THE GOLD SEEKERS.

The panting steamer slowly drops Away from the crowded pler; The blackened decks recede from view And leave me musing here.

Away where the gold so warm and rede Lies hid in the dark earth's breast; Little they reck of danger and cold, Aglow with the golden quest.

The rosy youth with kindling eye, In his manhood's early dawn, The pale man with the student's stocp, The stalwart man of brawn.

All, each and all, with fevered gaze Fixed on the fields of gold; Ah, well-a-day i for a faith that's firm And a heart that is brave and bold.

And some will empty-handed come, Who have missed the golden goal, And some with gold too dear, alas ! The price of a sinless sonl. And those at home will sit at night— And the wind sweeps where it wills— With hearts away in a shambling shack In the wild Alaskan hills.

For those there be who will come again, All broken and worn and wan. While others left in the Arotic snows Will slumber forever on.

'Tis thus I muse on the lonely quay, Whence the hurrying crowd is gone While far away for the frozen north

A flag of smoke trails on. --Carrie Shaw Rice, in Overland Monthly.

THE COMING OF THE WHITE OWL. BY MARY SPRAGUE.

The soft whir of a spinning wheel came through an open window, min-gling pleasantly with the singing of birds and the hum of bees. Within the room a slim, round figure stepped gracefully to and fro. Without, watch-ing the pretty scene with a smile of dimiration, not unmixed with mischief, and in hand. His horse was close beside him, nib-ling, unrebuked, the clover which grew in abundance near the weather came through an open window, min-gling pleasantly with the singing of birds and the hum of bees. Within the room a slim, round figure stepped gracefully to and fro. Without, watch-ing the pretty scene with a smile of admiration, not unmixed with mischief, on his handsome, ruddy face, stood a tall young continental soldier, cocked hat in hand.

bling, unrebuked, the clover which grew in abundance near the weather-beaten house. Presently the crunching beaten house. Presently the crunching of his strong white teeth on the luscious mouthfuls caught the maiden's . Like a flash she turned and saw silent onlooker. 'Well done, William Foskitt!'' she

ried, tartly. "Tis the act of a brave man, no doubt, to spy upon his neighbors! Is it from the redcoats

neighbors! Is it from the redcoats you have learned such ways? Me-thinks they have apt pupils!" A vivid flush mounted to the young man's forehead. After an instant's hesitation he vaulted over the window sill and approached the fair spinner, whose look of pretended indignation shanged to one of great demureness

"We've scarcely seen the redocats "We've scarcely seen the redocats snough yet to learn anything from them, sweetheart, but the chance is near at hand. General Washington is determined to lie idle behind his trenches no longer. Within a few days-

'Oh, William!"

Her voice was trembling now and As loving as he could wish. Her win-some blue eyes were full of tears. The thread, no longer truly held, broke with a space.

"Nay, no logor unity field, book "Nay," now, sweetheart," he said, arressing the sunny hair which lay against his shoulder, "calm these foolish fears. Likely enough we shall stay these next three months as the last. Lat us not horrow trouble See! last. Let us not borrow trouble. See! last. Let us not borrow trouble. See. which we made today, and the rest is and curls wonderful to behold. I've a full supply of powder, too." out under the trees and read it. I So saying she brought forth from a know already something of its con-tents, I doubt not."

He drew a scrap of paper from his big-flapped pocket and led the way to a beach under an old elm in the dooryard.

