They sing to me:

Mine the blasful dream,
Builded of delight,
Let the gipey's day be long,
And brief his night!
nk Dempster Sherman, in Munsey's
agazine.

A LONG, QUIET DAY IN THE COUNTRY.

0 comm 0 0 comm It was Betty Coman's idea-a long. quiet day in the country. It did sound nice, but it turned out to be the longest day I ever remember.

Betty invited seven of us girls to go on an early morning train to Brookton. From there we were to drive eight miles to Linden Falls. She said Arthur Knight had promised to bring some of the men in our crowd out in his automobile in time for an early supper.

There was a wagonette waiting for into it and it was nearly lunch time when we got to the falls. We were all hungry, but Betty said we must save the best things for supper, when the men would be with us. So we had only a little snack of plain bread and butter and spring water. After that we thought we'd take a nap and we lay down in the shade, but the mosquitoes were so plentiful that sleep was out of the question.

Because we wanted something to do we decided to arrange the supper We spread a beautiful white cloth that Betty brought and laid out all the sandwiches, salad, oggs, sardines, cake and cookies with heaps of pickles and jelly. Then we made wreaths of maple leaves which we wove. The lunch looked so inviting went for a walk, leaving our driver trail.

We strolled beside the brook into a deep wood, where we found quantiadd the finishing touch to our decorain getting them we stayed longer hisse'f. Ye could jest see 'im a-doin' than was intended. Then, suddenly it. Between his beliers ye could hear realizing how late it was getting, we t'other hound dawg a-snorin' half a were afraid the automobile party had mild furder back. I was still hopearrived during our absence, and we ful. ran so fast that we were all hot and

Betty fell and turned her ankle. She is always turning her ankle. She did it at almost every dance we but I can't see why she should turn From Judge. ankle out in the country with only us girls around. Of course we had to stop running and help her. She leaned so heavily on me that I had to get one of the other girls to take

and walted, getting crosser and more tired avery mlaute. At eight o'clock we sent the driver to find some farm horses to take us to Brookton. It was after ten o'clock when we reached the station, and discovered that we had just missed a train. We had an hour to wait, and we were all so hungry, irritable and peevish that we couldn't speak without almost snapping off each others' heads.

Father met us at the train when we got in town. I had telegraphed him, and he and Betty's brother, who was there, too, got the crowd safely home.

morning and told me that the auto-mobile broke down fifteen miles from everywhere and that they had a really terrible time. He seemed to long for sympathy, but he didn't get any from

I hope Betty won't try to get up any more excursions.—Chicago News

Uncle Hez Makes 1 Clean Geraway

By STRICKLAND W. GILLILAN.

"Once," said Uncle Hes, our oldest vet, as he hitched up on his crutch and thoughtfully picked around over the box of crackers until he found one that wasn't chipped, "I made what some braggin' windbags 'round hyer would call a purty keen git-

"Spin it, Hez; spin it. Don't let it ferment on yer mind. 'Tain't rone too strong, as 'tis," put in Oscar Hamebuckle as he shaved off a quar-ter-inch slice of cheese.

"I was in Andersonville prison, time o' th' war, an' I was wantin' turrible bad t' git out. The meals wasn't what I'd be'n ust to t' home, an' some other things about th' place us at Brookton and we girls climbed hed got us fellers some disgruntled with th' management. I would of left a heap sooner, only them bloodhound dawgs was so allfired keen on th' scent that mighty few o' th' hove that started ever got more'n a mile or two before they was ketched.

"Once, though, I was hangin round th' drug-store o' th' prison, when th' feller in charge steps out, leavin' me standin' clost by th' door unbeknownst t' him. A idee come to me like a shot. I hustled inside an' grabbed a big half-gallon bottle o' chloroform an' got plumb complete away with it afore he returned back.

"That night I fills m' boots full o the stuff an' sneaks through a hole I' dug 'n under th' stockade. Away I went, lickety-split, an' 'twasn't we could hardly resist it. For fear more 'n ten minutes afore I hears we might be tempted to nibble, we them hound dawgs a-bawlin' on the

"I hurried on, hopin' my roose might work, an' purty soon they wasn't but one hound dawg a-bawlin ties of ferns that we thought would on th' trail, an' he was stoppin' right in the midst of 'is loudest and survitions, and we became so interested grussest beliers t' gape an' stretch

"Finally th' other hound dawg laid down an' jined in th' snorin', an' I knowed I was saved. I tuck off m' boots, emptied the rest o' th' chloroform out o' my boots, worked over wont to last winter. I can understand my feet till I got 'em t' set up an' that, for the men used to flock around take notices, an' by mornin' I wos her and offer to carry her of tear up out o' reach—hey, Oscar? What's their handkerchiefs for bandages, that you're puttin' through ye?"—

An Old "Ad."

