

**Gets a Medal for Speed.**  
Engineer William Tunkey, who pulled the Lake Shore record-breaking train from Erie to Buffalo last October, has just been given an elaborate silver medal by W. K. Vanderbilt and W. Seward Webb. Mr. Tunkey's ability as an engineer saved this trial of speed from being a failure, for when the train reached Erie it seemed irretrievably behind the scheduled time, and Mr. Tunkey's quick work saved the day. The medal given to Mr. Tunkey is of solid silver, weighs nearly two pounds, and is a work of art.—Scientific American.

**Hired Swains.**  
A curious custom prevails in some provinces of Holland during the carnival season. Young women of the working class, especially domestic servants, who have no sweetheart of their own, are in the habit of hiring "followers" for their Sunday out, or for the whole of the carnival period. These lovers are by no means to be had very cheap. Often two or three maids will club together and share a lover among them if he comes too expensive for one girl.

This temporary lover has many duties to perform. Of course, he must be good looking and well dressed, and an efficient and indefatigable dancer, "fit to be seen with anywhere," he must likewise possess good conversational powers. Besides receiving a variety of valuable presents from his "girls," he is "found" by them in victuals and drink. If a young woman can afford to engage a "swain" all to herself, so much the better, for the hiring often develops into a real lover and ultimately into a husband. It can thus be said that, in some districts of Holland, the girls do all the wooing.—Buch fur Alle.

President Clements R. Markham, of the Royal Geographical Society, has probably risked his life oftener than any other civilian in Great Britain. He is a great adventurer and was trained in the navy with McClintock, the illustrious Arctic explorer, as a comrade.

**Frost, Frolic and Business.**  
The wind over frozen ponds and lakes, or snow-fields of plains and open country, is heavily charged with frost and fine particles of frozen matter. It is the most penetrating and way for chilling to set in. Sudden frosts, sudden chills, and severe colds. Girls and boys skating, driving for pleasure or business, and men at work attend know the difference in temperature. Yet the youngsters skate away and with mouth open laughing take in a dose of sorethroat. Drivers and workmen throw aside wraps and all know the next day from soreness and stiffness what sudden chill means. Now the best thing to do when housed is to rub well at once with St. Jacobs Oil. If you do, you will not have sorethroat or if you are stiff and sore, it will cure by warming the surfaces to throw out the chill.

The bicycling clubs of New York State have an estimated total membership of 75,000.

The object of the manufacturers of Dobbin's Electric Soap is to give you the best soap of such superior quality that it will give universal satisfaction. Have they succeeded? Ask your grocer for it. Take no other.

The gold mines of Cherokee, Ga., are now engaging the attention of English capitalists.

Is the One True Blood Purifier. All druggists. \$1 Prepared only by C. I. Hood & Co., Lowell, Mass.

Hood's Pills are purely vegetable, carefully prepared. 25 cents.

**OPIMUM** Morphine Habits Cured in 10 to 20 Days. Dr. J. STEPHENS, Lebanon, Ohio.

# FARM GARDEN

**DRY EARTH ON FERTILIZERS.**  
A few inches of dry earth over a pile of fermenting manure will effectually prevent loss of ammonia. This is a much more common cause of loss where manure is piled than is leaching. We doubt whether during summer and until cold weather the piles of manure left out of doors get more rainfall than is good for them. This is especially true of horse manure, which will burn into ashes and lose most of its manurial value if kept where rain cannot reach it. The waste from leaching of manure occurs mainly in winter and early spring, when the melting of snows and heavy rainfalls drench the manure with water.—Farm, Field and Fireside.

