

SADIE ROBINSON.
Pretty Girl Suffered From Nervousness and Pelvic Catarrh—
Found Quick Relief in a Few Days.

NERVOUSNESS AND WEAKNESS CURED BY PE-RU-NA.

Miss Sadie Robinson, 4 Rand street, Malden, Mass., writes:
"Peruna was recommended to me about a year ago as an excellent remedy for the troubles peculiar to my sex; and as I found that all that was said of this medicine was true, I am pleased to endorse it."
"I began to use it about seven months ago for weakness and nervousness, caused from overwork and sleeplessness, and found that in a few days I began to grow strong, my appetite increased and I began to sleep better, consequently my nervousness passed away and the weakness in the pelvic organs soon disappeared and I have been well and strong ever since."

Dyspepsia Sick Headache Constipation...
The Three "H's" That Make Life a Burden.

Nature's Great Remedy

In Use for Almost a Century.
SOLD BY ALL DRUGGISTS.
CRAB ORCHARD WATER CO., LOUISVILLE, KY.

Kyrie Bellows says actors are born and not made.

Cures Eczema, Itching Humors.
Especially for old, chronic cases take Botanic Blood Balm. It gives a healthy blood supply to the affected parts, heals the sores, eruption, scales, scabs; stops the awful itching and burning of eczema, swellings, suppurating, watery sores, etc. Druggists \$1 per large bottle. 4 bottles \$2.50. 6 bottles \$5.00, express prepaid. Sample free and prepaid by writing Blood Balm Co., Atlanta, Ga. Describe trouble and free medical advice sent in sealed letter.

Danjuro, the great Japanese tragedian, is also a most skillful dancer.

AN AWFUL SKIN HUMOR

Covered Head, Neck and Shoulders—Suffered Agony For Twenty-Five Years—
Until Cured by Cuticura.

"For twenty-five years I suffered agony from a terrible humor, completely covering my head, neck and shoulders, discharging matter of such offensiveness to sight and smell that I became an object of dread. I consulted the most able doctors far and near, to no avail. Then I got Cuticura, and in a surprisingly short time I was completely cured. I advise all those suffering from skin humors to get Cuticura and end their misery at once. S. P. Keyes, 149 Congress Street, Boston, Mass."

Lesson of Memorial Day.

It is well that on one day in the year the high example of the Union soldier should be held up before our people. Love of country consists in service rather than in profession. Public good must ever be preferred to private good. And surely when so many Americans were willing to give all that they had for the country, we of to-day ought at least to be willing to forego mere personal advantage when it can only be won at the expense of the land which we all love. This is the lesson of Memorial day, and it is one that we greatly need to learn.

ALL DONE OUT.

Veteran Joshua Heller, of 708 South Walnut street, Urbana, Ill., says: "In the fall of 1890, after taking Doan's Kidney Pills I told the readers of this paper that they had relieved me of kidney trouble, disposed of a lame back with pain across my loins and beneath the shoulder blades. During the interval which has elapsed I have had occasion to resort to Doan's Kidney Pills when I noticed warnings of an attack. On each and every occasion the results obtained were just as satisfactory as when the pills were first brought to my notice. I just as emphatically endorse the preparation to-day as I did over two years ago."

Foster-Milburn Co., Buffalo, N. Y., proprietors. For sale by all druggists, price 50 cents per box.

The Farm

Seed Potatoes.
If the seed potatoes are scabby, they should be treated with a mixture of one pint of formalin to thirty gallons of water. Sacks of the seed potatoes are suspended in this solution for an hour and a half, allowed to drain and spread on the barn floor to dry.

Transplanting Plants.
When transplanting plants, whether grown from seeds or cuttings, to the open ground, care should be taken to press the earth firmly down upon the roots and to give a thorough watering afterwards. If the days are warm, a partial shading will be found beneficial for the fruit two or three days.

Skim Milk For Pigs.
On any farm where pigs are raised and skim milk is available, it may be fed with profit in connection with grains of various kinds. To use the skim milk without the grain is not getting the best out of it. The usual plan of feeding skim milk to pigs from two to three months old is to make a mixture of middlings or ground corn with five times the quantity of skim milk. This ration furnishes about the same nutriment that does the milk of the sow, and the pigs will thrive on it. Some pig raisers try a ration consisting of one part of middlings, one part of oatmeal and four parts of ground corn mixed with water in lieu of the skim milk, and find it fairly satisfactory. Considerable care must be used in the feeding of young pigs, and it pays to try and arrange a ration which will keep them growing as steadily as possible.—Indianapolis News.

