There is going to be a great deal of late corn this season. The crop is practically out of the hands of growers, and about all we can do is to hope for a good ripening season; Thousands of acres of this late corn will be cut up for fodder. If the crop will mature enough to well dent the kernels, and if one has plenty of stock, this no is the best way to handle late fields.-Indiana Farmer.

White and Brown Eggs.

Some markets demand eggs with white shells, and others want brown, That is a question best answered by the word "because." white-egg breeds are Leghorns, Anconas, Minorcas, Andalusians, Span-ish, Polish, Hamburgs, Redcaps, Houdans and games. Those laying brown eggs are Plymouth Rocks, Wyandottes, Rhode Island Reds, Javas, Dominiques, Brahmas, Cochins, Langshans, Dorkings, Indian games and

The Male.

Do not be surprised at a price of The value added to a flock of hens by the introduction of a purebred male is nearly a hundred per mongrel is thus crowded out, and the flock becomes more uniform. The new blood gives vigor, and a larger proportion of the chicks will be Farmer. reared to render service next year, and they will produce more eggs and meat proportionately than the present flock. There is nothing in which a farmer can more profitably invest few dollars than in pure-bred

Wrong Way of Planting Fruit Trees,

Two years ago I passed a neighbor's farm when he was having a lot of fruit trees set out. The man setting them would dig a hole about eight inches across and same depth, then he would huddle the roots of the tree together and crowd them into the hole all in a bunch, then pack the dirt around them. The lot was in grass when the trees were planted, and in grass it remained. A few days ago I passed the place again and at the trees. Most of them were dead, and the few that remained had grown but little. It is simply a waste of time and money to set trees and neglect them in this manner .-Correspondence in the Practical

The Minorca Fowls,

The Minorcas are considered one of the best of the breeds as layers. There are two colors-black and to increase the amount of stock. white-dividing them into Black Along with this is to be considered Minorcas and White Minorcas. The blacks are of a glossy green black color, as lustrous as possible, being similar to the Black Spanish in shape and size, but possessing a red face, The Whites differ from the Blacks only in color.

ers, and are a valuable acquisition to both for pasture and hay is of great the list of breeds. They lay yery importance. Clover and timothy large eggs, are non-sitters, and are mixed, are fine for both grazing and very hardy, considering the fact that they have large single combs. These are also rose-comb varieties, which blue grass pastures are very fine. Itpossess no advantage over the singlecomb varieties.-Farm and Fireside.

Food Value of Corn.

In a report from the Geneva Station concerning the feeding value of corn at different stages of growth, it was found to be of but little value until nearing the wasting stage, and at its best when just glazed, while ten days previous to this date there was a deficiency of twenty per cent. in feeding value. Taking this as our basis, we can safely figure a loss of one-fifth of the corn crop in this country. Many fields planted for the silo are either planted too thick if it did ear. Consequently, under the above statement, we readily see enormous waste from this promiscuous planting of corn. And still we continue and wonder why our dairy returns are so unsatisfactory .- S. Gordon, in the American Cultivator.

How to Kill Slugs.

The so-called slugs that skeletonize pear trees and rose bushes during the but it pays even on a small scale. summer are all comparatively easy to

As the slugs devour the surface tissue of the leaves in each case, they may be killed by a thorough application of any of the arsenical poisons. such as Paris green, London purple, or arsenate of lead. Upon low plants, it is equally as well to mix the dry poisons in twenty times their own weight of common flour and then dust them upon the plants through

a cheesecloth sack held in the hand. In case of the fruits, especially cherries, where it is not safe to use the above poisons, white heliebore powder may be used instead. If applied as a spray, put three ounces of the powder in one gallon of water; as a dust, it may be used without dilution in a cheesecloth sack and a light application made. The best time to apply the heliebore is to-

The slugs can be removed from cherry, pear and plum trees by thor-oughly sifting fine road dust, or freshly slacked lime over the foliage in the middle of a warm day, when the slugs are upon the upper side of the

Begin in time, be thorough, and do not let the slugs destroy your trees or roses. - C. P. Gillette, in Indianapolis Farmer.

Modern Farm Methods.

The scarcity of labor on the farm during the busy season would be more keenly feit by farmors, in these times, if it were not for the many in-

genious labor saving machines at the service of agriculture.

One man now, through the aid of modern farm devices drawn or operated by horses, can do the same amount of work that years ago, required from two to ten men to accomplish in the same length of time.

Formerly having and harvest required many days of hard labor. Modern farm machinery has made these operations simpler, less arduous and of short duration, much to the satisfaction of the farmer, his wife, family and hired hands.

Farm methods have been completely revolutionized through science, discovery and invention in the last half More advance has been made in this important profession, all things considered, than in any other calling in that time. This is so because the field for development and improvement was broader and because it was one of the last of man's occupation to receive the reinvenating effect of scientific effort and systematic study.