**A SUCCESSFUL TENANT FARMER.**  
I began on a run-down Vermont farm of 165 acres with thirteen cows, two yearlings, two shoats, ten hens and now have fifteen cows, three springers, six yearlings, fourteen hogs, eight hens, and plenty of rough fodder to keep them, writes L. S. Glynn. This year I sowed five acres of fodder corn, planted eight acres of oat corn, began feeding green fodder August 1 and roots later on, and am now feeding cured fodder and about seven pounds of grain (composed of equal parts of corn, wheat bran and gluten meal) three times a day to each cow. Am milking thirteen cows, six of them in the Marshall creamery. Last year the hens brought in about \$60. Next year I shall sow ten acres of Sanford corn, having raised my own seed, and am working to keep forty cows on this place. I am in favor of the silo but cannot afford one on a rented farm, so will run my fodder through a shredder. I think siloing is the only way to bring up a farm. I shall try sowing about four acres of oats to cut green and make hay of, and shall experiment with milk, and have a large amount of it adapted to its use. The great trouble with farmers here is, they are too apt to sell their stock if short of fodder. Now I am in favor of buying grain and keeping the stock, as more stock means more hay, and more hay means better farms.—American Agriculturist.

**TO DRAIN A CELLAR.**  
A cellar in wet soil must necessarily be drained so as to prevent the water from rising in it through the floor. It is not the surface water that settles down into it, but the subsoil water that is forced up by the pressure of the outside water sinking from the surface. So that by laying a drain tile all around the cellar under the walls the drainage is not complete. Several drains should be laid, one all around close to the foundation and some cross drains about six feet apart in the cellar floor and connecting with the main drain at the walls. These drains should be at least sixteen inches below the floor of the cellar. Somewhat especially if it is of brick, and to prevent the water from seeping through the outside should be thoroughly saturated with hot tar to make them waterproof. This should be done with every cellar wall when a house is built, as it is a costly job to do afterward, but easily done at the right time. In laying a cement floor in a cellar it should be done in this manner: First, a layer of coarse gravel or broken stone is well rammed down and made level and smooth. Then the same kind of material is wetted and mixed with one part of cement mortar to six of it, and this is laid at once in small quantities, as it is made, and smoothed and beaten down with a broad rammer to make it solid and firm. This material is mixed in small quantities as it can be laid, or it will harden prematurely. The finishing coat is made of a coat of the mortar and two of good sharp sand, laid one inch thick. It is smoothed with a piece of board having a suitable sloping handle, which is rubbed back and forth as the cement is wetted with water. This gives a nice, smooth finish.—New York Times.

**THE EFFECT OF SALT ON MILK.**  
Salt given to cows has some effect on the quality of the milk. This is necessarily so, as the salt aids very much in the digestion of the food, and it is the quantity of the food digested that regulates the quantity and quality of the milk. Salt is indispensable to the health of any animal that feeds on vegetable matter, and the milk is affected greatly by the health or opposite condition of a cow. When salt is given to excess, it is injurious and causes an intense thirst, but this does not necessarily make the milk more watery than usual. If the cow drinks more water than is customary there is no reason to believe that this excess of water dilutes the milk. The milk is not made in any such way as would make this possible. It is produced by the breaking down of the glandular tissue of the udder and this never contains more than a normal quantity of water. The kidneys are charged with the removal of any excess of water from the blood, and this drain, or outlet, if in good working condition, will always attend to its own business, and if it does not or cannot, for any reason, the milk glands cannot perform their function, but the cow becomes diseased at once. But is it this question that the careful farmer will never have to consider, because he will always take care that such a supposed mistake will never happen. It is only the careless farmer who runs risks of giving his cows, or permitting them to get, too much salt.—Farm and Home.

**STRAWBERRY CULTURE.**  
As to planting strawberries, about which we have many inquiries, there are several ways. Of course, the ground must be dug a good depth, and pulverized carefully, having applied a liberal quantity of barnyard manure. The beds can be marked out three feet wide and made as long as may be desired. Let the footpaths between the beds be eighteen inches apart and remove from them all the runners as fast as they encroach. Set the plants firmly but not too deeply in the ground, one foot apart each way. Get any of the following varieties: Captain Jack, Seth Boyden, the Great American, the Monarch of the West, or Triomphe de Gand, for private purposes. If a crop is wanted exclusively for marketing choose the Albany Seedling by all means. It will produce generally a greater quantity of fruit than any other and will bring in the most money. Strawberry beds can be planted out as early as the ground can be got in suitable condition.

