

FOR FARM AND GARDEN.

Feeding for Wool or Mutton.

There is such a thing as feeding lambs and ewes either for wool or mutton. If for wool only, a pasture diet is generally sufficient; but when for mutton or an increase in the wool, grain is essential. For good mutton both ewes and lambs need grain food. There is a good mixture in corn meal and flax seed oil meal.

Clean the Plow.

The department of agriculture thinks that having a plow clean and bright is of sufficient importance to warrant it in publishing directions for cleaning it, which will also work well for other tools of iron or steel. Slowly add one-half pint of sulphuric acid to one quart of water, handling it carefully and stirring slowly, as considerable heat will result from the mixing. When cool moisten the surface of the metal with this, and then rub dry, after which wash off with pure water. This application should clean any surface not too badly rusted, but if the tool has been long neglected it may require more than one application. After they are thoroughly cleaned we would advise a thorough coating of grease before putting away, and when they are taken out to use give them another greasing and they will go "one horse's draft easier," as the old farmer used to say his scythe did after it had been properly whetted. Not only is it much easier for the team, but for the plowman, if the plow is clean and bright, as the adhering soil makes it handle hard when the plow is rusty.

Treatment of Milk for Bottling.

If milk is from a healthy cow that has wholesome food, pure air and water, and the milk carefully drawn in a pure atmosphere, we may reasonably expect the intercellular spaces in the milk to contain nothing objectionable to the organs of smell or taste. Considerable animal heat is of course present at first, but this passes off quickly during the cooling of the milk. Indeed, if obtained in the manner just described, milk may be bottled and submerged in ice water before it becomes fairly cold, with the very best of results.

This also is the proper method of chilling pasteurized milk, which we prefer to bottle at a temperature of not less than 110 degrees Fahrenheit. It is surprising how rapidly a bottle of hot milk will cool down in a tank of ice water or even water at 50 degrees Fahrenheit. Water cools bottled milk faster than air, even though the latter be 20 degrees colder than the water. Chilled in this manner, i. e., in stoppered bottles, milk loses its heat without any replacement of air between the molecules and is therefore certain not to have been contaminated during the process.—New England Homestead.

Help the Hens.

Something from nothing you can't take. Most of us are beginning to realize the truth of this trite saying in regard to most things about us. It is a poor farmer who does not realize that he can not take the grain from the fields year after year, returning nothing to them without some time, sooner or later, getting to the end of his string and finding his land run down and bankrupt. But some poultrymen have not discovered that the same principle holds good in regard to hens. You can't get something from nothing there either. If your hens are to lay eggs, they must have something to work with; they must get egg-forming elements from some source or other. In recent years the practical poultryman has been able to double his egg supply in the winter by careful study of egg-producing foods. Prominent among these must be placed green cut-bone, a food that is easily and cheaply obtained and that is undoubtedly the greatest egg-producer ever fed to hens. The bone, when finely cut while it is still green, supplies that element of animal food so needed and relished by fowls, taking the place of the bugs and worms which hens devour so greedily upon the range. Moreover, the bone supplies the mineral matter needed for egg formation, the lime, the phosphate, the magnesia, and is, in short, an ideal egg food. When we consider how cheaply the bones can be procured, and how little trouble it is to prepare them for the fowls, it is difficult to understand why any poultryman neglects their use.—Tennessee Farmer.

Advantages of Special Crops.

In the vicinity of cities and large manufacturing towns the intelligent farmer will find it to his interest to confine himself to one or two crops, as money crops, but in his selection he should exercise his best judgment to select only crops adapted to his particular soil and locality. He should also select those which he understands how to grow and takes interest enough in the subject to investigate, and should experiment sufficiently to keep in advance of the ordinary cultivator.

There are many advantages in having one principal crop. The farmer's attention is not distracted as with mixed farming, and his mind being concentrated on one point, he is more likely to know the proper time to perform the different operations for the crop, and to realize the importance of never being behindhand in doing any of them. It is true that to succeed well in special crops requires as high intelligence as in mixed crops, if not higher; for when the producer goes to market with his crops, his principal competitors are those who are devoting their time to making every possible improvement for the production of

the same crop he is producing. So if he is to compete with them successfully he must be able not only to select a soil exactly suited to the crop, but to know the best methods of preparing the soil and cultivating the crop. If he is not able to do this he will lag behind, and his profits will be greatly reduced. He must also learn how to put his produce up in the most attractive form, so that when put on the market it will at once attract the attention of the buyers.—American Agriculturist.

Fertilizing Corn for Grain.

Farmers well understand as a rule that live stock are fed with reference to what is expected of them. Feeding, for example, for milk is a very different thing than a mere maintenance ration or from a fattening ration. In the same sense, crops may be fed for grain or for forage—that is, stalk and leaf.

Few farmers but have had experience with a rank growth of stalk, but a light yield of grain, in growing corn, and in some cases this may be desirable. Corn grown for the silo is a very different matter from corn grown for grain, and no observant farmer will use the same methods of culture for both.