"Dear Polly-My brother and some other young men who are at home from camp on two or three days' leave

from camp on two or three days leave are going to give a ball here, at my father's tavern, next Thursday night. 'Twill be quite a grand affair. ''I wish you to come over Wednes-lay and spend the night. Bring your finest gown. I shall wear my pink gauze and the gold beads Aunt Mercy zave me.

gave me. "Milly Brewster and Priscilla Nick-"Milly Brewster and Priscilla Nick-rson will be here. Milly left Boston just before the siege began, and she knows the latest styles of dressing hair. She learned it from on English lady her aunt knows. Nothing like it has ever been seen in this neighbor-bood. "Twill be most becoming to your pretty head. "William Foskitt stopped here on an errand, and I make use of him to bring this to you. I have no fear that his coming will anger you. "Your true friend, "ANNA STEDMAN." The blue eyes and the gray ones

The blue eyes and the gray ones met in a smile of perfect understand-ing as the last words were reached. The next Wednesday afternoon

stay, Daniel?" "No, Anna. My father said he would need me in the field tomorrow." would need me in the field tomorrow." "Be sure you come tomorrow night with your brothers, then. 'Twill be a merrymaking long to be remem-bered. What do you think of this, Polly? Two officers from General Washington's own colony, who 'tately came on to join the continental army, are staying at Isaac Merrick's and have promised my brother to be here. They say that open war will soon begin, and we'd better make the most of this ball. There! the last knot is untied!

Come right in! Supper is all ready. You, too, Daniel. 'Tis moonlight now, and the road will be all the lighter an hour hence.'' So, well laden with Polly's finery, they disappeared within the hospitable taxam

tavern. Two hours later, Daniel being well on his homeward way and the house hold tasks disposed of, the four maidens bade the family good night and repaired to the large double bedded chamber where the were to sleep. Several candles were lighted and placed on the high, narrow mantel-piece, whence they threw fantastic shadows over the spindle-legged fur-niture and the opposite wall. "Now, Milly," began Anna in her

niture and the opposite wall. "Now, Milly," began Anna in her brisk fashion, "you do my hair, and let Polly and Priscilla see how we do ours. "Tis all with rolls and cushions, which we made today, and with puffs and curls wonderful to behold. I've a full supply of medies, too."

cupboard a large paper bandbox piled with numerous articles ready for use, at which the girls looked with sparkling eyes. Anna soon had her beauti-ful dark hair unbound, and when she had seated herself in a low chair, with an apron tied around her plump shoulders, Milly began operations, Very deftly her slender fingers flew like white birds in and out among the long, shining tresses, smoothing, part ing, weaving, rolling, curling, pow-dering, until a tall, elaborate structure, truly marvellous to the sight, arose in stately grace upon Anna's head. She sat quite patiently during the pro-tracted ordeal, encouraged now and then by glimpses of her growing adornment in a bit of broken looking glass held before her eyes by one or

the other of the admiring girls. "I'm sure I can never do that in the world," sighed Polly, envious of Milly's skilful touch. "How did you ever learn, Milly?" Milly's thin, dark face glowed with satisfaction.

Milly's thin, dark face glowed with satisfaction, "Oh, 'tis not so hard when once you have tried it!" she responded, as-suming an air of indifference. "My Aunt Bethia has a dear friend in Mistress Alice Montford, wife to an English merchant. Her maid taught me how to do Aunt Bethia's hair. There! Is that not truly becoming to our Anna's face? Rise, fair maid, and view

fashion often do that. I'H show yes how my Aunt Bethia does." Polly made no answer. Her neck was already aching from her continued efforts to ba'ance her "tower" prop-erly. For a few minutes she wished she had not come, but very soon her naturally sweet temper reasserted it-self, and she made the best of an un-comfortable prospect.

sei, and she made the dest of an un-comfortable prospect. "We might have waited until to morrow afternoon," said Anna, "but there'll be so many things to do. We can manage to sleep somehow," By the time Priscilla's auburn hair was dressed she had tardy qualms or conscience.

"What think you, girls?" she in-quired, with an anxions wrinkle in her white forchead. "Is it altogether her white forenead. "Is it altogethen seemly for us to ape the fashions of our country's enemies? How will our continental soldiers like to see us thus?"

thus?" "Have done with such foolish no-tious, Priscilla Nickerson!" commanded Milly with more than her usual de cision. "You will learn, some of these days, that men know nothing of fash-ion. If we only look to their pleasing that is all they care. And I'll warrant there'll be no finer appearing girls at the ball than we four. There's small con-nection. to my thinking, between the nection, to my thinking, between the way we do our hair and this unchris-

way we do our hair and this unchris-tian war. So put away your silly fears, Prissy, and be sensible." Milly was older than the others. She lived in Boston. Her sharp, posi-tive way and words had a great deal of weight with her companions. So Prissy dropped the matter and was soon engrossed in trying on her new blue satin slippers. Not so Polly.

