## TON COUNTY NEWS. HE RODE FOR HIS LIFE

A Bicyclist Globe Trotter Is Pursued By a Tiger

HE WAS BADLY SCARED

Result of an Hour's Spin Near the Jungles of India-He Had a Good Wheel and Says a Steep Hill Saved

A bicycle race against a tiger with his own life as the stakes, was the inique experience of M. Henri Gilbert, who has just arrived in Paris, France, after a seven years' walking tour of the

He was encamped near the village of Aring, in India, where he met a tourist with whom he was soon on friendly terms, and whose bicycle he borrowed for an hour's spin, the first in two years. M. Gilbert says:

"I left the camp about 1 o'clock in high giee," he says, "the machine running beautifully. After going some lit-tle distance I suddenly found myself in a delightful open glade, which was one mass of verduge and flowers. Here I dismounted from the machine, and, placing it against a bush, selected a nice spot on which to rest. Then, taking off my hat, I sat down, and stretching myself out at full length, I pre-pared for a nice little nap. Suddenly I heard a curious sound in the bed of the watercourse, as though some animal

were moving.
"When the dry, crackling sound reached my ears I lifted my head and looked toward the spot. Evidently some large animal was making its way out of the jungle, and presently it came into sight at the water's brink. I can assure you that my heart almost consed to beat, and a dull, heavy, paralyzing pain appeared to seize the whole of my body when my gaze rest-ed upon the fierce and wicked head and ong, lithe, striped body of an immense iger—I should judge that he was about

yards from me. "Leaping to my feet I fairly huried myself in the direction of the bicycle. I threw myself upon it, and with the mpetus so gained began to glide swift-y along-even before my feet touched the pedals—literally racing the tiger for dear life. The very instant I got fairly under way I heard the huge beast make his first leap in my direction. Notwithstanding the dreadful emotion which I suffered in that awful moment, my control over the machine was comtime it seemed to me as though I were traveling as fast as the very wind.

"Suddenly the frightful thought ocmechanism give way? I did not, how-ever, relax my efforts, thinking that

"Within striking distance of my back

if I succeeded in putting 50 yards bedreadful pursuer he would have little chance of overtaking me. In order to show the imminent peril I was in, I may say that the leap of the tiger brought him to within about six yards of my back wheel, and, although I was going as fast as a first-class bicycle can travel, sixth leap almost brought the claws of the monster within striking distance of my back tire. But still I pedalled away desperately, my heart nearly bursting and my legs working like

"As I began to realize that I was gaining a little my exertions were re-doubled. I knowing well that any slackening of pace or an extra leap or two on the part of my terrible foe would put an end to the race and my life almost simultaneously. Having gained a little, I glanced around, and saw the tiger was still coming on, and at a great pace.

"Just at this moment I saw in front of me another straight road opening before me. You may judge of my terror, however, when I tell you that as n as I had turned into this new road I beheld, lying right across my path, a huge tree that had fallen through decay. I charged the obstacle headlong, and, just before crashing into It, I leaped from the machine and scrambled over recklessly, feeling cer, tain that the tiger was gaining. It goes without saying that I literally threw myself into the saddle again with frantic energy, and pedaled away from the inexorable monster. I heard the tiger leap over fallen tree, and, sick at heart, I realized that if the chase lasted much longer I should have to give

"Greatly to my relief, however, a short distance in front on my left I saw yet another road, and a ray of hope came to me as I noticed a steep descent. Driving the blcycle with all possible speed, I entered upon the descent lik an arrow, and a minute or so later put 50 or 60 yards between my pursuer and myself. I was pretty well done for, however-so much so, that at one time I felt I must fall out of the

"But luckily, just when I had almost given up all hope of seeing my com-panions again, a Hindu woman appeared on the road before me, and in answer to my inquiries indicated the road to Aring. Following her directions for about two hours I suddenly beheld Dr. Birasky and a small army of natives he had drummed up to search for me, feeling sure that I had fallen into some trouble or other. That was the end of my exciting tide for life and I don't want another like it, I can assure

disfigured. "I tried to foller yer instructions," they are constantly he explained, "but he come durned greeable than a fussy woman-a fusnigh to hangin' me."