Many persons prefer the hill system of planting out strawberries, and with some very strong growing varieties it is probably the best. When this is adopted the plants should be set two feet apart each way. But from our own experience we prefer the broadcast planting. The plants keep the ground moister, it requires less labor to cultivate, and the beds last twice as long by producing new bearing plants every year. The disadvantage is, the weeds cannot be removed so easily. In the hills the old plants are fruited year after year, and as a consequence the berries yearly get smaller.

One thing must be particularly borne in mind: The beds must be kept clear of weeds. Two weeks after the crop has been secured, say some time in July, mow off the vines, not so closely as to injure the crown, and let them remain as a mulch. Late in the autumn the beds should be covered with straw or light manure; and in the spring the very coarsest portions should either be removed or carefully placed about the plants. When this is done, should the plants have been disturbed by the frost, pass over them

**Antelope Fast Disappearing.**  
Sioux Indians are slaughtering deer and antelope by the hundred along the North and South Missouri Rivers and among the Slim Buttes and Cave Hills, in South Dakota, according to the stockmen in that region. It is reported that more than 400 hides of antelope were seen in one Indian camp recently, and the whole region is scattered over with carcasses of deer and antelope, the Indians killing the animals solely for the hides. The stockmen say that these animals will soon be exterminated in that region if the Indians are permitted to continue their ruthless slaughter.

**The Largest Bicycle.**  
What is said to be the largest bicycle in the world has been made by a bicycle company in Providence, R. I. It is made to carry six persons. Its length over all is 165 inches, and its wheel base is 125 inches. The diameter of the wheels is thirty inches, the tires are 2 1/2 inches in diameter, the gear is compounded to 153, and the machine weighs 137 pounds.

**A Hog Sold for \$800.**  
Iowa's prize hog, "King Medium," belonging to a famous Poland-China herd on J. A. Benson's "Norwood" farm in O'Brien County, that State, was sold this week for \$800, probably the largest price ever paid in this country for a hog. The rest of the herd averaged \$70 a piece.—Washington Pathfinder.

The rest of the herd averaged \$70 a piece.—Washington Pathfinder.

**COULD NOT EAT PEPTONIDS**  
BUT PINK PILLS MADE IT POSSIBLE TO EAT ANYTHING.  
Get Your Digestion Right and Your Health Will Take Care of Itself.  
From the Star, Washington, D. C.  
"Dr. Williams' Pink Pills miraculously cured me of two diseases and have otherwise done me vast amount of good."—Mrs. E. A. Mosher, of No. 207 Third Street, South Washington, D. C., to a Star reporter today.

"For many years I was a sufferer from muscular rheumatism in its worst form, and in addition had stomach trouble to such an extent that for a long time I could eat nothing stronger than beef peptonids. The rheumatism commenced in my back and not only extended into my left arm, almost paralyzing it from the shoulder to the elbow, but attacked my hips and limbs with such vehemence that it was impossible for me to go out on the street without being supported by an attendant for our blood, and when this prescription runs out you can send for me, but I will not again call until I am cured."

"I was attended by four different physicians—not all at one time—of both the allopathic and homeopathic schools, and there were many times when I was so weak that my neck to my feet with porous or some other kind of plaster, for I tried everything of the sort that was recommended by my physicians."

"During the greater part of this time my husband and son were urging me to take Dr. Williams' Pink Pills but I steadily refused to do so."

"About two years or two and a half ago, the physician who was then attending me, and I have had none since, said to me, 'Mrs. Mosher, there is no use for me to come and see you any more, you have muscular rheumatism, a disease incident to old age, and you cannot be cured. I will give you a prescription for our blood, and when this prescription runs out you can send for me, but I will not again call until I am cured.'"

