

STEPS OFF TO MEET HER.
Amusing incident told by Louisville Courier-Journal.

Sunday when the excursion train from Paris filled with negroes bound from the camp meeting, reached this city, says the Louisville Courier-Journal, it passed the station and went through Cynthiana at the rate of about twenty-five miles an hour, the idea being to get the crowd on board until the arrival at the grounds at the Falmouth pike crossing. Just before reaching Pike street a negro man jumped from the train. Of course, the momentum of the cars carried him along at a terrific pace. His body was going so fast that his legs could not possibly keep up, but they made a valiant effort to do so, and such a lurching motion was given to the train that it stopped for a moment. The man who had jumped from the train, however, was not hurt. He galloped across the gutter at Pike street at tremendous speed, barely missing a telephone pole, flew up into the air, turned a couple of somersaults, and landed all in a heap in the middle of the street. His hands were as big as saucers and seemed to pop out. As he slowly gathered himself together his trousers were split, his knees were bruised and bleeding, his arms were wrenched, his coat-tails were in tatters, and his battered stiff hat was mashed down tight over his ears.

At that moment a negro girl who knew him came along.

"Why, how do you do, Mr. Hopkins?" she exclaimed.

"Why, how do you do?" he answered in deep, calm tones, with carefully measured accent. "How do you do? You are looking quite well—we well! I just stepped off the train to meet you."

Often a woman is so inconstant that after making up her mind as to her age she is unable to stick to it.

When two men are unable to agree they usually leave it to the man behind the bar.

FARM MATTERS.

Hints on Watering.
Sprinkling plants in the garden beds does more harm than good. Better water a few plants thoroughly than just sprinkle all. Make a trench round the plants, all with water several times, waiting patiently for it to soak in, scatter some dry dirt over that you have moistened, and you may be confident that you have put the supply of water where it will do the most good.

Belgian Hares.
One of the best herbs I know of for correcting disorders in the Belgian hare is dandelion, either fresh or dried. Gather the herb any time during the summer or spring, digging up all the roots. Rinse off all the clinging earth from the roots and throw a few handfuls to the hares and note the result with which it will be devoured. For winter use spread the dandelion in a cool loft where it will become thoroughly dried before freezing weather and put away in paper bags or in boxes. A little once or twice a week is all the hares will need in winter.—A. G., in The Epitomist.

Harm of Root Pruning.
Deep plowing among growing corn, after the roots have met in the rows, may cause harm; "root pruning" is a mistake; to break the roots checks the growth, and in hot, dry weather deep cultivation will surely cause the corn to curl, showing injury and suffering, while shallow working will keep it fresh and green. As soon as a crust is formed on the soil it should be broken up to admit both moisture and air, for the one dissolves the fertilizing matter which is in the soil, and the latter affects its decomposition and renders it soluble. So that after a rain which has crusted the surface the cultivator should be started as soon as the soil is dry enough; this tends to hold the moisture and prevents its speedy evaporation.

To Distribute Silage.
Many forms of distributors have been invented, but what is known as the "hopper and bag" plan is far superior to any yet chanced upon, and is shown in the figure. The hopper is about three feet square at the top,

and conformation to generally accepted standards. The first and highest class is the road, carriage and coach horse, which must be of good breeding, from fifteen to sixteen hands high, and a weight of 1100 to 1150 pounds. If well matched such carriage horses are worth a quarter more than when offered singly. The American cob in this class is one of the most profitable, and the animal must be handsome and stylish. Light-grey and mottled carriage horses are the hardest to sell of this whole class. The cab horse is put in the second class by the writer of the bulletin, and the animal must be very useful, chunky and hardy, but this class is not bred by itself, but consists of the cullings from the first class. The bus horse is not a very profitable horse to breed, but if one can combine it with other breeds there is some money in it. The draft horse is one of the best breeds for raising, and the demand is good. But prices vary so much that a good deal depends upon the kind of a draft horse the breeder produces. The cheapest grade sells for \$125, and others up to \$300, with some extra heavy line ones as high as \$350. When heavy draft horses are matched in teams, they bring considerable more, and such teams have sold for \$800 a pair. A good breeder with fine stock to begin with can make more money in raising the draft and carriage or road horses than any others. Between these two he will often have culls which can be disposed of as representatives of the other classes. But in all horse breeding it is necessary that breeding for certain market classes should be held well in view. The markets are becoming more exacting every year, and horses that cannot be classified in one or the other class are drugs in the sales.—Professor S. N. Doty, in American Cultivator.