SOME WINGLESS BIRDS.

Most Curious of the Lot Is Apteryx, a Native of New Zenland.

There exist all grades in the spread of wings between that of the condor, which is four times the length of the body, whereby the bird is able to rise to the height of nearly 25,000 feet, and the little winglets of the auk, which are of no use to it. The penguins have will read the state of the state still smaller wings, which are nothing more than short, flattened stumps, without proper feathers and covered with a fine, hair-like down, which might be taken for scales. Another group of birds exists, called appropriately brevipennes, the wings of which are so poorly developed as to be wholly unsuited for flight. Among them are some gigantic birds, and also some that have no visible wings on the outside of their bodies, and may, therefore, be properly called wingless. The ostrich is a member of this group. With its bare, callous head and short bill, its long, featherless neck and its massive body, suported by long, half bare legs, ended in two large toes; its very short wings, formed of soft and flexible feathers, and its plume-shaped tail, it presents a very special appearance among birds. The nandous, the American representatives of the trich, have still shorter wings, which have no remigia at all, and terminate in a horny appendage, and they have

The cassowary and the emen also re-semble the ostrich in many points, but their wings are still more reduced than those of the nandou. They are only slightly distinct, and cannot be seen when the bird holds them close up to its body. In the apteryx, the name of which from the Greek, means without wings, the organs of flight are hardly apparent, and consist simply of a very short stump bearing a thick and hooked nail. The apteryx, which is also called kiwi, a native of New Zealand, is the most singular of living birds. The neck and the body are con-tinuous, and the moderately sized head is furnished with a long beak re-sembling the libs. Having long hairs similar to the mustackes of cats at its base, it is different from the bills of all other existing birds in possessing nostrils that open at its upper point. Although the apteryx cannot fly, it runs very fast, despite the shortness of its legs, and can defend itself very effectively against assallants by the aid of its long-nailed and sharpnulled feet. The tall is absent, like the wings. The very pliant feathers are extremely curious, loose, stiky, with jugged barbs, and increase in length as they go back from the neck. The bird is of the size of a fowl, and when in its normal position stands with its body almost vertical and carries the suggestion of a caricature-resembling, we might say, a feathered sack, with only a long-billed head and claws projecting, and one beholding it feels that he is looking at some unflu-ished creature. It is a nocturnal bird. of fierce temper, and has become rare in consequence of the merciless war, that is made upon it. Everything is strange about it, even the single egg it lays, which weighs about a quarte as much as its body. Together with the apteryx, there once lived in New Zealand a bird that reached the beight Appleton's Popular Science Monthly,

#### SHE IS A TYPEWRITER.

But Why Not Give the Job to Some One Who Needs It.

Elise Farrel, whose father is worth from \$20,000,000 to \$25,000,000, drew her first pay as a working-girl on Thursday. She grew tired of a life of case and determined to earn a living. Her father is the Hon. Franklin Farrel, head of the Farrel Foundry and Machine company, of Ansonia, and an owner of several copper mines in the west. She is a grad-uate of Ogontz. She is also an excellent whip and is often seen driving her big bay horse to a light rubbertired runabout in the city streets and

Recently the place of private secre-tary to Mr. Farrel became vacant and she applied for it. She was told that it needed a stenographer and typewriter, so she attended a business college in New Haven, mastered short-hand quickly, and got the job. She attends to her business closely, being at her desk at 8 o'clock every morning opening the mail and assorting it, re-ceiving the answers to the letters from dictation, copying them on her typewriter, and sending them out. She declines all invitations of a social nature which interfere with her work and is an excellent secretary.

Miss Elise's determination to be useful is more remarkable because her father is noted for his generosity to his children. His daughter, Miss Flor-ence Adele, was married to George Clarke Bryant, son of Edson T. Bryant, internal revenue collector, of Ansonia, in December, 1898. As wedding presents Mr. Farrel gave a check for \$250,000 to his daughter, a check for \$150,000 to the bridegroom, and \$20,-000 in cash, "so that they might have some money for the honeymoon," he sald.-New Haven Palladium.