"I want to say that when I began taking the Pink Pills it was with the least faith in their efficacy for good or belief that they would benefit me, but simply to please my husband and son by taking something. However, I took them as directed by the makers, and about the end of the month I found, to my great surprise, that my stomach was so much better that I had no longer to subsist on beef peptonids, but could begin to include in my diet solid food."

"So I told my husband that as the Pink Pills were evidently doing me good, I would try them for another month. I continued to use them as directed, and during the second month my eyesight, which had been very bad for a long time began to improve, and I felt much more pleasant for me to go on the street, though I still had to be attended on account of my weak limbs."

"How many boxes of the Pink Pills I took in all I could not be sure, but I was pleased for a week at a time. But from the time I commenced until I felt I could safely cease taking them was about fifteen months. Since then, 'Sometime' after my eyesight began to grow better, my memory, which had been defective and caused me much trouble for a long time, returned, and became as good as when I was a young man. During the period to which I refer I had great difficulty in remembering where I had put anything, but, as I said before, this trouble entirely disappeared and has never returned, while my eyesight also continues excellent."

"My long continued illness had reduced my weight from between 130 and 140 pounds to 112 pounds, but while I was taking the Pink Pills I gained 39 pounds, and I now weigh 151 pounds."

"My friends freely asserted that my flesh, as they noticed my increasing weight, was not solid and predicted that I would speedily lose it. Such, however, was not the case, and I have not lost a single ounce of the pills since last December. All my rheumatism having by that time disappeared, since which time I have had no return of the disease, and I visit me again, but if it does, I shall again resort to the use of Dr. Williams' Pink Pills."

"My own experience with Dr. Williams' Pink Pills I have not hesitated to recommend them to others who were afflicted. My niece, who lives near Hillsboro, Londonderry County, Va., was afflicted with this peculiar disease of the hips and limbs. I believed the medicine which did me so much good would cure her also, and I bought three boxes of them and sent for her. She took them and was cured completely of her complaint."

"Dr. Williams' Pink Pills contain all the elements necessary to give new life and richness to the blood and restore shattered nerves. They are sold in boxes (never in loose form) by the dozen or hundred at 50 cents a box, or six, and may be had of all druggists or directly by mail from Dr. Williams' Medicine Co., Schenectady, N. Y."

**"Half-Hanged Maggie."**  
A curious instance of the hangman's rope failing to perform its fatal work gave to Margaret Dickson, an English woman of a century and a half ago, the nickname of "Half-Hanged Maggie," a name by which she was known throughout the British Isles. Maggie had been convicted of some capital offense (there were several such offenses catalogued in the English statutes at that time), and was finally taken to the gallows on the hill at Edinburgh. After the drop fell she was allowed to hang several hours before friends claimed the remains and started with them in a cart for Musselburg, six miles away. On the way some drunken apprentices rudely halted the cart and opened the coffin in order to see the woman who had been hanged. This let in fresh air, and the air and jolting of the cart combined to revive the supposed dead woman long before the home of the relatives was reached. Arriving there she was carried into the house, alive, but very faint and barely conscious. A minister was called to pray for her, but she soon recovered sufficiently to demand that the preacher be dispatched for a doctor. The physician, however, arrived and was never again, tried or even arrested for her crime. Later on she married and became the mother of several children. She lived to be quite old, but the nickname of "Half-Hanged Maggie" stayed even after death, being engraved on the sandstone slab that marked her grave.—St. Louis Republic.

**HOUSEHOLD AFFAIRS.**  
**FURNITURE POLISH.**  
Here is a recipe for making a good furniture polish. Take equal proportions of linseed oil, turpentine, vinegar and spirits of wine. Mix well together. When used shake the mixture and rub the furniture with a piece of linen. Then polish with a clean soft cloth.—New York World.

