by Was Inconvenient. A countrywoman entered a general tore in Towanda, this State, and exchanged a pail of roll butter for groceries and household articles, including a large box of matches. The following day she returned, and, putting the matches on the counter, complained that they were no good—that she

that they were no good—that she couldnt strike them. "Queer!" commented the storekeeper. use 'em altogether, and have no

Then he took three or four from box, scratched them one after another on his trousers, easily produced a light, and then assured her the matches were all right.
"Mebbe they be," she replied; "but I have too much to do to walk three miles here and back whenever I want

a light for the sake of striking the matches on your trousers!"

An Annual Occurrence.

There was a wordy row in the next flat, and by force of habit we rubber up

the areaway.
"I tell you, John Skinner," yells Mrs.
Skinner, "I must have a new fall hat,
sir! There is nothing left of my last
fall hat but the frame, sir—the frame,
just the wires! And no woman can't the areaway. wear no hat they ain't nothing left of

but the wires!"

Enough! Mrs. Skinner appears to have found a skeleton in the closet, and we reverently draw hence.

On the Ruces.

The paymaster of the Tower of Babel stood on the eighth floor liquidating the week's incumbrances. Inadvert-ently he let a few coins slip through his fingers and fall to the cellar.

"He's a sport, all right," said the carpenter three floors below, as he rubbed a bruised pate. "He's a sport. Just look at the money hes dropped on

FARM MATTERS.

Trial Crops. The largest trial crops have been obtained where fertilizers were applied liberally, and in every case the increased crop more than paid for the additional expense of fertilizers. The plants do not use all of the fertilizers the first year, and the succeeding season assists in the gain from the application.

Salt as a Fertilizer.

There are many inquiries about sult as a fertilizer. Salt is rarely of any use as a fertilizer proper. The elements of which it is composed are found in most soils in sufficient amounts for all except for such plants as asparagus, whose natural home is by the seaside. But salt is found in practice to have much more value than would be supposed. Its effect is best on rich tand in vegetable matter, which the salt, in the small amounts usually applied, helps to decompose. In larger quantities salt is a preservative from decomposition, but no farmer would think of applying enough to injure his

Worms as Soil Renovators.

Earth worms are not soil formers, for they are seldom met with in soils that are destitute of organic matter. They are simply renovators. Every time a worm is driven by dry weather. or any other cause, to descend deep, it brings to the surface, when it empties the contents of its body, a few particles of fresh earth. At the same time it fertilizes the subsoil by opening up passages which encourage the roots of plants to penetrate deeper, these passages being lined with excreted matter, which provides a store of nourishment for the roots. On mendow land Darwin found these worm casts amount annually to eighteen tons an acre, and on good arable land to about ten tons.-American Fertilizer.

A Small Work Bench.

'A small work bench is very convenient for doing small jobs of repairing. Get a long, deep, but narrow, empty grocery box and mount it upon legs upon its side as shown. This provides not only a work bench, but a shelf be-

low it for keeping tools. The cover of the box can be hinged to the front for the purpose of keeping the tools more secure. There is not a farm in the country that can afford to be without at least a small bench on which to make repairs and to construct the small articles needed in carrying on farm operations.-New York Tribune Farmer.

Growing Blueberries From Seed. The Maine Agricultural Experiment Station reports that they have found it comparatively easy to grow blueberries from seed. They used good potting soil, to which leaf mould had been added, washed the seed from the pulp, and allowed it to freeze during the winter, then sowed it in the spring packed it down with a board and covered with a slight sprinkling of soil. They were handled once, and later in the summer were transferred to a cold frame, where they were covered with litter during the winter. The next spring they were transplanted into shaded until established and made a good growth during the summer. They say the low blueberry, "Vaccineum Pennsylvanicum," will fruit in three or four years, while the high bush, "Vaccineum corynbosum." requires from four to six years. We think the shortest period they name for either is at least a year too long, but will not dispute the matter. Both these varieties are relatively easy to transplant either from swamps or upland, and they may be propagated by grafting or division of the roots. As we called attention to the possible cultivation of these berries several years ago we feel an interest in this matter. and hope to see them grown as commonly as strawberries and blackberries are now .- The Cultivator.