It sometimes happens, very frequently, in fact, on soils long under the plow, that though the corn is grown for grain, the yield is very disappointing. Lack of rain does not always account for this, as neighboring fields prove satisfactory though subject to the same climatic conditions.

Throughout New England corn is commonly grown on clover sod. It is noticeable that the poorer the sod, the poorer the yield of grain, though the stalks may make a brave showing so far as height is concerned, though they are generally badly down at harvest. This is due directly to a lack of mineral fertilizer, potash and phosphates.

Clover roots and stubble carry considerable potash and phosphates, but clover, like other plants, may be starved in mineral plant food, though still making a great show of growth. The writer has seen clover fields which promised at least two tons per acre, but which barely gave one when put to the test. Corn on such clover sod is sure to give a light crop of grain, and also grain which will not weigh up in the bushel measure.

In some way potash and phosphates have a marked effect on the production of seeds of plants. The two fertilizer ingredients seem to act in conjunction, the one aiding the assimilation of the other. On soils somewhat light, kainit alone has been known to give large yields of well-filled-out grain.

The mineral fertilizers may be applied with excellent results as late as the middle of June, broadcasting in the rows just before working. On soils in good tilth, the application may be doubled very profitably. With such treatment, there may be no fear, or even risk, of a light yield of grain accompanying a heavy yield of stalks; or, in fact, a failure of the crimson clover sown in August, provided the clover seed be of good quality.—S. P. Cox in American Cultivator.

Poultry Notes.

Mend that leaky roof. Change feed frequently. Many an egg is lost by over-feeding.

Soft feed of any kind is fattening, especially corn meal.

It is hard work to overfeed young stock with proper food.

Don't crowd fifty hens in a house where only twenty should be.

For mature stock there is no better mash than bran and ground oats.

Large and small turkeys should not be shipped in same coops. Have each coop uniform in size.

Turkeys should be picked dry when intended for shipment. Pack them carefully in boxes layer upon layer.

Don't fool away much time doctoring hens. Unless it is a specially valuable one, it will be cheaper and safer to chop its head off and bury it.

Don't keep too many breeds. Make a specialty of a few and then strive to grade up the highest standard. Unless you are a fancier one breed is enough. Now separate the fowls you expect to sell, and begin to pour the corn into them. If you intend to fatten them it should be done quickly and corn will do it.

A Bishop's Discovery About Hens.

The archbishop of Canterbury, in his youth had some experience as a farmer. Evidently the bishop of London's education in that respect was neglected. In the account of one of his speeches at the church congress he is reported as saying: "There is a certain class of people who are like hens when they have laid an egg. They form their opinion with such difficulty, apparently, and so seldom, that when they have formed one they go and crow to all the world to show that they have done it." We would respectfully advise Dr. Creighton not to draw an illustration from crowing hens if he should ever be addressing a rural audience.—Westminster Gazette.

Carpet for Congressmen to Tread On.

The new carpet for the House of Representatives in Washington will be red this session. It is that shade every other year. Green is the color in the intervening years. These shades are chosen because they are not so liable to fade, and because they tend to brighten the chamber. The carpets are made under contract, and one of the stipulations is that the manufacturer shall not duplicate the pattern. The old carpets are renovated and placed on the floors of the committee rooms.—New York World.

NEW YORK FASHIONS.

Designs For Costumes That Have Become Popular in the Metropolis.

New York City (Special).—Women will hail with delight the fact that the jersey, a garment of undoubted popularity several years ago, is about to return to them. Perhaps it would be as well to say that it is the same old

THE MODIFIED JERSEY.

jersey made more beautiful a thousand times. The winter and early spring models shown in a few of the most exclusive shops are exquisite beyond description. They are made not only in black, but in solid colors of blue, green, red, fawn, etc. Some of the black models are braided and spangled most elaborately in Bolero and Persian lamb effects. Some of them are corded and some are plain. In fact, there is every possible style. It has been hinted that the jersey is a garment for plump women only, but the present fashions are becoming to slender figures as well.

Three Millinery Triumphs.

Gray in all shades of ash, pearl and stone is as popular as ever. The charming hat shown on the left of the

SOFT TONES OF GRAY. A MILLINERY TRIUMPH. SMART VELVET TOQUE.

large illustration is of velvet in a silvery lichen tone, with a rather narrow round brim and heavily shirred and folded crown. Snow-white gulls are set close on either side of a tall velvet bow in front and the combination of delicate white plumage and silver-gray is very beautiful.

The frame of the hat in the center of the group in the large picture is of sapphire-blue velvet. It rolls high and sharp on the left side, down which soft silk is drawn in full, rich folds. But the glory and pride of the whole is a gorgeous South African bird of gleaming plumage. The feathers are of glowing metallic blue, and the head of white and rose, with the big black eye in high relief.

The model on the right of the group is the very smartest toque of the season. The fur is of otter, soft as down and sheeny as satin, combined with velvet of silvery lilac. The design is the very perfection of simplicity, but is none the less rich and beautiful as a whole.

How to Utilize Lace Handkerchiefs.