Not so Polly. "What will William Foskitt think?" she kept asking herself over and over again, until her heart grew so heavy that but for the shame of self-betrayal she would have torn the mass of rolls and ribbons from her head and braided her soft hair in its accustomed bands.

At last each head was dressed. Then the girls sought comfortable chairs against whose high backs they could lean propped up with cushions and pillows. The candles were extin-guished. Wrapped in blaukets they established themselves and for a time talked of the morrow's gaieties. But finally wearied nature claimed her due. The moon peeping in through the open window at the mild August midnight saw four sleeping beauties.

High in an elm tree opposite this same window sat a great white owl. For a long while he had been keenly observant of all that was going on within the chamber. What he thought of the proceedings can never be known, but true it is that he slowly descended from his perch and with noiseless movements stepped inside the window. Gravely scanning each bedecked top knot he selected Poly's as the most to his liking. With a dut as the most to his liking. With a flut-tering whir of his big wings he made swift and sudden descent upon it, diving his strong claws sharply within it and, after careful balancing, settling

down into a steady position. And poor little Polly! Alas! her light slumber, already disturbed by uneasy thoughts of possible disloyally uneasy thoughts of possible disloyalty to her lover, had a rude awakening. A coufused sense came over her of being carried off by the top of her head; a stab, a pain; a startled con-sciousness of the near presence of some awful thing, some heavy weight. Then she gave piercing shrieks which brought the terrified girls to their feet, the household to the room

Candles being hastily lighted re-vealed to the incredulous eyes of all the huge white owl sitting on Polly's head, blinking wisely and evidently in no mind to leave his dainty resting place.

Muscular hands carefully dislodged Muscular hands carefully dislodged him. Polly's golden hair was soon combed smoothly out and laid in a long, gistering braid over the pillow on the bed to which they carried her. For hours she suffered severely from the nervous shock, and it was several days before she was able to go to be days before she was able to go to her home.

She did not feel entirely herself again until she had told the whole story to William Foskitt and had heard

him say that he forgave her. "I will say the words to please you, sweetheart, but I do not consider that you did grievous wrong," the stalwart young continental replied to his in-sistent petitioner. "Twas only a triffing matter. You charge yourself too heavily, my Polly." "No, William," she made answer, "No, within," she made answer, smiling up at him with happy eyes. "Tis the part of a woman to be true even in very little things."--Waverley Magazine.

FOR FARM AND GARDEN.

Keeping up Fertility. To keep up the fertility of a farm while cultivating is something that comes about as near to agricultural science as anything of which there is knowledge, and the farmers that un-derstand this the best and practice it the closest are the most successful and the closest are the most successful and prosperous, for the proper manuring and enriching of the soil is the foundation of successful farming—no mat-ter what branch of farming it may be --and it is a matter that demands the farmer's most careful and earnest attention.

Important Points in Potato Culture

Important Points in Potato Culture. Potato rot and blight have been ef-fectively treated at the Michigan sta-tion, by the use of a spray of bordeaux mixture. The crop was successfully carried through a severe drouth by continuous cultivation of the surface soil. The corrosive sublimate treat-ment of the seed controlled the potato cash. It was found that potatoes dement of the seed controlled the potato scab. It was found that potatoes de-teriorate rapidly from year to year unless well selected and carefully grown. Selected seed increased the grown. Selected seed increased increased in size and appearance of the tubers of several varieties. The potatoes which more stored in a potato basement lost from Sep-11 1-2 per cent. in weight from Sep-tember to May. Potatoes which had sprouted yielded less than sound seed.

Starting a Sitter.