Objects to the Bank Barn.
I do not like a bank barn; my father had one 45x70, costing \$1000, and I would as soon have one of the same size without the bank. The barn should front south; it cost considerable to make the wall for a bank barn, there should be the wall under the wall, or some way to prevent water from coming under in the wet time. I never saw a bank barn that water did not seep under. We have had to carry water out in buckets and the ground is rolling. I know of six or seven costly bank barns, and the owners do not like them. One of my neighbors is talking of moving his barn off from the wall, and set it on the ground. You may have a team out of a bank barn in real cold weather and stop them, and you will think they have a chill.

All grain may be put in the basement by chutes like flouring mills run their grain. Have a small bin in the basement under the chute, with a small hopper on the upper end; have this in crib or granary. You can load wheat in wagon by same plan; bin over chute to barn; stand wagon under; hang sack on; when full is in the wagon.

Bank barns are not the place for sheep. They are too damp. You can keep them for a short time, say while lambing.—W. W., in Indiana Farmer.

Handy Stock Cart.

There is hardly a farm where any amount of stock is kept on which a stock cart built similar to our illustration would not prove itself indispensable in course of time. Two discarded buggy wheels worked over at a blacksmith forge, a drop axle for this cart, says the Ohio Farmer. In the cut, A shows the axle, which should be left standard track width, pieces one foot in length being inserted near the

STOCK CART FOR THE FARM.

stubs at each end which forms the drop in axle to lower the bed nearer the ground. A bed is made as shown in illustration. Just the width to fit into the axle and about five feet in length, and bolted to the axle near the middle of the bed. A cart handle is bolted upon the front, and the rear is fitted with two doors and a good, strong latch.

This cart can be readily backed up, when mounted upon wheels, to any pen, the rear end dropped to the ground, doors closed behind, the cart attached to the rear of any other vehicle, and the animal transported as many miles as desired, with ease. By making the front end gate and cart handle detachable, this "rigging" can be wheeled up to the rear of a wagon and used for a chute in leading hogs or sheep. These carts are very popular here and are very appropriately dubbed "stock chariots" by their owners.

Poultry Notes.

Try feeding little chicks a dry ration of cracked grain, seeds, etc. It is better than Johnny cake, corn dough or mash.

Place a self-feeding box of grain in the coop so that the chicks can eat what they want. There is little danger of overfeeding growing stock on free range.

If hens on free range are given a small feed of fresh-cut bone once a day, or a box of beef scraps and granulated bone is placed in the henhouse, they will produce more eggs.

Keep the brooders and colony houses clean and look out for red mites and lice on the chicks. Incubator chicks are hatched free from lice, but it does not take long to contract them.

Set turkey hens, and if you have plenty of eggs, all the incubator. Arrange so the hens and incubator will hatch at the same time, then you can give all the polts to the turkey hen.

Keep the chicks growing. Too often after chicks have left the brooder or have been weaned by the hen they get insufficient food to make the most rapid growth. Especially is this true of chicks on free range.

Plant sunflowers outside the wire of the poultry yard, and in and by waste places. They will afford shade during the summer and the hens will relish the seed. If planted inside the yard

they must be protected until out of reach of the hens.

Parsnips For Cows.

It is said that parsnips are by far the richest of the root crops for feeding. They are fed largely to cows in the Channel Islands, we are told, though in this country parsnips are reserved for table use. In a reference to this matter of parsnips for cows Mr. A. H. Franklin in referring to his own experience in the American Dairyman says:

"While the yield of parsnips is not so great as the yield of turnips, mangel or carrots, their extra value as well as their especially valuable as feed for milk cows. Another feature in their favor is the pleasant flavor."

"In feeding parsnips my experience is confined to the surplus from the garden at digging time in the spring. We never fail to grow a row or two of parsnips for home use as soon as the frost goes out in the spring. In our anxiety to have enough we usually have a few bushes to spare. These go to the neighbors and to the cows, and I often think the cows appreciate them the most. At any rate, they give an additional milk flow, and we never have been able to detect any objectionable odor in the milk. It is our intention hereafter to put in about five times as many parsnips as usual and give the cows a liberal treat next spring."

"One reason why parsnips are not grown for stock or home use as generally as they should be is that they really are not developed until the frost draws out of the ground in the spring. Then the feeding time is so short between snow and growing time that the feeding or eating stage is passed before any considerable quantity can be used. The practice of digging parsnips in the fall and wintering them in cellars is obtainable, for the reason that in the fall parsnips are very poor vegetables."

