facing of ribbon, and it can be edged with a rufile of lace, fine tor-chon being very handsome for that purpose.—New York Examiner.

GOOD HEALTH AT SEVENTE. THREE YEAR'S OF AGE.

Miss Cornwall's Wonderful Recovery of Health--Becamo Well in Two Months Atter an Illness of Six Years.

From the Register, New Haven, Conn. From the Rejister, New Haten, Conn. In this rapid ago of ours when so many men and women are old at fifty, one whe has lived three-quarters of a century, and then, after debility and suffering, regains health and vigor, must be regarded with a feeling akin to wonder. A Now England indy has been found who has had this re-markedbe description.

markable experience. In the family of Clarence Williams, a Che shire farmer on the Meriden road, Cheshire

 markable experience.
 In the family of Clarence Williams, a Cheshire, farmer on the Meriden road, Cheshire, Ct., lives Miss Cornelia Cornwall, a lady geventy-three years of age. For several years Miss Convall's health has been de-ellining very rapidly, caused by a general de-bility. Her friends feared that the respected lady had not long to live; but a kind Providence directed the aged lady, and in a news-apper advertisement Miss Cornwall read about Dr. Williams' Pink Pills—a few bores of which she procured at once, and with the result that is best told in her own words.
 "About six years age," Miss Cornwall began, 'my health commenced to fail. I suffered from loss of appetite and palas in different parts of my body. My condition gradually grew worse until my limbs were apparently unable to bear my weight, and I could no longer go up staffs without the assistance of some one.
 "I consulted physicians who preseribed medicines for my blod. These I continued to take for several months, but without any effect. The sense of feeling in my lower limbs seemed to be leaving me, and I began to fail run it was still suffering terriby from the palast through my body. When I chanced to read the story of a cure that had been effected with the use of Dr. Williams' Pink Pills for Pale Popie. I discovered that the town druggisthere had none on sale, so I sent immediately to the headquarters in Scheneertady. N. Y. and secured two of the boxes of the pills."
 "Tast becember I commoned using the pills regularly, and a month after J had been effected pills. The yealth and been enderted by their vs. The feeling in my limbs came back again, and The two months I was able to go about the house as I had been every much benefited by their use. I still continue to take the pills, rough there is not so much needs that the ty take Dr. Williams' Pilk Pills. A number of the bodod, I consider the Dr. Williams' Pink Pills. They did so, and they tells areonder the they have been eve "sugaring." Sugar is dissolved in beer and ap-plied to the trunks of trees, and when a light is thrown on the tree the moth will drop into the net beneath. The eggs of the moth are gathered by many and carefully guarded through all stages until the moth is developed. Some moths lay only one erg, othes

John A. Chittenden, of Ashley, Mich., on his death bed, requested that his sister, Louise, and her be-trothed, Charles A. Holmden, be married over his cofin. The wedding originally was to have taken place some weeks hence, but the date was

some weeks hence, but the date was changed to comply with the wish of the dying man, and while he lay in his coffin his sister and her sweetheart joined hands over the coffin while the Rev. John Glase performed the mar-riage ceremony. Then he delivered the funeral oration, and the newly married couple occupied tho first car-riage behind the hearse,—Cleveland Leader.

the disgust of our own people. It is high time that every farmer with a particle of personal sensibility or infrom among the raspberries and black berries. Save the ears from the largest and dependence, or with any respect for the rights of his companion, should adopt a better way.

earliest maturing corn plants for next year's seed. The farmers who have held on to

FARM AND GARDEN NOTES

Adopt a better way. THE VALUE OF STRAW. The abundance and cheapness of some good, profitable use may be found for all of it, writes J. M. Stahl. If fed in connection with cottonseed or linseed meal, malt sprouts, bran, etc., which are rich in the elements in which it is deficient, it has a fair feed-ing value. The potential feeding velue of oat straw equals that of sixty-five per cent. and wheat straw fifty-five per cent. of its weight of average meadow hay. But to make the poten-tial feeding value of straw near actual it must be cut, moistened and mixed with such feeds, rich in protein, as are enumerated abore. Cattle fed on straw alone, o. nearly so, cannot pay anything for the straw, for it is so de-ficient in the muscle formers that an animal cannot digest enough straw lows to crear arow or scan to hold its

to water house plants, and let the water be about the temperature of the room. Setting pots in dishes of water is not a good plan, as the roots be-come saturated and have a tendency to rot. All water should be applied at the surface.

ficient in the muscle formers that an animal cannot digest enough straw alone to grow any, or even to hold its own. However, if fed as just stated with such feeds as will make a well-balanced ration, straw has an actual feeding value far too great to justify the waste of any of it. If it is not a good plan, as the roots be-come saturated and have a tendency to rot. All water should be applied at the surface. Buckwheat can come after another crop very well without extra fertiliz-ing. It is an excellent crop to sow on have been destroyed by bad weather. Such land seeded to buckwheat right away will help the owner out of his diffi-culty and save him from the entire loss of his crop.

Vegetable Salad-Place nice crisp lettuce leaves in salad bowl, cut in science leaves in salad bowl, cut in slices cucumbers, young onions and radishes and put on the lettuce. Pour over all one cup of vinegar, one tea-spoonful of dried muturd, one teaspoonful of dried mutard, one tea-spoonful of sugar, and salt and pepper. Grandma's Sugar Cookies—One cup of sugar, three-fourths of a cup of butter, one-quarter of a cup of milk, two eggs well beaten, three teaspoon-fuls of baking powder, a pinoh of salt, half a teaspoonful of cinnamon, flour enough to roll. Cut in round cakes, sprinkle with sugar and bake in a quick oven.

Scotch Sarcasm.

oven.

Scotch Sarcasm. The Scotch keeper has but little consideration for the feelings of the mateur sportsman. A novice from the South was out on a moor in the West Highlands the other day, and having unsuccessfully fired twice at a covey of birds that rose less than twenty yards ahead, he exclaimed ex-oitedly, "It's strange that none of them fell. I'm politive some of them must have been struck." "I'd dinna doot," returned the keeper, with a sarcastic grin, "that they were struck wi' astonishment at gettin' off sae easy."-Realm.

intended to be worn.

A Giant's Trouble. He was a giant in size, the picture of health and strength, with iron muscles, a famous athlete. He pursued his training excessively to hold his fame, and doubtless trained too to hold his fame, and doubtless trained too much. With all his exercise the man was nervous, restless and sleepless, and then racking pains took hold upon him. Ho could not understand his condition, for neuralgia had set in when he thought himself in perfect health. So in all conditions it will take hold of the nerves. They had been en-feebled in his case, and they are enfeebled in a thousand cases in as many different ways. He was well advised and followed directions of experienced people. Soon his nerves began to be toned and quieted and in a short time the pais ceased and followed directions of state cases of the state of the source of lowed, and so will if follow in all cases and conditions.

The doctors tell us, now-a-days, that disease germs are everywhere; in the air, in the water, in our food, clothes, money; that they get into our bodies, live there, thrive and grow, if they find anything to thrive on.

Consumption is the destruction of lung-tissue by germs where the lung is too weak to conquer them. The remedy is strength—vital force.

Scott's Emulsion, with hypophosphites, means the adjustment of lung strength to overcome germ-life. It is fighting the germ with the odds in our favor. These tiny little drops of fat-food make their way into the system and re-fresh and re-invigorate it. Whether you succeed with it or not depends on how good a start the germs had, and how carefully you can live. The shortest way to health is the patient one. The gain is often slow.

SCOTT & BOWNE, chemists, 50 cents and \$1.00 New York