To get the best results, have a sep-arate house tor the sitters. Let them get fully determined to incubate, then prepare a fresh, clean nest and remove them carefully after night. Put nest eggs (or the small gourd which every poultryman should raise) under them until they are reconciled to the change

A lath coop, one foot wide, two feet long and fifteen inches high, is set before the nest and the hen eats, drinks and dusts in this coop until accustomed to go back to her nest. A house for the sitters with the south side made to open, the opening screeened with two-inch mesh chicken wire, is a fine place on sunny days to open up and let the sitters come out to sun and dust themselves. At other times it has been found that three weeks' confinement in the small coops often caused diarrhea and weakness which this freedom of the henhouse every few days obviated. Do not for get to see them back to their proper nests with the coops in front and the house shut up, for a hen needs seclusion when sitting.

Fowls for Confinement.

Probably more mistakes are made in selecting the breeds of positry to be kept than in any other part of the work. The large, heavy breeds like work. The large, heavy press that Brahmas, Cochins and Plymouth Rocks, have been bred for generations to confinement and rarely make an effort to escape from small yards, while effort to escape from small yards, while the lighter, more nervous breeds like Leghorns and Minorcas, resent being deprived of their liberty. In the se-lection of a breed care must be taken in this direction of a prediction of the taken in this direction as well as in the proper selection to meet the demands of the market. It does not follow, however, that Leghorns cannot be kept in small yards, but simply that if such is the case they must be kept busy at all times. Never permit them when confined in small yards to have more than one meal a day that they do not earn by hard scratching. Like humans, the busy hen is the contented one, and if not kept busy they are apt to get into mischief. In the case of the hen this mischief consists in feather pulling and egg eating, both in this direction as well as in the feather pulling and egg eating, both almost impossible to break off. If one is not so situated that fowls kept in small yards can be kept busy at all times, then the heavier breeds should by all means be selected. —Atlanta Journal.

Corn Cobs for Stock Lots

Every stock raiser knows how muddy it becomes around feed troughs at certain times in the year, especially if the ground is a rich, black soil. It may be impossible to put stone around the troughs, or if not, the expense of doing so may be too great. One of the cheapest and best methods of protecting against mud is to throw corn cobs around the troughs. The cobs which are left in the troughs, if the sorn is fed in the ear, will not be suf-ficient. The cobs should be spread on the ground to a depth of six inches. They should not be thrown on the mud, but should not be thrown on the mud, but on dry or frozen ground. The cobs will rot, but they will become pretty well packed into the ground. Before the rotting cobs can become a slush, a fresh supply should be spread on. If this is well done, there used be no complaint because of the mud around the troughs. It will not be necessary to move the troughs to avoid the mud, which must be done if there is nothing to prevent it. The farmer will do which must be done if there is nothing to prevent it. The farmer will do well if he fills up with corn cobs all of the mud holes which he may find on his farm. The cobs make good paths across muddy lots, and are useful wherever the mud becomes deep and disagreeable. Of course, most of them rot finally, but they serve an ex-cellent purpose while they last.—New England Homestead.

The crowded market of Saturday often leaves on hand of the grower a few crates of berries which are worthless when the market opens the following week. The insects somehow find their way to the fruit and just at the time when it should ripen we find that it is ruined. Nine cases out of ten of fail-ure in the fruit business comes through loss due to waste. The successful fruit grower must learn early in his career that his prod-ucts are at all times tender and quick-

term early in his career that his prod-ucts are at all times tender and quick-ly perishable. He must, so far as he is able, prevent the contact of any agent that destroys or reduces the value of his fruit. This is not some-thing that is beyond his power. By a vigilant warfare against insects he can vigilant warfare against insects he can greatly increase the quantity and im-prove the quality of the crop which he

is to receive. Cold storage affords one of the most practical means of preventing waste in the fruit crop that we have. Apples that fall from the tree when almost ripe, and are lost, are frequently ripe enough to be picked and placed in cold storage. The fact that apples for cold storage should be picked while solid is valuable information to those who realize that their fruit is dropping badly while in that state. An ice and cold storage house on the fruit farm is of immense value in preventing the of immense value in preventing the waste in summer fruit that comes naturally through rapid decay. Berries, cherries, plums and peaches can be kept a number of days, even weeks, and there is thus afforded ample opop portunity for using or disposing of them. Let the farmer and fruit grower be as painstaking to prevent aste in their products as the packers and the manufacturers are to prevent waste in their large commercial estab-lishments.-W. L. Hall in Farm, Field and Fireside.