"Nothing succeeds like perseverance," said Mark Twain at a dinner. "When the luck seems most against Maybe we weren't surprised when us, then we should work and hope and hardest of all. In moments of disfound the horses, which had been couragement let us remember my old taken out of the wagonette and tied friend, Henry Plumley, of Virginia

A Story of Fires. Figures collected by the Internaional Society of State and Municipal them off the tablecloth and now they were nowhere in sight. The driver began calling and whistling and tearing around in every direction, and we girls, all except Betty, joined in the search.

"West" the same was instead of the building Commissioners and Inspectors show that every week, on an average, fires in the United States burn up three theatres, three public halls, twelve churches, ten schools, two hospitals, two asylums, two "colleges," six apartment houses, three department stores, two jalls, twenty-six hotels—the fires at seashers redepartment stores, two jails, twentyilly dollars to doughouts they have
piked out for home. I seen their
tracks on the road and it's no use
hunting any more."

We looked despairingly at each
other for a moment and then Betty
remarked that Arthur would just
have to take us to the station in his
sutomobile—that we could all plie in
somehow. That thought cheered us
and I looked at my watch to see if
it wasn't time for the men to come."

"Why, it's after six!" I exclatmed.
"They ought to have been here long
ago."

"Thay must come soon," said Betty.
But they didn't come. We waited

department stores, two jails, twentysix hotois—the fires at seashors resorts this summer will raise the hotel
average—140 "flat" houses, and
1609 single dwelling houses. Moreover, many of the buildings destroyed
would have been torn down if they
had not burned. A countryman who
suffered from a slight fire said he had
lost two houses and three barns, if
you consted the Joshouses, the chicken-house and the cowched. In such
lists as the foregoing a house is a
louse, be it ever so worthlens, and
a "college" may call itself so even if
it occurries but three rooms, and does
most of its basiness by mail.—

oll a day. mons for increased acreage are that new and improved machinery and implements for distillation and cultivation have come into use, so that crops may be handled more easily and speedily. Then the growers have been educating themselves as to the different new uses to which mint oil is put. They are banking on the fact that the Michigan oil is the finest that can be produced,

which comes from the new patches.

Until last year mint was planted in the spring, but recently a young mint adopted and is now carrying out a new plan. She plants in the fall. Her farm is well protected by Lake Michigan. She argues that it is in October than in March. Of course, she runs the risk of the plant being frozen, but up to this time she has profited by fall planting. It must be understood that only a little planting is done each year, for the old plants continue to produce annually, but the production of oil is less with each ensuing year, so that finally its pro-As the old patches give out new ones are planted.

The land on which mint is grown is black. It is prepared for mint just as ground for a potato patch is prepared. A hand passes along in the furrow carrying over his shoulder a sack in which are the long stalks of mint plant. These are dropped one at a time lengthwise in 'the furrow, the ends overlapping, so that there is a continuous row of plants from one end of the furrow to the other. The of a plow, but a good many growers cover the plants with their feet tramp them down in the soft black loam and cover them as they pass along. The shoots on the stem are about two inches from each other, and in due course of time these shoots take hold in the ground and begin to send up spears. In the fall-planted mint the plants lie dormant through the winter. In early spring the shoots begin to show, closely resembling wa-tercress. At first it grows slow, but after the middle of June the progress

Here is a very interesting feature of mint farming. Animals, horses, cows, sheep and cattle generally eat this mint straw. Up to this time it is not known exactly what value attaches to this material as food for animals, further than it is consumed ravenously. Mr. Kelley, who has charge of the Warner farm at Three Oaks, where four hundred out of two thousand acres of reclaimed land are in mint, says that he has been accustomed to haul some of the charges and that there must be an increased just as they are drawn from the vat, demand and that prices finally will and to spread the material in the barnyard. He said he did this to keep The weather for this year's crop of animals out of the mud, but he soon mint was not good. It was too wet, noticed that the horses and other and an immense amount of labor was animals left timothy to eat up the required to keep the weeds out of mint straw as long as they could find the new patches. It was simply im- a spear. On this farm the charges possible to weed out the old patches, are now being dumped in great wind-and to-day the weeds go into the vats rows alongside the drainage canal, along with the mint, except that on both sides. It is proposed to col lect stock along the banks and allow them to feed there during the winter months. It is not expected that they woman grower who had forty acres in | will eat all of it, but much will be consumed.