Staking and Tying Tomatoes.

For the family garden I favor staking and tying tomato plants, for the following reasons: I have never grown tomatoes on a large scale, so can't say whether it will pay to stake them or not where growing them in great quantities. Most every family wants a few vines in their kitchen garden, and not one garden in twenty is absolutely chicken proof, and about the time your tomatoes are becoming ready for the table, you go in your garden and find the finest ones ruined by the chickens, when they are grown in the sprawling way, but not so when you have them trained to stakes. Mr. Chicken may get a few next to the ground, but after that he is done for the season, and you can let chickens run among your vines and catch insects and they won't bother your tomatoes. This is a great advantage in garden culture, I think. Then you can keep them in a much smaller space, and keep them free from weeds and your garden looking neater by trailing to stakes. When the vines grow at will they can be kept clean till about the time they begin to get full of fruit, then down they go, and who hasn't seen them in the most of garden soil, in a very short time over-run with all manner of weeds, and perhaps fine tomatoes lying around on the ground and unharmed so they were ruined, but with them tied to stakes you can keep an earth mulch in dry weather and keep them thrifty and bearing right along. Or, if you prefer, when they become full of fruit just cover all the ground between the vines with straw, leaves or something for a mulch and they will be all O. K. the rest of the season. I believe pruning to a single vine and tying to a stake much the better way for garden culture.—C. S. Looney, in Southern Fruit Grower.

The Home Garden.

The suckers of gooseberries, currants and red raspberries should be rigidly pulled.

Most flower seeds can be sown during May, and greenhouse and window plants may be put into the open ground.

In making the home garden do not overlook garlic, chives, shallots, herbs, etc., as they are exceedingly desirable for flavoring purposes.

This season's growth of raspberry canes should be pinched off and they will throw out fruit-laterals. This is important, for it depends next season's crop of berries.

Early varieties of dwarf peas can be grown between the rows of tomato plants. By the time the tomatoes are large enough to occupy the ground the peas will be out of the way. The pea vines may be removed or left as a mulch for the tomatoes.

The seeds of sweet corn and all the wrinkled varieties of peas should be sown and a little later, cucumbers, melons, squashes, pumpkins and gourds may be put in the open ground. A fork full of well-rotted manure in the hill is the proper food for these plants.

The plants from pansy seed sown in window boxes or under glass in February and March may be set out and made ready for blossoming later. Seed sown now in rich soil will make plants that will come into bloom in mid-summer and keep it up, if given plenty of water.

For the main crop of tomatoes small, stocky, quickly grown plants are best for transplanting in a garden or field, but for extra early, potted plants that are almost ready to bud may be used. These should be transplanted without removing much of the earth from the roots. By this method it is possible to have ripe tomatoes by July 1.

Successional plantings of corn and peas should be made at intervals of ten days or two weeks. Some plant early and late kinds on the same day and thus secure a succession, but it is the more common practice to make a series of plantings of the same variety.

Needed the Money.
A Glasgow minister, who was in need of funds, thus conveyed his intentions to his congregation: "Weel, friends, the kirk is urgently in need of siller, and as we have failed to get money honestly, we will have to see what a fair can do for us."

WHY EYESIGHT FAILS

INFERIOR ARTIFICIAL LIGHT FREQUENTLY THE CAUSE!

Defendants of the Past, One and All, Have serious Defects—Acetylene Gas, With Its Clear, Unwavering, Yet Soft Flame Cannot Hurt the Eyes.

New York, June 20.—No one can go into our schools or meet a group of children on the street without noticing how large a number of them wear spectacles. The proportion seems to increase yearly, and there are many more who ought to wear glasses. The experience of one teacher might be duplicated by the score. She knew Alice was inattentive and she thought she was unusually stupid. She said so to the principal and sent a note to the mother, requesting that the child be helped at home if she wished her to keep up with her class. One day after a blackboard explanation, the teacher called upon the child and found that she had not seen what had been written. She was kept after school and by dint of much sympathetic questioning Miss C. found that Alice had never been able to see what was put on the board and that her head had ached so often and so hard that she frequently failed to hear what was said.