Choosing the Kight Breed.

Many dairymen who grasp the cor-rect idea that improved methods of breeding benefit their milch herds feel disappointed at results. This is because they do not acquire the breed best adapted to their needs and location.

As a truthfal illustration of what mean, I wish to cite an instance of which I was personally cognizant some little time ago. A New York dairy-man bred into Holsteins under the man breaches under the supposition that because of their copious milk-yielding qualities, they were the best cows for him. Two-thirds of this man's farm was low-lying land, and the pasturage neces-sarily of a watery nature; that is, the luxuriant grass growing from a pro-verbially moist soil contained far more water than does highland herbage.

Now, Holstein cows are known to lean toward the production of watery milk, and in this instance, stimulated by the character of their feed, they held good their reputation to the extent of yielding milk that did not con-

that the legal per cent. of solids. The man was disappointed with the breed without recognizing the fact that his inferior pasturage had more to do with the failure than anything else. Besides this. I know of a num else. Desides this, I know of a num-ber of other prominent dairymen liv-ing on river-bottom land, who, with Holstein cows, find it difficult to pro-duce milk possessing a legal standard. In some cases they have supplemented In some cases they have supplemented grain rations to help them out, and in others gradually introduced other breeds of cows. Do not infer from this that I am

saying anything against Holsteins, for in their proper place I am a great ad-mirer of the breed, but a breed must be adapted to its surroundings and the requirements of the dairyman. If a dairyman is not quite sure what kind of milch stock will meet his best needs, or mich stock will meet has best needs, he had better go experimentally before acquiring a whole herd of new bloods. Also always take into account the quality of your soil and pasturage, and the adaptability of the prospective breed of cows for the conditions you have under control

have under control. To new breeders, grades, I think, will prove more generally satisfactory than full bloods. By judiciously se-lecting the dams-cows or heifers of naturally good milch strain---and using a thoroughbred bull, firstclass grades can be secured at a nominal price.

This looks easy enough, but yet it requires skill and careful study on the part of the breeder to breed success-It can be said a successful dairyman will make a a successful dairyman will make a good breeder. One must be an accu-rate judge of the points of a good milch cow, and of the sire that is to be father of her calf. This is the main essential, and the side issues are sure to be taken care of by one who has the right principles at heart. —George E. Newell in American Cul-tivator.

A TEMPERANCE COLUMN.

THE DRINK EVIL MADE MANIFEST IN MANY WAYS

The Drunkard-Liquor Shops Are Not the Poor Man's Club-Are a Sorry Make-shift When Recreation is the Object-Drunkenness is a Disease.

On feeble and unsteady legs He walks as if he trod on eggs.

Whene'r he has to give or take His hands, as with the palsy, shake.

To meet your gaze he vainly tries With duli and bleared and bloodshot eyes. Compelled to bear the sign, he shows A swollen, coarse and crimson nose.

His pimpled, blue and bloated face Of manliness has not a trace.

All people near him shun like death His permeating, sickening breath.

With ruined health and shattered nerves He suffers tortures he deserves.

Sad children and heart-broken wife Through him endure a wretched life.

Abhorred and shunned by friends once known He wanders through the world alone.

Soon losing self respect, he goes In seedy, torn and dirty clothes.

With raging, hot, increasing thirst Which can't be quenched he's ever cursed. In vain he takes the pledge to stop; With all power gone he has no prop.

Down, down he sinks, until in time He in the gutter reeks with slime.

From borrowing he begs until For drink he'd steal or even kill.