**LAUNDERING EMBROIDERY.**  
See that the silk handkerchiefs, scarfs, etc., are washed by themselves and not placed with linen articles to be laundered, no matter how fine and dainty the articles may be, with their delicate embroidery. Soak the silk articles in lukewarm water for a couple of hours. After soaking squeeze lightly with the hands, and if still soiled soak in warm water in which a little good soap has been dissolved. If it can be avoided do not rub soap on the silk, no matter what the quality. After a second washing and rinsing give a third rinsing in lukewarm water, in which a little common salt has been dissolved. The salt will help to set the colors in the silk and in the embroidery, giving the whole a brighter appearance than if simply rinsed in clear water. Press the handkerchiefs with a warm iron before they are perfectly dry.

**SOUPS MADE EASILY.**  
Soups add much to a dinner, and involve neither the time nor the expense that young housekeepers imagine. A soup kettle will take many bits that cannot otherwise be made use of, and a common stock is a foundation for many sauces, soups and gravies. A soup stock should be cooled quickly, and left uncovered until perfectly cold. Cream soups are made with and without stock, and have come into great favor, largely taking the place of clear soups.

To make green pea soup without stock: Turn a can of peas into a large saucepan and cover them with hot water. Add a small onion sliced and let them boil until the peas are soft. Mash them and add a pint of water. Melt two tablespoonfuls of butter and stir into it one spoonful of flour. Stir until smooth and add to the cooked peas with two cupfuls of rich milk. Season with salt and a little cayenne pepper. Let the soup boil up once after the milk is added; then rub through a coarse sieve and serve with tiny squares of fried bread.

To make croutons, or fried bread, for soups: Cut bread into slices a quarter of an inch thick, remove the crust, and cut the bread into cubes and fry them in smoking hot melted butter until they are crisp and golden brown in color.

To make a thick tomato soup: Put into a saucepan a quart of canned tomatoes and add a pint of water, one bay leaf, some pieces of celery, and a teaspoonful of sugar. Cook slowly until the tomatoes are soft. In another saucepan put a tablespoonful of butter, and when it is hot add a sliced onion and fry to a light brown. Stir into this a tablespoonful of flour and a little of the juice of the tomato. Add this to the cooked tomatoes. Season with salt and a dash of cayenne pepper. Rub the whole through a sieve and reheat before serving.

For cream of celery soup: Wash a bunch of celery and cut it into pieces and boil it in a pint and a half of water forty minutes. In another saucepan heat to boiling a slice of onion and a small piece of mace in one pint of milk; mix one tablespoonful of flour with one of butter and moisten with two tablespoonfuls of cold milk and add to the boiling milk. Cook ten minutes. Add the cooked celery and water in the cooked milk and season with salt and pepper. Strain and serve. A cup of whipped cream added after straining makes the soup much richer.

To make cream or barley soup: Put in a granite kettle three pints of white stock, an onion sliced, a small piece each of cinnamon and mace, and one teaspoon of barley. Allow these to cook very slowly four hours, then rub through a sieve and add one pint of boiling milk and half a pint of cream. Season with salt and cayenne pepper. The yolks of two eggs beaten light with two spoonfuls of cream and added to the boiling milk just before the soup is taken from the fire make it very much richer.

To make bisque of tomato: Put in a saucepan one quart of tomatoes and an onion sliced. Place them over the fire and let them stew fifteen minutes. Meanwhile put over the fire in a double boiler one quart of milk. Cream together two tablespoonfuls of flour with the same quantity of butter and add to the milk when boiling and stir constantly until it thickens. Rub the tomatoes through a sieve and return them to the fire. Add a teaspoonful of sugar and salt and pepper to taste. When it is time to serve add half a teaspoonful of soda to the tomatoes and then the boiling milk. Stir quickly and serve at once. The soup must not stand after the ingredients are put together. Serve croutons in the hot soup.