Decadence of the Potato.
Old farmers know very well that the potato has deteriorated greatly within their recollection. Others, whose soil is not yet gray, may not be quite so well aware of the fact; since the latter have been raising or buying and eating potatoes. Down to the early forties farmers were easily able to grow excellent potatoes. There was a goodness and a meanness about them that would astonish people nowadays. If a farmer could produce the like now he would need to have no anxiety about getting rich. The owners of new varieties extol them highly, but on the plate they are disappointing. They compare poorly with the potatoes any farmer could raise some fifty-odd years ago almost without effort. Now the potato has about as many enemies as anything a farmer cultivates. Rot, blight and scab are the most formidable diseases, all caused by fungus.

Since the fungus that causes rot was first introduced into this country, no crop has been entirely free from it. The potato beetle was first talked about in 1850, and by 1874 had overrun most of the country. After having been fought desperately for twenty-five or thirty years, the beetles are still almost as numerous as ever. I have lately seen an estimate of the amount of Paris green used annually to destroy them. I don't remember the quantity, but it was almost an incredible number of tons. Some think the wholesale and long continued application of poison has affected the potato unfavorably. Possibly, for the poison is applied to the foliage and stems, and the tubers are only thickened stems. Last year scab and rot were very destructive. It is practically impossible to obtain seed potatoes exempt from these diseases. The potato is a native of South America. If seed potatoes were to be systematically obtained from some South American country where these fungous diseases are unknown, it would seem that they might be averted here, for a time at least. Of course, this has been done, and many years ago the merits of the Garnet-Chill potato proved that such experiments may be worth repeating.—S. B. Keat, in New York Tribune Farmer.

COMMERCIAL REVIEW.

General Trade Conditions.
"Bradstreet's" says: Jobbing distribution continues very active and retail business is improving. Now that the corn crop is practically made, and the only possible changes are those of quality, the disposition to book fall orders is restrained at the West and Northwest. At the South the tone of trade reports is notably cheerful, largely owing to higher cotton prices, because crop accounts are not so favorable as a week ago.

Collections are as a whole good, and the concentration of reports as to this as to money conditions point to good supplies of the circulating medium in the country at large.

The selling position seems to be the strongest side of the price situation, except possibly in the cereals and agricultural products generally. Everywhere the financial position of farmers enables them to market their products slowly, and no accumulation of moment is recorded except in cattle receipts, which this week surpassed all records.

A large distribution of cotton goods is in progress at the West, and the firmness in the Eastern grade is notable in view of the relatively quieter tone of demand. Woolen goods are firm and the mills are actively employed.

The coal situation deserves notice. The delay in the ending of the anthracite strike has increased the pressure on the bituminous product, and prices for that article are now at least one-quarter higher than the low point before the strike began. Anthracite production is slowly but surely increasing, as more mines and miners go to work, but the necessary increase in retail buyers make fancy prices for what is left. A long season at full time will be necessary to restore stocks of anthracite to old dimensions.

Wheat, including flour, exports for the week ending September 18, aggregated 5,435,323 bushels, against 5,444,142 last week, 5,450,574 in the corresponding year and 5,357,877 in 1900. Wheat exports since July 1 aggregated 55,537,065 bushels, against 72,181,845 last season and 38,519,600 in 1900. Corn exports aggregated 49,508 bushels, against 91,512 last week, 61,488 last year, and 1,134,245 in 1900. For the fiscal year exports are 980,659 bushels, against 1,132,934 last season and 39,791,241 in 1900.

What Results from Electricity.
Although the predictions freely made a few years ago that the development of electric traction would quickly drive horses from the field of labor have not been fulfilled, yet the Electrical Review cites statistics to prove that the disappearance of the horse is actually taking place, although so slowly as not to attract much attention. In Paris the number of horses fell off about 8 per cent between 1901 and 1902. In London the decrease in the same time was 10 per cent. In Berlin, Vienna and St. Petersburg a similar falling off is shown by the census of horses. In New York it is estimated that the number of horses has decreased 33 per cent.