Delirium tremens' horrid sights He sees. With imps and snakes he fights,

At last with tramps his doom is sealed, An then he goes to Potter's Field.

And after that? Alas, who knows Where any slave of liquor goes?

Saloons Not a Social Necessity.

Saloons Not a Social Necessity. The argument that liquor saloons are a "social necessity" to the poor man, or, in-deed, to any one, is too specious to hold water. At any rate, in this country there is but little of the "poor man's club" per-taining to them. At its best the liquor sa-loon is but a sorry makeshift when recrea-tion is the object, and the instruction a workingman is likely to gain nit the source-ly calculated to elevate or improve his mind. So long as he has money and will speed it with alacrity his company is wel-come, but when his pockets are empty his society is no longer regarded with favor by the proprietor. The saloon keeper is not a man of sentiment, but invariably keeps his eye on the main chance. This being so, the question must be faced as it really is and not judged from an optimistic and imagina-tive point of view. The truth is that the hiquor saloon in America is not a "poor man's club," a place in which he can give bis "recreative instincts" fair play, but simply drakes at large profit to the pro-prietor.

strong drinks at a large profit to the pro-prietor. If the liquor saloon does satisfy the work-ingman's "recreative instinct," all we can say is that if he does not possess the bibu-lous instinct we are sorry for the intelli-gence of the workingman. The great ma-jority of medical men nowadays are quite agreed that alcohol does no good to a healthy man, and, taking into consideration the incalculable amount of barm that has been wrough by its agoncy, it is best that the matter should be judged on its merits, and that the ignorant and careless should be warned of their danger. It is right and just that the workingman should be af-iorded the opportunities of mixing in con-genial society which the rich man enjoys, but he must not look for in the liquor sa-loon.

but he must not look for in the liquor sa-loon. From a consideration of the social side of the saloon question to that of the subuse of drink is but a step. Where, then, is the remedy to be sought in order to abolish or counteract an evil which is acknowledged on all sides to be widespread and extreme-ly pernicious? The view that habitual drunkenness is a disease and should be treated as such is the one most generally held in these days. Dr. Norman Ker, the best known British authority on the mat-ter, says: "Deal with the inchriate as you have successfully deait with the maniac. Frown not on him as hardened criminal. Remember he has failen by the power of a physical agency which has orushed to earth some of the noblest and most gifted. Treat im as a patient laboring under a baffling and inveterate disease and amid many dis-couragements. Such a measure of success will follow your true curative treatment as will gladden your hearts as men, while it will attest your skill as physicalas."

An Intellectual Polace

Polly set forth on horseback for Stedman's tavern, accompanied by her younger brother, a lad of 15. Tied to their saddles were several large bundles containing her ball costume.

They met few travelers on the three miles of their ride until within a short distance of their destination, when half a dozen horsemen were seen approaching at a rapid pace. "Be not afraid, Polly," said Daniel,

with an air of protection. "We will rein our horses to one side till they

pass." "But who can they be, Dan?" whis-

pered Polly. "Very likely one of the expresses General Washington sends all through

General Washing the colonies to carry and bring I have heard my father say they ride swiftly and in small companies." There was time for no further ex-shange of words. The galloping riders were close by. The lad took off his cap, and Polly, blushing, involuntarily bowed in response as every man of the company raised his cocked hat, and one of them, the youngestand handsomet, spoke a word of respectful greeting. Daniel turned in his saddle to look His hazel eyes were His hazel eyes were

"T'll be a soldier the minute father thinks I'm big enough!" "'Tis a brave life indeed," answered

his sister. The silence seemed deeper than ever

The silence seemed deeper than ever after the sound of quick hoof-beats died away, but soon they began to as-sleep well enough sitting up and lean-oend the long hill leading to Sted-

thy charms!'

Laughing, they led her to the long. narrow mirror hanging against the wall, in which, by dint of turning this way and that, she was able to see her mass of white puffs and curls.

Now, Polly, it is your turn next." said Milly. "Why, I thought-" began Polly.