As the years go by, more noticeable will be the advance along agricultural lines, besides intensive farmtwo or three dollars for a pure-bred | ing will be in order to supply the necessities of life to the great masses living in the cities. The farmers of our land are meeting the demands cent., says Farm and Fireside. The made upon them now for these necessities and through thrift and intelligence the greater demands of the future will also be met .- Indiana

Crop Rotation.

System in farming is the thing to be advised if the very best results are desired. This may be in the management of the crops grown, and also in the stock kept. It includes both stock and crops taken together, if the view point is how the farm can maintain all the stock that the land is capable of sustaining from the products of the farm. The best or most successful farmers, where grass and grain crops are the dependence for profit, are those who grow farm animals of all kinds in such number that all the hay, straw, fodder and grain are consumed upon the farm, if indeed, there is not more or less bought, and fed Stock farming, or the growing of

farm animals, presupposes that all waste from the farm is eliminated. That is to say, there is opportunity to use everything that can be produced for food. There is great economy in so doing. The amount of fertilizing material is also greatly increased and this properly used increases production. The more manure rightly handled, the more grain and grass, and this makes it possible the vast amount of fertiling materini drawn from the atmosphere. The land grows richer year by year, and the whole movement tends toward building up both stock and crops.

On a well regulated system of farming to use all the products as They are regarded as superior lay- food for stock, an abundance of grass, for making hay. If there is an abundance of ground, permanent is advisable to grow corn, rye and oats, in considerable quantities. Use all the manure that can be made, on the meadow lands. This will give a very large yield of hay, and forms a heavy sod for a corn crop. Break this kind of sod ground for corn each season, and follow the corn crop with small grain in autumn or with oats in the spring, and then sow down again in grass. This kind of rotation will insure increased fertility of soil even without applying manure. but the manure should be applied carefully also.

Systemize or classify the animals so as to grow cattle, horses, sheep and hogs, and make it a point not to dispose of any kind of animals until they are mature. Raise the calves, colts, lambs and pigs, by keeping an abundance of the best breeding stock upon the farm, and feed judiciously until they have arrived at the age and size that will insure a good money value. The larger the farm the more successful can systematic the leaves of the cherry, plum and stock and grain farming be made, in Indiana Farmer.

A Pirate's Strategy. In summer the principal food of the white-tailed sea eagle is salmon. In autumn, when the salmon have ascended to the lakes, the birds resort to the sea. They appear to have a special fondness for eider duck. Stationed near the water in a commanding position, with a background of cliff, the color of which assimilates with that of the eagle's plumage, he sits motioniess until a flock of ducks settles near him. After a time one or two dive in search of food, but not until all have gone under together does the eagle make a sign. He then glides swiftly to the spot and circles over it close to the water. With sharp eyes he can detect the birds before they reach the surface. At first he is not usually successful, for as soon as they become aware of the presence of the enemy they dive again instantly. But in time they are obliged to come up for air, and then one of them becomes an easy victim. -London Field.

Disraeli's Gibe. Disraeli said that our fine Loudon squares resembled "a large family of dull children, with Portland square and Portland place for their respect-able parents." Surely this is very unjust; it may be doubted if any city can show such a succession of stately gardens and noble trees - London Builders' Journal.

-Cartoon drawn by Davenport for the New York Evening Mail.

VAST RICHES IN THIS YEAR'S CROPS

Farmers Getting More Bollars For All They Have to Sell, and, Therefore, Arc In Better Condition Than Any Other Class of Consumers.

Washington, D. C. — Secretary of Agriculture Wilson, who has just returned from a trip extending to the Pacific Coast, can see nothing but a continuance of good times.

There is plenty of money. In fact, I have reason to believe that the West is loaning money to the East instead of the East to the West. And this is being done at good rates of interest. The people of the West are not worrying over Wall Street and its troubles. They scarcely know that such troubles exist, save as they read of them in the newspapers. The rest of the country is no longer dependent on Wall Street.

"Grain crops generally will be good, with the exception of oats. There will be a good corn crop, not a bumper crop, but a good one, if frosts do not come too early. Prices for farm products and for stocks are high and the farmers are making money." Farmers are getting more money

for their grains this year than in any former year, and the shortage of the yield in bushels is being made up by the advance in prices. A banker from South Dakota, who has been in that section for years, while in Chicago last week, made this statement: Banks in South Dakota have larger deposits than they have ever held, and farmers are getting more dollars for what they have to sell than in any year on record. Last year at this year on record. Last year at this fitty per cent. In that time. This time they sold their wheat at sixty to fitty per cent. In that time. This gain in seven years is almost equal to the total value of the farm proago, and there are lots of Of corn, we are not raising seen not only in the paying off of hundreds of millions of farm mortany more than needed for home use. Wheat is of fine quality, although yields are not heavy. This also applies to all other grains."

The above story represents the conthem feel easy. In fact, they are in better condition than are any other is quite safe to count that this section

class of consumers.