B. B. SENT FREE.
Cures Blood and Skin Diseases, Cancer, Boils, Itching, Scabies, Eczema, Pimples, Scabby, Sealy, Itching, Eczema, Ulcers, Eating Sores, Scrofula, Blood Poison, Bone Pains, Swellings, Rheumatism, Cancer. Especially advised for chronic cases that doctors, patent medicines and Hot Springs fail to cure or help. Strengthens weak kidneys. Druggists, \$1 per large bottle. To prove it cures B. Rheumacide The Great Blood Purifier

CURES RHEUMATISM, CATARRH, INDIGESTION, CONSTIPATION AND KIDNEY TROUBLES.

PROMINENT RAILROAD ENGINEER SAYS:
RALEIGH, N. C.
I took 3 or 4 bottles of Rheumacide several years ago for a very severe attack of rheumatism in the muscles of my back, which confined me to my bed for 6 or 7 weeks. RHEUMACIDE HAS MADE A PERMANENT CURE, as I have never had any symptoms of it return. I now take it occasionally as a general tonic, and its effects are all one could wish. Yours very truly,
C. H. BECKHAM.

TREASURER OR. H. CO., N. C. TESTIFIES AS FOLLOWS:
HILLSBORO, N. C.
I had rheumatism for a number of years. About four years ago it became quite severe. I used several remedies, but never got any permanent relief until I began to take RHEUMACIDE on the advice of a friend. It cured me at the first use. I feel that it has improved my general health very much. I regard it the best remedy for rheumatism. Respectfully, E. A. DICKSON.

For sale by Druggists, or sent expressage prepaid on receipt of \$1.00.
BOBBITT CHEMICAL CO., BALTIMORE, MD.

A Cough

"I have made a most thorough trial of Ayer's Cherry Pectoral and am prepared to say that for all diseases of the lungs it never disappoints."
J. Early Finley, Ironton, O.

Ayer's Cherry Pectoral won't cure rheumatism; we never said it would. It won't cure dyspepsia; we never claimed it. But it will cure coughs and colds of all kinds. We first said this sixty years ago; we've been saying it ever since.

Three sizes: 25c., 50c., \$1. All Druggists.

Consult your doctor. If he says take it, take it as he says. If he tells you not to take it, then don't take it. He knows. Leave it with him. We will sell it for you.
J. C. AYER CO., Lowell, Mass.

A HOPPER AND BAG SILAGE DISTRIBUTER

quite deep so as to get pitch, and is suspended from the roof so that the cut silage is thrown from the carrier into it. A is a header board for the silage to strike so as to fall straight down and so mix corn, leaves and stalks all together. B is the hopper and C is a tube made by cutting through the ends of old gunny or fertilizer sacks and making a tube or hose of them and suspending it under the hopper. A cord is attached and as the silage comes down the tube it is "led" about, and the silage thoroughly mixed and put exactly where wanted, without lifting or throwing a pound. Some substitute old joint of stovepipe for the bags, and in either case as the silage comes up to the tube a section or two is taken off and the filling proceeds.—Correspondence Ohio Farmer.

Mending Split Trees.
Split limbs of trees, when they are of such a nature that they cannot be removed except to permanently injure the tree, can be mended in the following way. Any loose splinters should be cut away, then raise the limb into proper position. While firmly held in place bore two holes through the broken and unbroken part, one hole below the other, the space between holes varying with the size of the broken limb. In these holes place bolts of the same size to fill up holes completely. Use bolts with small heads and place a washer under nut, draw it tightly and in a few years both ends will be covered over with growing wood and the tree will be as strong as ever.—The Epitomist.

Farm Dairy Barn.

The barn illustrated herewith shows the plan of the Pennsylvania dairy barn of W. L. Matthews. The outside dimensions are 40x96 feet with 8-foot basement and 20-foot superstructure.

ARRANGEMENT OF BARN.
The basement provides room for six horses, thirty-eight cows and has six large box stalls additional, all so arranged as to make a very desirable barn for the purposes intended. The horse stable is unusually wide, which, however, is no bad fault, and two good harness closets are provided to keep the harness free from dust and danger. The superstructure has two 16-foot drives, a 16-foot bay at each end and a 32-foot bay between the two drives, at one end of which is a large granary. Many readers may find this plan adapted to their needs.—John L. Sawyer, in Ohio Farmer.