Systematic Storing of Humus. One of the greatest advantages I obtain from a cover crop is the constant storage in the soil of humus. A soil rich in humus is also a soil properly drained. In many soils the lack of humus permits the best elements of fertility, no matter in what form applied, to leach out and go to waste. the subsoil, but even there they are wasted to most crops. Our surface feeding crops will not go down to the subsoil after rich humus or fertility leached down there, because of a toc porous and open surface soil. The cover crop plants the humus in the sur face soil, and thereby holds the fertil izing elements of potash, phosphoric acid and nitrogen. They are held there in a position where the roots of the plants can most readily reach and util

Any cover top will do this work Some, of course, answer the purpose much better than any others, but a crop that furnishes an abundance of green foliage will in time fill the sol with rich humus. Therefore cover crops have been used by me continu ally for systematic storing of humus ir the soil. My land is so open and por ous that nearly all fertilizers would quickly leach through if it were not for this practice of planting cover crops to prevent the waste. Humus in the gives atrength and vitality to plants. It furnishes the bone and marrow to the soil, and makes it ricl possibilities. When the soil to drained steadily year after year, and no new humus added, it becomes life less, and no amount of artificial fertill zation will compensate for the loss.— B. L. Andress, in American Cultivator.

POULTRY NOTES

Killing Young Chickens The chicken is suspended by the legs from a long piece of scantling, which extends across one corner of the chicken yard, resting on the top rails of the fence. It is stuck in the upper back part of the mouth and bleeds to death before it is removed. Father kills them. using his pocket knife. I do the picking, but never begin until they are dead. I sit on a low chair, with a

chicken on my lap. Never scald a broller or roaster. After all the feathers are plucked I remove all the pin feathers, using a dull knife; the feather is grasped between the knife and thumb and pulled out. When perfectly clean it is thrown into a pall of cold water for an hour or two, then scrubbed all over, and hung up in the cellar until called for which is always if possible the same day it is killed. It takes me about onehalf hour to dress a chicken,-Mrs, Leonard Johnson, in American Agri-

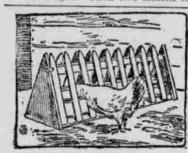

culturist.

Breeding For Weight and Eggs. For market fowls of greatest weight select a strain reputed to combine gigantle proportions with fine, tender grain and delicacy of flavor. It is advisable to secure a big hen as well as a huge cock, instead of purchasing eggs from stock you have never seen, Of this hen's eggs set only the largest. of course avoiding double-volked ones, In future seasons pick out the largest hens for breeders and set their largest eggs. By this culling process you will work into a flock of mammeth hens, changing only the cock when fear of inbreeding is incurred.

For layers follow methods in line with this. Choose a laying strain, then for breeders separate the best layers of the flock, each year separating the best layers of the season's hatch and killing off the rest. One may in time breed into a good flock by breeding from his own largest hens for weight, and from his best layers for a laying strain, but quicker and surer results are obtained by beginning with a pair or trio of known reputation.-L. L. Trott, in Orange Judd Farmer.

Keeps the Feed and Water Clean.

Here is a simple arrangement which will be much appreciated by the farmer and keeper of poultry, the patent on the device having been granted to Ernest H. Mack. In constructing the feeder two triangular boards are secured to the end of a base board of the desired length. Then two slatted sec-

DEVICE FOR THE POULTRY YARD. tions are hinged to the sides of the base, with buttons near the apex of each triangle to lock the sides together. To insert the feed and water dishes the buttons are turned and the slatted sides allowed to drop back on the ground, affording free access to the interior. The advantage of this feeder is that it prevents crowding, and keeps the fowls out of the dishes. Provision is also made for heating the feed and water in cold weather by placing a lamp in a protected easing beneath the water reservoir.-Philadelphia Record.

Good Layers. A few good layers like a few good cows come by accidental breeding. This number can be greatly increased by selection and beginning at the foundation-the breeding stock. Instead of selecting the eggs for hatching from the egg basket or at random, as has been the custom for years, it would be well to select eggs from hens that are unusually good layers. It does not require an adept to select the business hen. One can very readily become acquainted with the hens that are good layers. The hustler is always busy. If no other means may be at hand to select eggs, it would be well to have a pen or a house or a room where several of the best layers can be kept and their eggs used for hatching purposes.

In buying eggs it will pay to give a little advance over the ordinary prices to obtain eggs from a breeder who has \$4 00a5 35 employed methods that will increase this habit in his hens. It is much more to be admired and sought for than eggs of standard merit which have been selected on account of their feathering. One should manage his poultry as he does his dairy if he would have best results. This is for the purpose of obtaining the most profit. The hens should never be permitted to become overfat, which can be obviated by feed-Sometimes they merely leach down to ing the grain in straw or chaff. Never use eggs from a ben that has been sick with any constitutional disease. Constitutional diseases can be transmitted, and close attention should be given this matter.-Poultry Farmer

Hints.