Who of us has not got one or two cherished and delicate handkerchiefs of priceless old lace that we keep among our most valued possessions? and how often we pine for the opportunity of showing them to our admiring friends? A new use has come in for them which is attractive in the last degree. This is to remove the cambric centre and to use the lace as a yoke on a costly frock. Then, again, we can wear them as a frill at our neck, as a knot, or fold them so as to use as a collar to a silk or muslin blouse.

Fashionable Purse Bags.

With the present pocketless dresses, it is necessary for the up-to-date woman to carry some receptacle for the handkerchief, purse, etc. Very pretty small bags, some of the reticulate shape, others of oblong form, are considered with us the proper thing. They are made in colored leather matching the costume in color, with chased gilt (or gold) clasp and chain, and contain small interior pockets for smelling bottles, watch and other sundries.

The New Petticoats.

Petticoats are tighter than ever.

shaped like skirts. The top is set in simple bias or crosscut band, through which a ribbon is passed. There are no plaits, no gathers behind; they are placed beneath the corset fastenings almost at the bottom of the hips, so as not to enlarge the figure by a line. The flounces are shaped and covered with lace like those of last year.

Long Capes in Favor.

Long capes have come to be very much regarded with favor. Care must be taken to have the cape cut broad enough. The stylish cape of to-day does not reduce the width of the woman's shoulders. It is the misfortune of too many of the golf capes now worn that they are cut so narrow in the shoulders.

Plaited Skirts.

One of the latest fashions shows skirts with rather shallow folds resembling killing all round; the folds or plaits are there certainly and give somewhat greater flow to the foot of the skirt.

Tailor Dresses With Pippings.

Pippings of silk and velvet continue to be much used. Many garments and suits of the strictly tailor-made class have seams finished with velvet pippings, and the effect is very good.

Boas and Muffs to Match.

The most beautiful boas are the long round ones, huge in size and made of the fluffy fur of the cub bear. The muffs to match are proportionately large, and are round and plain.

The Sleeve the Feature.

A feature of the new gown is, of course, the sleeve, that has been going through the same process of evolution, or rather revolution, on which the skirts are just entering. There is no question that fashion has gone back again to the tight sleeve, and now there is just as much attention paid to having the sleeve fit closely over the upper part of the arm as there is to having a skirt fit absolutely smoothly over the hips. There are many people to whom a close-fitting sleeve is not becoming, and as yet

How's This?

We offer One Hundred Dollars Reward for any case of Catarrh that cannot be cured by Hall's Catarrh Cure.

F. J. CHENEY & Co., Toledo, O. We, the undersigned, have known F. J. Cheney for the last 15 years, and believe him perfectly honorable in all business transactions and financially able to carry out any obligation made by his firm.

If we consult the Encyclopedia for information about soap, we find in it this statement:

"The manufacturer of toilet soap generally takes care to present his wares in convenient form and of agreeable appearance and smell; the more weighty duty of having them free from uncombined alkali is in many cases entirely overlooked."

The authority is good, the statement is undoubtedly true, and careful people realize more and more that it is best to buy only an old-established brand like the "Ivory." A brand that they know is pure and harmless.

The Straw and the Camel.

Once upon a time an Arab approached his camel in much anxiety of spirit.

"This, O Camel!" he said, "is the last straw! As you know, it is supposed to break your back, but I'm going to take the responsibility of feeding it to you!"

Accordingly the camel partook of the straw, and presently died of indigestion, complicated with appendicitis.

This fable teaches how hard it is to thwart destiny.—Pack.

What Do the Children Drink?

Don't give them tea or coffee. Have you tried the new food drink called GRAIN-O? It is delicious and nourishing, and takes the place of coffee. The more GRAIN-O you give the children the more health you distribute through their systems. GRAIN-O is made of pure grains, and when properly prepared tastes like the choice grades of coffee, but costs about 1/4 as much. All grocers sell it, 15c. and 25c.

In the United Kingdom there are 300,000 persons named Smith.

CARTER'S INK

Grow up with it.

The Hon. Geo. Starr Writes

No. 3 VAN NESS PLACE, NEW YORK. DR. RADWAY—With me your Relief has worked wonders. For the last three years I have had frequent and severe attacks of sciatica, sometimes extending from the lumbar regions to my ankle, and at times to both lower limbs.

During the time I have been afflicted I have tried almost all the remedies recommended by wise men and fools, hoping to find relief, but all proved to be failures.

I have tried various kinds of baths, manipulations, outward application of ointments (too numerous to mention, and prescriptions of the most eminent physicians, all of which failed to give me relief.

Last September, at the urgent request of a friend (who had been afflicted, as myself) I was induced to try your remedy. I was then suffering fearfully with one of my old turns. To my surprise and delight the first application gave me ease, after bathing and rubbing the parts affected, leaving the limbs in a warm glow created by the Relief. In a short time the pain passed entirely away. Although I have slight periodic attacks approaching a change of weather, I know now how to cure myself. I feel quite master of the situation.

RADWAY'S READY RELIEF is my friend. I never travel without a bottle in my valise.

Yours truly, GEO. STARR.

Emigrant Commissioner.
