For Peach Tree Borers.

There is no more serious pest of the peach tree in Pennsylvania than the Peach Tree Borer. It is the larva of a Clear-wing moth which flies by day, darting quickly from place to place. The egg is laid during July and August on the bark at the base of the tree, and after some days the larvae or grub hatches and commences to feed at the surface of the bark, finally eating its way through and boring up and down and across beneath the bark, often cutting off the total sap supply, and causing the tree to wither as though scalded. After the pests have passed beneath the bark, they are concealed and can not easily be reached with insecticides. They should then be killed by cutting them out, always cutting lengthwise rather than crosswise of the bark, or by piercing them with a pointed wire, when they will die. This, however, is a great loss of time, and is, of course, after some injury has been done to the tree. By far the best plan is to prevent this injury and the necessity of cutting them out by covering the base of the trunk of the tree with some liquid material that will prevent the moth from laying its eggs, or destroy the larvae before they enter the bark. The best time of year for this is the latter part of June, when the base of each tree should be sprayed with boiled lime-sulfur wash, either commercial or home-boiled, the same as for San Jose scale, applying to each tree from a pint to three pints, according to size. The best way to do this is with a spray pump, with a short extension rod, carrying the nozzles at an angle, but where there are only a few trees it can be applied with a whitewash brush. Painting near the ground and below with whitelead and raw linseed oil will serve the same purpose, and be safe, as has been proven by Prof. H. A. Surface in his experiments.

J. L. Shroy, of Lancaster Co., writes to Prof. Surface that he has succeeded perfectly in preventing the borer by rubbing the base of the tree with equal parts flowers of sulfur and salt, in June and again in August.

Chas. R. Steach, Successor to Steach & Thompson. Painter and Paper Hanger.

Is She Working Herself to Death

Does your wife complain of too much dairy work? Do you ever hear her say she'll never get through washing milk things? How often does she say, "Oh, if I only had fewer pans, crocks and cans to wash, I could read, write or sew more, or even take a little rest each day."

AN EASIER TIME.

Ask her about it. Arrange to make the dairy work one half easier, one half neater, one half more pleasant, and 25 to 150 per cent. more profitable by using a Sharples Tubular Cream Separator. Until you try the Tubular, you can't imagine the difference it makes. It skims the milk immediately after milking—there's no milk standing around—no cans or pans to wash. The Tubular is entirely different from all others, so much more simple and convenient. Bring your wife and let me take a Tubular apart for you.
