And it came to pass that after he had advertised his goods there came unto him people from all sections of the county and did buy of him. And when his competitors saw it they marvelled among themselves saying: "How be it that the man is busy while we loaf about the doors?" "Verily, verily, I say unto you, in this fast age of push and rustle it is easier for a camel to enter the eye of a needle than for a business man to flourish without advertising in 'THE FULTON COUNTY NEWS.'"

Humidity is the amount of aqueous vapor in the atmosphere compared with that which is required to saturate it under given conditions as a temperature—specifically called relative humidity. If the atmosphere is completely saturated the humidity is expressed as 100; if perfectly dry as 0. When the atmosphere becomes so saturated that the relative humidity reaches the 100 point there is rainfall. There can, however, be a rainfall in a place where the relative humidity has not reached 100. The expression "relative humidity 96" means that the atmosphere is within four one hundredths for being thoroughly saturated. The humidity varies widely in different places and in the same places at different times.