Pacific Coast, can see nothing out continuance of good times.

"The people of the West," he said, "are not fearful of a panic or of hard wheat last year may not be quite times. The West is prosperous, equalled, but it is also true that the average of reoutput will exceed the average of recent years, and at the same time the increase in the value of farm products is likely to far more than offset the decline in the aggregate yield.

decline in the aggregate vield.

There may be a decrease in wheat of possibly 75,000,000 bushels, but with the price more than twenty cents a bushel above the corresponding time last year there ought to be a net increase of \$75,000,000 to \$100,000 to the value of the wheat crop over that of 1906. With an increase in the price of corn and cotton, the falling off in these crops likewise. the falling off in these crops likewise doubtless will be offset by their higher values. Thus the farmers of the country are once more blessed with a vast income - an income so great as compared with five or six years ago that it is difficult to comprehend the magnitude of the gain. The value of farm products in different years has been as follows:

at twenty-two cents. Cats sold at therety-two cents last year, and are now bringing thirty-five cents. Barley that sold at thirty cents last year brings sixty-five cents. Live cattle sell for \$1 to \$1.25 per 100 | 1880, while at the present time the pounds more than last year, while hogs are selling at the same prices as a year are are are the same prices as the per capita of all engaged in agriculture is about \$600.

gages and in the building of better homes, but also in the heavy deposits in the country banks throughout the The above story represents the conditions in the West, despite the fact the agricultural regions of the countriat prosperity stories are being overworked. There has been a conservative recession in business in nearly in the deposits of farmers, and in every line, which has been beneficial, as things were going too fast. But there is a good, healthy business, which denotes sleady consumption of the deposits in country there is a good, healthy business, which denotes sleady consumption of lations of the agricultural classes, goods at satisfactory prices. A magoods at satisfactory prices. A majority of the people in the agricultuditions it is scarcely possible for the ral regions are in as good condition country again to sink into the depths as last year for the purchasing of of panicky times such as we have had goods, as the advance in prices makes in the past. So far as the South is concerned, it

Henry?

No Crime To Bet, Says A Judge.

Knowledge Is Power.

The entrance of young women, even young girls, into commercial and industrial life presupposes, or should presuppose, in the interest of self-protection, a more thorough knowledge of the ways of the world than was regarded as either necessary or proper for young girls of a generation in which women strictly homekeepers and makers, and men were the bread-winners, protectors and support-ers of the home. At a time, not yet entirely beyond the realm of memory, it was considered proper and in every way desirable to keep young women in ignorance of the wiles of the wicked and the snares of the tempter, and, as far as possible, from all knowledge of the exis-tence of the vices that "cling like serpents' eggs together" around what is called the social sin.

The fallacy of this reckening

when put to the test, is apparent to

all, even the least worldly-wise of

the present age. Ignorance of what in general terms is called the "ways of men"—ways which are scorned by honorable men in every walk of life—is the open door through which "Henry," said the young wife, who many a young girl has walked unhad taken up physical culture, "how wittingly to her downfail. All hall to Peruna."

Mr. H. J. Henneman, Cakland, Neb., purs writes: "I waited before writing to you about my suchness, catarrh of the atomach, which I had over a year ago.

"There were people who told me it would not stay cured, but I am sure that I am cured, for I do not feel any more ill effects, have a good appetite and am getting fat. So I am, and will say to all, I am cured sheriff for good.

"I thank you for your kindness.

"Persuna will be our house medicine hereafter."

Catarrh of the stomach is also known in common purhance as dyspepsia, gastritis and indigestion. No medicane will be of any permanent benefit except it removes the cutarrhal condition.

Gained Strength and Flesh.

Miss Julia Butler, R. R. 4, Appleton, Wiss, writes she had estarrb of the stom-ach, causing loss of sleep and appetite, with frequent severe pams after eating. She took Perina, her appetite returned, sue gained strength, flesh and perfect health

FADELESS

Why Men And Women Differ.

A great deal has been said of the original difference of capacity between men and women; as if women were more quick and men more ju dicious; as if women were more re markable for delicacy of association and men for stronger powers of at tention. All this, we confess, appears to us very fanciful. As long as boys and girls run about in the dirt and trundle hoops together they are both precisely alike. If you catch up one-half of these creatures and train them to a particular se of actions and opinions and the othhalf to a perfectly opposite set course their understanding will differ, as one or the other sort occupations has called this or that talent into action. There is surely no occasion to go into any deepe or more abstruse reasoning in order to explain so very simple a phenome non,-Sydney Smith.

Origin Of Sleep. Dr. Salmon studies in Revue de Medecine the relations existing between sleep and the function of the pituitary gland. He believes the cause of sleep to be an internal physiological secretion. The bypophysis (pituitary body) is assum ed to play an essential part in the production of sleep. Since the substance of this gland is said to contain bromin, this serves to support the Theory that the production of sleep.