Such a condition may be caused by lack of proper food, but in our American homes it is usually due to the poor quality of the artificial light. The yellow, insufficient light of the ordinary kerosene lamp, with its smoky chimney, is about as bad for the eyes as can be imagined. The flickering light from a coal gas jet is but little better, and even the electric light, brilliant as it usually is, has an unsteadiness due to variations in power, and a glare peculiarly trying to the delicate nerves of sight. The comparatively new illuminant acetylene gas produces as nearly perfect an artificial light as has yet been found. It gives a clear white, unwavering light, very brilliant, yet perfectly soft, and so nearly like the rays of the sun that even colors appear as in daylight.

Fortunately, acetylene is very easily and cheaply produced, and the simple apparatus necessary can be purchased and installed in the home at a very moderate cost, and the acetylene can be piped to convenient points in the house where a light is needed. It is then lighted and extinguished and used exactly like common city gas.

Acetylene is rapidly coming into common use in homes, churches, schools and institutions of all kinds, and it is reasonable to expect that as its use in the home increases, there will be fewer defective eyes, particularly among children. Poor eyesight and the many ills resulting therefrom will undoubtedly be much reduced by the use of this new illuminant.

Shocked by Parrot's Profanity.

The residents in the vicinity of fashionable Avenue A and Fourteenth street here will take steps to capture a "cussing" parrot that for several days has inhabited a tall tree near the house of Charles E. Annett, says a dispatch from Bayonne, N. J.

Mr. Annett was greeted yesterday with "Hello, uncle! Hello, uncle!" Thinking one of his nephews was up the tree, he cried back, "Better come down before you fall," and the parrot answered, "Go soak your head, you blankety blank, blank!"

This angered Mr. Annett and he decided to chase the boy from the tree. When he found that he had been fooled by a parrot he said things. During the day a policeman and a score of boys tried to capture the bird, but she flew to the topmost branches. There she was still "cussing" to-night.

Hadn't Noticed Bird's Absence.

A curious incident happened in England recently during a wedding. The vicar, supposing the party to be complete, began the service, quite unconscious of the fact that the bride had not arrived. Instead of stopping him the bridegroom, best man and others remained silent from sheer nervousness and presently, when the bride and her father, who had been delayed, hurriedly entered. The father quickly apologized by saying: "Excuse me for interrupting; some mistake has been made." Explanations followed and the service was begun again.

FOOD IN SERMONS.

Feed the Domestic Right and the Sermons Are Brilliant.

A conscientious, hard-working and eminently successful theologian writes: "I am glad to hear testimony to the pleasure and increased measure of efficiency and health that have come to me from adopting Grape-Nuts food as one of my articles of diet."

"For several years I was much distressed during the early part of each day by indigestion. My breakfast, usually consisting of oatmeal, milk and eggs, seemed to turn sour and failed to digest. After dinner the headache and other symptoms following the breakfast would wear away, only to return, however, next morning."

"Having heard of Grape-Nuts food, I finally concluded to give it a fair trial. I quit the use of oatmeal and eggs, and made my breakfasts of Grape-Nuts, cream, toast and Postum. The result was surprising in improved health and total absence of the distress that had for so long a time, followed the morning meal. My digestion became once more satisfactory, the headaches ceased, and the old feeling of energy returned. Since that time, four years ago, I have always had Grape-Nuts food on my breakfast table."

"I was delighted to find also, that whereas before I began to use Grape-Nuts food I was quite nervous and became easily wearied in the work of preparing sermons and in study, a marked improvement in this respect resulted from the change in my diet. I am convinced that Grape-Nuts food produced this result and helped me to a sturdy condition of mental and physical strength."

"I have known several persons who were formerly troubled as I was, and who have been helped as I have been, by the use of Grape-Nuts food, on my recommendation, among whom may be mentioned the Rev. —, now a missionary for China."

"There is a reason." Name given by Postum Company, Battle Creek, Mich. "There is a reason." Read the little book, "The Road to Wellville," in each pkg.

Dick Your Premium.

Your Choice of 56 Valuable Articles

Is offered for the freight-car coupons on Good Luck Baking Powder can labels. Besides beautiful pieces of jewelry, the list includes attractive articles of wearing apparel and handsome things for the house. Five of the premiums are illustrated above. For full description and pictures of the whole list see the Little Good Luck Premium Book in each can. The positive purity, the perfect wholesomeness of

GOOD LUCK Baking Powder

make it the most widely chosen of all leavening agents. During this year 16,145,114 pounds have been sold (many orders coming in for carload shipments), which is the largest business for a single factory in the world. This is only the inevitable result of the original Good Luck plan—to furnish the best baking powder in the world at the lowest price—to cents a pound.