#### Drunk With Cold.

The usual results of exposure to extreme cold, are loss of energy, both physical and mental, followed by drowsiness and disinclination to move; the mental faculties become torpid and the senses numbed, while victim is seized with an irresistible desire to lie down and sleep. If this desire is yielded to the lethargy passes into stupor and death follows. Occasionally these symptoms are preceded by others which resemble those of intoxication, and are due to a pe-culiar condition of the blood, which at a very low temperature takes up an insufficient quantity of oxygen, and so has an injurious effect on the nervous system .It was observed dur-ing the retreat of the French at Moscow that those who were most severe-ly affected by the cold often recled about as if intoxicated; they also com-plained of giddiness and indistinctness of vision, and sank gradually into a state of lethargic stupor, from which it was impossible to arouse them. er instances are recorded in which persons became delirious and died through a short exposure to intense cold.-Exchange.

The late President of Santo Domingo was a soap maker, which proves that a mistake was made when he was assassinated. A country which has plenty of soap must be all right.

It is a good thing to give thanks and a polite thing to say "You are welcome.

"Hense, making, it's 'enuse he's got 'mensles inside." Mary had read the contagious dis-

mae eard that the tacked on the front of the lause. Cleveland Plein Dealer.

A Matter of Temperature.

The little one's mother had said, "Now, doctor, if there is any rise of temperature"-she was great on temperature, by the way-"I will send for you at once. As you know, I have a elinical there, ometer and can take the temperature myself without troubling you to come in for the purpose," Just as I was going to bed I was startled by a violent ring at the bell and, hastening to the door, saw a terrified domestle, who gasped; "Oh, sir, please, sir, do come round at once! Miss Marfory is worse. Missus said I was to tell you her temperature is 108 and is

Scarcely waiting to put on my hat, I rushed round to the house of my little patient and discovered the whole Camily assembled in the sickroom awaiting the end of poor little Marjory, the mother wringing her hands in agony and crying drendfully.

"What's the temperature now?" I al-

most abouted in my agitation.
"Oh," sobbed the mother, "I haven't dared to look since! My poor darling! It was 108, and they say that 105 is always fatal." And she broke down completely.

Without wasting any more time I turned down the blanket and-found that the thermometer had been thrust between the child's side and arm and the bulb imbedded in a freshly applied hot poultice!-Chambers' Journal.

On the Menn In Chile.

For several days I noticed the word "panqueque" upon the bill of fare at the hotel and did not know what it was. There is a brand of wine from one of the Chillan vineyards with that name, and I supposed it was perhaps the same thing referred to, although it was difficult to understand why it should appear among the desserts on the menu at the dinner table and on the bills of fare for breakfast. The best way to find out about such things is to try them, and the next morning, being in an experimental mood, I ordered a "panqueque," which, to our amazement, was an ordinary griddlecake. Then it dawned upon my dull perceptions that "panqueque" spelled pancake. I called the attention of the head waiter to the discovery, and he seemed quite astonished. He could speak English well and claimed to be familiar with the cuisine of America. Therefore he did not see anything unusual in my discovery, and I rather think he wrote the bill of fare himself, for he remarked in a surprised tone: "What do you call a pancake in America?'-Cor. Chicago Record.

#### She Did Die Quick.

Miss Jennie Lee, the famous English actress, was once playing "Jo" in Scotland. She was in the midst of the long and harrowing death scene of poor Jo. The stage was darkened, and the limelight illuminated the pale features of the death stricten boy. People were carries his hands there." sobbing all over the house.

Suddenly, to her consternation, Miss Lee heard the limelight man addressing her in a brawnys Scotch whisper audible to half the house.

"Dee quick, Miss Lee; dee quick!" he roared softly. "The limelight's gin careful not to disgust others by of his and the enemy's troops.

She did die quick, but it was for the purpose of making a speech to that limelight man which he said he would ing your attention to this value peculiarly interesting, as they never fore t