The aim is to get all the way from thirty to forty pounds of oil from an acre of mint. Only the new mint much easier to smooth over the land produces the larger quantity. Mint distilling is handled at various speeds, Twenty vats a day is considered a good day's work, It has occurred that one vat will fill a forty-pound demijohn with oil, but then all charges do not make such a showing. It cannot produce at that rate when there is a large quantity of weeds among the vats. It is claimed that only rag duction is too low to allow it to stand. and smart weed are injurious to the oil. The product obtained from these farm stills is the crude or natural

Since mint farming has assumed such extensive proportions in Berrien County more than one kind has been grown. Some of the farmers are producing spearmint. This is largely used as a flavoring agent in cookery, having a pleasant aromatic odor. Tansy also is being grown and distilled, the oil being used as a flavoring agent.

The help question largely enters into the mint-raising industry. Forty acres of mint requires a force of from seven to fifteen men, who are paid \$1.50 a day and their board. Weeding requires an immense amount of work, and the largest force is required when the new patches demand this kind of attention. In some of the larger stills it requires a force of from five to seven men to run the still alone. The work of harvesting and distilling begins in the latter part of August and lasts until frost stops he work. - New York Tribune

the work.— New York Tribune is rapid. The new mint has to be hoed and weeded once a week. It blooms in August and September. The first year it is out with a scythe. A man yoes up one side of a row and back on the other. After the second year, the furrows are so levelled down that the cutter of an ordinary mowing machine is able to get hold of the stems, and from that one the outting is done by the machine. After being cut it lies about twenty-four hours, until the plant has wilted but not dried. A field of out mint olderly resombles one of clover. A side delivery horse rake is used to rack him."—New Orleans Picayune. "Jest Tooted an' Trek Him."
In a Tennessee court an old colored woman was put on the witness stand to tell what she knew about the annihilation of a hog by a railway locomotive. Being sworn, she was asked if she had seen the train kill the hog in question. "Yessah, I seed it."
"Then," said counsel, "toil the court in as few words as possible just how all occurrerd." "Yo' honah," respond. "COME BACK--FIRE'S OUT!"

Bee to Aid Japan.

A tiny American bee is about to be charged with a task beyond the power of man to accomplish -- a task which means nothing less than changing the agricultural status of a nation. If successful-and results already indicate favorable progress of the experiment-it will mean wealth and prosperity for hundreds of farmers in Japan. Instead of trying unsuccessfully to raise fruits, such as applea and pears, the soil-tillers of "Land of the Cherry Blossom" will yield in abundance, and the natives will rejoice in luscious fruits and delicious vegetables which, because of the lethargy of their native bee and its failure to carry pollen, it has been

impossible for them to raise. The bee to which this task is assigned is the golden bee. It is raised in America and was produced by an American, and already many little queen golden bees have been sent to Japan to begin their task.

The native Japanese bee is an in dolent thing and does little more than crawl about to meet the needs of its day. Because of its apathy it has been impossible to cultivate such fruits as apples and pears and such vegetables as cucumbers, tomatoes and melons. The male and female blossoms of the beliflower varieties of fruits and vegetables are usually so far apart that it is necessary for some agent of nature to carry the pollen. In many other countries the busy little bee, in its search for Justices General Sessions — Edward honey, is the means of fructification. wann, James T. Malone, Joseph F. Mulwork .- Harper's Weekly

Coffee Substitute Culture. A syndicate of Stockton capitalists has purchased a 500-acre tract of very rich land on Robert's Island, one of the numerous fertile river islands west of Stockton, and expects soon to

commence the cultivation of "coffee." They are going to put this large tract into "blackeye beans," which are used extensively in the manufacture of the cheaper grades of coffee. The bean takes a nice brown color, has a good flavor, and cannot be detected from the genuine coffee bean -the imported article-except by an experienced expert; and even such a person would find it difficult to detect the counterfeit in a ground mixture

of the real article. The blackeye bean owing to the demand for it in the manufacture of coffee sells readily for five cents per pound; much cheaper than real coffee can be nurchased for. The blackeye bean is not at all injurious, as has been determined by repeated experimenting and chemical tests; but, on the contrary, it makes a very nutritious drink when mixed with real coffee, as is always the case, and the flavor is delicious. In fact, about the only thing against the blackeye bean is, that it is not coffee, and no enthustastic coffee drinker would knowingly drink any substitute. . This is the first attempt to cultivate the blackeye bean in California.—Scientific Amerlean.

A Lobster Monstrosity.

Charles A. Chase, of Bath, captured a freak in the lobster line on Monday afternoon, while flabing ten miles cast of Seguin. He hauled in a lobster which measured thirty-two inches and weighed thirteen pounds. The shell was covered with barnacles and was judged by old fishermen to be at least ten yeurs old. It was the argest lobster caught in that vicis for many years .- Kennebec Journal.

Lusitania Atque Mauretania.

Lucitania was a Roman province that at one time embraced the greater part of what is now Portugal and ex-tended over into Spain. The Lusi-tania's sister ship, the Maurotania, Berives her name from the ancient designation of Borthwestern Africa. —Meridan Joygnal.

The Female Whippoorwill.
