

Miss Agnes Miller, of Chicago, speaks to young women about dangers of the Menstrual Period - how to avoid pain and suffering and remove the cause by using sun. For about eight years the or-Lydia E. Pinkham's Vegetable Compound.

*To YOUNG WOMEN: - I suffered for six years with dysmenor-rhea (painful periods), so much so that I dreaded every month, as I knew it meant three or four days of intense pain. The doctor said this was due to an inflamed condition of the uterine appendages caused by repeated and neglected colds.

"If young girls only realized how dangerous it is to take cold at this critical time, much suffering would be spared them. Thank God for Lydia E. Pinkham's Vegetable Compound, that was the only medicine which helped me any. Within three weeks after I started to take it, I noticed a marked improvement in my general health, and at the time of my next monthly period the pain had diminished considerably. I kept up the treatment, and was cured a month later. I am like another person since. I am in perfect health, my eyes are brighter. I have added 12 pounds to my weight, my color is good, and I feel light and happy."-MISS AGNES MILLER, 25 Potomac Ave., Chicago, III.

The monthly sickness reflects the condition of a woman's health. Anything unusual at that time should have prompt and proper attention. Fifty thousand letters from women prove that Lydia E. Pinkham's Vegetable Compound regulates menstruction and makes those periods painless.

READ WHAT MISS LINDBECK SAYS:

"DEAR MRS. PINKHAM: - Lydia E. Pink-ham's Vegetable Compound has greatly bene-fitted me. I will tell you how I suffered. My trouble was painful menstruation. I felt as each month went by that I was getting worse. I had severe bearing-down pains in my back and abdo-

men. "A friend advised me to try Mrs. Pinkham's medicine. I did so and am now free from all pain during my periods."-JESSIE C. LINDBECK, 1201 6th Street, Rockford, Ill.

FREE ADVICE TO WOMEN. Remember, every woman is cordially invited to write to Mrs. Pinkham if there is anything about her symptoms she does

Passassessessesses Early Tomatoes.

For starting early tomato or other plants in the house or in hot-beds use sods cut into three inch cubes or use old tin cans with the solder melted off, or little paper boxes which have only to be wet when placed in the ground. The transplanting can then be done easily and well without checking the growth of the young plants.

Feeding Corncob Meal. .

It is doubtful if there is any value. from a standpoint of nutrition, in corncob meal, its chief value being that when fed with the meal of the corn it prevents the impaction of the latter in the stomach of the animal, something that must be done when large quantities of corn are fed. It is not advised that the mixed product of the market be bought, but if one wishes to determine for bimself the value of the mixture with his particular herd. have the corn on the cob ground and then mix it with corn not ground with the cob, in varying proportions until the proportion is obtained upon which the stock gives the best results. This is the only safe way of feeding it.

Good Orchard Treatment.

In central New York there is a fourticles, it at once shows a strong attraction for water in the liquid form. teen-year-old orchard that has always The water and the surface particles been managed on an exceedingly senseem to desire the closest touch with sible and profitable plan. The branches are trained to the spreading habit fluid, it spreads out over the surfaces which opens the tree to the air and sun. For about eight years the orof the minute soil particles, enters into the pores within the particles and fills the capillary spaces between them, crops, which require therough culti-A hard rain packs the ground, the vation like corn, beans and potatoes. moisture, however, going into the "Ihen it was seeded down with alfalfa ground that has been loosened instead and inoculated. This developed a very of flowing away. Water will evapothick sod which is cut three times a rate from the ground during warm. year for hay. This hay is fed to stock and then the manure is all hauled dry days, and as the molsture from the surface is lost that from below back again and spread around the rises by capillary attraction to take trees. Under this system the orchard has made a very remarkable growth.

Manure For Clover Lands.

Considerable has been written in this department in favor of spreading the manure on the farm during the winter as fast as it is made, provided the weather will permit. Undoubtedly this method of disposing of the manure dampens the surface the stirring of for the benefit of the crop applies to any soil that is reasonably level, but its good effects are more noticeable

on clover lands than elsewhere in the experience of the writer. On every open day during the winter the manure is carried from the barn and put on the clover until such fields Lave received all needed.

The result is that the clover gets an early start and when it is to be plowed under for the corn crop, we follow clover with corn in the plan of rotation, it is two feet high and all that it has gained from the manure is turned back to the soil for the benefit of the succeeding crop. This is sensible ar-gument, is it not? Try it and see how much greater profit is made from the

manure supply. Good Pruning.