Good Luck is the best because it is purest, because it produces the lightest, whitest, sweetest of baking. These results are due to its unequalled leavening force, to the fact that it contains no adulteration whatever. It is the most economical because it takes less to do the work than any other baking powder. If your dealer doesn't sell Good Luck let us know, and we'll see that you are supplied at once.

The present fashion of shoes was introduced into England in 1633.

Asparagus and Radishes in Same Row. Asparagus is one of the best vegetables for the amateur's home garden. It is perfectly hardy, never fails to produce a crop, is one of the very first vegetables ready for spring and yields until June.

It grows on any ordinary garden soil, but is surprisingly improved by high cultivation and heavy dressings of rich manure. It is a seed of slow germination, so it is well to plant radish seed in the same row—they will mark the row so that weeding can be done, break the surface of the soil to prevent baking, and give you a crop of radishes as a sort of extra dividend.—Garden Magazine.

Nervous Women

Their Sufferings Are Usually Due to Uterine Disorders Perhaps Unsuspected

A MEDICINE THAT CURES

Can we dispute the well-known fact that American women are nervous? How often do we hear the expression, "I am so nervous. It seems as if I should fly!" or, "Don't speak to me." Little things annoy you and make you irritable; you can't sleep, you are unable to quietly and calmly perform your daily tasks or care for your children.

The relation of the nerves and generative organs in women is so close that one-tenth of the nervous prostration, nervous debility, the blues, sleeplessness and nervous irritability arise from some derangement of the organism which makes her a woman. Fits of depression or restlessness and irritability. Spirits easily affected, so that one minute she laughs, the next minute weeps. Pain in the ovaries and between the shoulders. Loss of voice; nervous dyspepsia. A tendency to cry at the least provocation. All this points to nervous prostration.

Nothing will relieve this distressing condition and prevent months of prostration and suffering so surely as Lydia E. Pinkham's Vegetable Compound.

Mrs. M. E. Shotwell, of 103 Flatbush Avenue, Brooklyn, N. Y., writes:

"I cannot express the wonderful relief I have experienced by taking Lydia E. Pinkham's Vegetable Compound. I suffered for a long time with nervous prostration, headache, loss of appetite. I could not sleep and would walk the floor almost every night."

"I had three doctors and got no better, and life was a burden. I was advised to try Lydia E. Pinkham's Vegetable Compound, and it has worked wonders for me."

"I am a weak woman, my nervousness is all gone and my friends say I look ten years younger."

Will not the volumes of letters from women made strong by Lydia E. Pinkham's Vegetable Compound convince all women of its virtues? Surely you cannot wish to remain sick and weak and discouraged, exhausted each day, when you can be as easily cured as other women.

Dropsey's New Discovery, for Cough, Sore Throat, Hoarseness, etc. Best Cough Syrup, Cures Croup, Whooping Cough, etc. Price, Dr. S. B. GLENN'S CO., Box 2, Atlanta, Ga.

The Secret of Good Coffee

Even the best housekeepers cannot make a good cup of coffee without good material. Dirty, adulterated and queerly blended coffee such as unscrupulous dealers shovel over their counters won't do. But take the pure, clean, natural flavored

LION COFFEE, the leader of all package coffees—the coffee that for over a quarter of a century has been daily welcomed in millions of homes—and you will make a drink fit for a king in this way:

HOW TO MAKE GOOD COFFEE.

The LION COFFEE, because it gets best results you must use the best coffee. Grind your LION COFFEE rather fine. Use 1/4 tablespoonful to each cup, and add white of an egg (if egg is to be used as a settler), then follow one of the following: 1. **WITH BOILING WATER.** Add boiling water, and let it boil THREE MINUTES ONLY. Add a little cold water and set aside five minutes to settle. Serve promptly. 2. **WITH COLD WATER.** Add your cold water to the paste and bring it to a boil. Then set aside, add a little cold water, and in five minutes it's ready to serve.

3. **Don't boil it too long.** Don't let it stand more than ten minutes before serving. DONT! Don't use water that has been boiled before.

TWO WAYS TO SETTLE COFFEE. 1st. With Eggs. Use part of the white of an egg, mixing it with the ground LION COFFEE before boiling. 2d. With Cold Water instead of eggs. After boiling add a dash of cold water, and set aside for eight or ten minutes, then serve through a strainer.

Insist on getting a package of genuine LION COFFEE, prepare it according to this recipe and you will only use LION COFFEE in future. (Sold only in 1 lb. sealed packages.)

(Save these Lion-heads for valuable premiums.)