Keep the feed box full. Onion tops chopped fine are encellent for poultry.

Comfort for the fowls is synonymous with profit.

Young chickens should be fed many times during the day. Fowls suffer more from dampness than from any other cause.

A liberal dust bath for fowls is the

best protection against vermin. Fowls having a free run will find their own feather-making food. Cedar brush hung inside the poultry

house will eradicate chicken lice, In feeding fowls study nature, and give them things they like the best.

Turkeys when first hatched are very delicate and require considerable care. Feathers should be plucked dry. Scalding detracts from the flavor of the

Meals should be mixed dry and crumbly; it gauses iliness when too COMMERCIAL REVIEW

General Trade Conditions.

R. G. Dun & Co.'s weekly review o trade says: Distribution of merchandise shows no fininution, and prospects are bright or continued activity. Dealers in many lines are wigent for prompt shipments calling upon jobbers and manufacturers for goods already overdue. This indication of reduced stocks is a good sign, and tends to sustain quotations. Western reports are especially favorable, and the early marketing of cotton has brought distinct improvement at the South. Voluntary advances in wages have been announced in a num-ber of instances, while the labor situation is more satisfactory, although not entirely free from controversy.

Supplies of cotton goods do not ac-cumulate in first hands, the demand concumulate in first hands, the demand continuing to keep pace with production, which holds prices steady. Few export sales are reported, not through any lack of inquiry, but owing to the fact that sellers will make no concessions. Wool averaged slightly higher in sympathy with the London sales, but further declines occurred in hides and leather has become dull. New England shoe shops have received large orders for winter goods, assuring activity for for winter goods, assuring activity for two or three months at some factories Strictly commercial failures in the United States during the first nine months of 1902 numbered 8676, with defaulted liabilities of \$85,407,490. Last year there were 8083 failures for \$80,500.852. In addition, there were 47 failures of banks and other financial intrinsical and the state of stitutions with liabilities of \$28,027,198, against 61 in 1901, involving \$17.295.554. the exhibit is less satisfactory than last year's, only one other year during the past two decades made as lavorable a showing.

Bradstreet's report says: Business lailures in the United States for the week ending October 2 number 164, as tgainst 172 last week, 175 in this week ast year, 177 in 1900, 146 in 1899 and 163 in 1898. Canadian failures not

In certain of the metropolitar churches whistlers have been added to the choirs. It is said that their rendition of the music is not only pleasing but very artistic. In the near future w

may expect some such announcements as the following:

Mt. Puffan Blowso, the eminent whistler, will render "The Four Winds of the World" and "Sweet Evening Breezes" at the N. P. Church this evening the such as the such as

Mr. Rattlan Clack, the reformed min-trei, will give "These Bones Shall Rise Again" on the former implements of his profession at the Vaudeville Tab-arnacle during the evening services to-

Prof. Pounden Hard, the bass drun virtuoso, has been added to the choir of the Little Church Around the Bend At the next service he will play a solo, entitled "Marching Along."

"Though I Become as Sounding Rrass" will be the number rendered by Miss Clashy Clang, the cymbaliste, at the revival services in the big tent to-

Aucestral Marks.

After a long, dusty walk to a country town, and a morning spent in poring over ancient records, an enthusiastic genealogist returned with these memo-canda concerning his ancestors: "Caleb Forbes—His earmark is a

cross on the left care and a half-panny under the same care and a split on the top of the right care." "John Starkweather—His caremark is a square cross on the left eare and a split on the hind side of the right eare, split downward."

'Oh! what does this mean?" cried his wife. "How terrible! John, I wish you let genealogy alone. What crimes do you suppose they had committed?"

"What's the matter, my dear."
"Why, this is the record of the way
the criminals were branded, isnt it?" "What!" shouted the proud genealogist. "My ancestors branded. These are the marks of their cattle—among the first on record"—
"I am relieved," said his wife.

Results of a Temperance Lecture.

Two maiden sisters of mature year had been to a temperance lecture. To demonstrate the disastrous effect of al cohol upon life, the lecturer had pour ed a portion of whisky into a glass which contained water and a mass of lively animalculae of different unsigh shapes and sizes. The result of the mixture was that the shoals of ugly looking fishes were soon bereft of life and were seen floating helplessly in the

On the way home, when nearing a sa on, one of the sisters remarked to the

Mary, will you go in and get some v.trisky? Some whisky!" astonishingly re-

matked the other.
"Yes, dear, for I really can never again drink water with all those horrible things floating about. I would rather