"Oh, I'd just as lieve do them all as not, interrupted Milly, good natured-ly. "I love to see what new ways I can discover."

Polly took her place in the chintzcovered chair without further ado. Her golden locks received a different treatment from Anna's dark ones, but in due time she, too, emerged from Milly's hands with a triumph of archi-

of. Come, Prissy!" Blank astonishment looked from Polly's blue eyes. "Not go to bed! Who ever heard of such a thing?" she cried in wonder. "How will we look tomorrow night if we don't gat any alean?"

QUAINT AND CURIOUS

There is at Werda in Dahomey a temple in which 1000 snakes are fed by the priests.

Squatters who have recently pene-trated the interior of New Zealand report the discovery of a tribe of aboriginal dwarfs

Florida housewives use oranges in stead of soap in scrubbing floors. They cut the fruit in two and rub the pulp on the floor. It is found to be very cleansing.

Far away from civilization gesture language is still extant in Australia. Some of the tribes possess such an excelient code that it is almost as effi-cient as the spoken language.

A queer exhibition was recently held A queer exhibition was recently neuro-in Berlin, Germany—that of the Vege-tarian society—in which sixty chil-dren were shown who have never touched other nutriment than vegetables.

A man who was convicted of sever highway robberies in Cotania, Sicily, was lucky enough to be tried before a tender-hearted judge, who thought a life sentence too severe. He therefore was easy with him, letting him off with only 180 years' imprisonment.

Stop the Waste of Fruit.

Stop the Waste of Fruit. In the fruit industry the waste often consumes the profits. An inoppotune rain or wind at the time when the fruit is just ripening often ruins the hopes and anticipations of a whole year. The failure to use the right kind of a package and to make the fruit look its best in it often degrades the quality in the estimation of the buyer from first to second class with the corresponding reduction of price.

Peultry Notes

Feed liberally, but feed right; and you will have no overfat hens.

Have a curtain of oiled muslin to shut off the run in stormy weather.

A healthy hen will lay and consume great deal of food without getting

Many fail with poultry because they try not to get their hens too fat-they starve them. Open the doors and windows of the

poultry house on all clear days and you will not be troubled with damp walls.

It has been demonstrated that stand-ard bred fowls can be made to lay from 150 to 200 eggs per year under proper treatment and care.

The gizzard is made to grind the food in. It cannot grind food that is already ground, thus, in order to keep it in normal condition it must perform the work nature intended it to.

Some of the expert pickers of poul-try can take the feathers off a fowl so quickly as to astonish one who does not understand the operation. It is done by dipping each carcass in cold water and allowing it to drip.

An Intellectual Poison. An Intellectual Poison. Nor found it be otherwise, for the brain, which is the seat of memory, of thought, and of all the intellectual faculties, is affected by alcohol, and by reason of the extreme sensitiveness of its tissue is even partic-ularly sensitive thereto. Hence it soon becomes subject to change under the in-fuence of liguor, and quickly deteriorates. The power of thinking is affected, the in-tellectual faculties are obscured, judgment disappears and the final result is that many alcoholic subjects develop madness. For that matter, drunkenness itself-that temporary poisoning-is really an rephemeral madness which, by force of reptition, becomes converted into com-piete madness. It is a statistical fact, which shows at a glance how alcohol af-ferent countries. Bad For Our Soldiers.

Bad For Our Soldiers.

Bad For Our Soldiers. The whisky and beer manufacturers and dealers who are trying to make the people believe that nothing will preserve our sol-diers' health and increase their strength so much as the product of their breweries and distilleries, are well answered by the ex-perience of the great explorer, Paul du Chalilu, who, in a lister written to a young soldier, said: "I will tell you my experience while traveling in warm countries. I abstained from strong drinks because I found they did not belp me—on the contrary, I felt weaker half an hour after, so I gave them up."

Notes About The Drink Evil. While the saloon exists your own son is never safe.

A champagne trust with capital of \$50,-000,000 is reported.