Any one who likes onions will enjoy the following simple soup, which is quickly made: Slice two or three good sized onions and fry them in a little butter until they are soft, then add three tablespoonfuls of flour and stir until it is a little cooked, but not brown. To this gradually add a pint of boiling water, or stock if you have it, stirring all the time so it shall be smooth. Boil and mash three good-sized potatoes and stir in them one quart of boiling milk. Stir the two mixtures together and season well. When very hot pour through a colander into a tureen. Sprinkle over the top a tablespoonful of parsley, chopped fine, and a little fried bread. For egg balls to put into soup: Boil four eggs until hard. Drop them in cold water, and when cool remove the yolks and mash them to a paste. Season with a little salt and pepper and mix the paste with the white of one raw egg. Form the paste into balls the size of a hazel nut, roll them in flour and fry to a light brown in hot butter.—New York Sun.

To Prevent Cold Feet.  
Plunge the feet into cold water, rub briskly and quickly, put on your stockings and shoes, is a formula which followed will insure you against cold extremities when you go out.

**Earliest Vegetable Always Fays.**  
That's so, the editor hears Mr. Mariot Gardner say. Well, why don't you have them? Simply because you don't plant Salzer's Northern grown seeds. His vegetables are bred to earliness and they never disappoint you. Salzer is the largest grower of vegetables, farm seeds, grasses, clovers, potatoes, etc.

**How's This!**  
If you will cut this out and send it to the John A. Salzer Seed Co., La Crosse, Wis., with 10c. postage, you will get sample package of Early Bird Radish (ready in 16 days) and their great catalogue. Catalogue alone, 5c. postage. (A.)

## Gladness Comes

With a better understanding of the transient nature of the many physical ills which vanish before proper efforts—gentle efforts—pleasant efforts—rightly directed. There is comfort in the knowledge that so many forms of sickness are not due to any actual disease, but simply to a constipated condition of the system, which the pleasant family laxative, Syrup of Figs, promptly removes. This is why it is the only remedy with millions of families, and is everywhere esteemed so highly by all who value good health. Its beneficial effects are due to the fact that it is the only remedy which promotes internal cleanliness, without debilitating the organs on which it acts. It is therefore of great importance, in order to get its beneficial effects, to note what you purchase, that you have the genuine article, which is manufactured by the California Fig Syrup Co. only, and sold by all reputable druggists.

If in the enjoyment of good health, and the system is regular, then laxatives or other remedies are not needed. If afflicted with any actual disease, one may be commended to the most skillful physicians, but if in need of a laxative, then one should have the best, and with the well-informed everywhere, Syrup of Figs stands highest and is most largely used and gives most general satisfaction.

Mrs. James Taylor, who resides at No. 52 Batley Avenue, Kingsbridge, New York, on the 14th of December, 1894, writes: "My age is 65 years. For the past two years I have had liver trouble and indigestion. I always employed a physician, which I did in this case, but obtained no beneficial results. I never had any faith in patent medicines, but having seen Ripans Tabules recommended very highly in the New York Herald, I concluded to give them a trial. After using them for a short time, I found they were just what my case demanded. I have never employed a physician since, which means \$2 a call and \$1 for medicine. One dollar's worth of Ripans Tabules lasts me a month, and I would not be without them if it were my last dollar. They are the only thing that ever gave me any permanent relief. I take great pleasure in recommending them to any one similarly affected. (Signed) Mrs. J. TAYLOR."

Ripans Tabules are sold by druggists, or by mail at wholesale prices. The Ripans Tabules Company, No. 19 Spruce St., New York. Sample Van, 10 cents.

**"Plain, but athletic."** (After sketch in New York Truth.) Evidently the picture of a woman cleaning house for the first time with Pearline. She finds that what has always been the hardest kind of hard work is now comparatively easy, pleasant, quickly done—and in her joy and enthusiasm and high spirits, she kicks up her heels. Probably this is an extreme case. Still, it may be there are numbers of women who,