THE SURGEON'S KNIFE

Mrs. Eckis Stevenson of Salt Lake City Tells How Operations For Ovarian Troubles May Be Avoided.

"DEAR MRS. PINKHAM—I suffered with inflammation of the ovaries and womb for over six years, enduring aches and pains which none can dream of, but those who have had the same experience. Hundreds of dollars went to the doctor and the druggist. I was simply a walking medicine chest and a physical wreck. My sister residing in Ohio wrote me that she had been cured of PINKHAM'S Vegetable Compound, an advised me to try it. I discontinued all other medicines and gave your Vegetable Compound a thorough trial. Within four weeks nearly all pain had left me; I rarely had headaches, and my nerves were in a much better condition, and I was cured in three months, and this avoided a terrible surgical operation."—Mrs. ECKIS STEVENSON, 250 So. State St., Salt Lake City, Utah.—\$5000 forfeit if above testimonial is not genuine.

Remember every woman is cordially invited to write to Mrs. PINKHAM if there is anything about her symptoms she does not understand. Mrs. PINKHAM'S address is Lynn, Mass.

"Nerves" of Machinery.

It is known to most craftsmen that not only their own muscles, but the tools with which they work are sometimes seized with something like "cramp." Old violins, for instance, at times, take fits of refusing to give out the mellow sounds which are their wont, even though played upon by a Joachim or Sarasate; and their frame he never so cunningly, the instrument will emit nothing but discordant squeaks. At such times the violinist is said to have caught cold, and probably some temporary molecular derangement has affected it. Bowed instruments also at intervals refuse to obey the behests of the most skillful craftsman. The tool is then said to be "crossed," and has to be laid by for a while, when it recovers its tone. Even large machines like railway locomotives are known to go on "strike," just as do human railway servants; and experienced drivers know that at these times the locomotive cannot be compelled to work, although examination may show that it has not a nut loose or a screw loose, a rod or rivet out of place. Machinery is thus as susceptible as its drivers to get out of order, and sometimes in the most unaccountable and mysterious fashion.

ST. JACOBS OIL

POSITIVELY CURES

Rheumatism
Neuralgia
Backache
Headache
Feetache
All Bodily Aches AND CONQUERS PAIN.

No small part of the cause of blackberries and raspberries drying up on the cause may be attributed to the work of the little red spider. As this insect thrives best in hot and dry weather, the cause is often said to be the drouth or the heat, but examination of the leaves will often show these little insects present in great numbers, and the leaves so eaten by them on the under side that they dry and shrivel up as if they had been scorched by fire. When the leaves can no longer serve as the lungs of a plant, growth must stop. Two sprays with kerosene emulsion, one just after the blossoms fall, and the other just before the fruit ripens, will often prove more beneficial than irrigation. For the rust or anthracose of the canes use the Bordeaux mixture.

The Demand for Horses.

This treatment at once stops falling hair, removes crusts, scales, and dandruff, soothes irritated, itching surfaces, stimulates the hair follicles, supplies the roots with energy and nourishment, and makes the hair grow upon a sweet, healthy scalp when all else fails.

Millions of Women

The CUTICURA SOAP, assisted by CUTICURA OINTMENT, for preserving, purifying, and beautifying the skin, for cleansing the scalp of crusts, scales, and dandruff, and the stopping of falling hair, for softening, whitening, and soothing red, rough, and sore hands, for baby rashes, itching, and chafing, in the form of baths for annoying irritations, inflammation, and ulcerative weaknesses, and for many sensitive, antiseptic purposes which readily suggest themselves to women.

CUTICURA SOAP, to cleanse the skin; CUTICURA OINTMENT, to heal the skin; and CUTICURA RESOLVING PILLS, to cool the blood. A SPECIAL SET is often sufficient to cure the most burning, disfiguring, itching, burning, and scaly skin, scalp, and blood humors, rashes, itching, and irritations, with loss of hair, when all else fails.

Get throughout the world. British Patent 21-20. Charleston, S. C., London, French Patent 21-20. San Francisco, Cal., New York, N. Y., Philadelphia, Pa., Boston, Mass., St. Louis, Mo., Chicago, Ill., Cincinnati, Ohio, and all other cities. Beware of cheap imitations. The genuine is sold by all druggists and chemists.
