Guessing Distances.

Almost every one knows that the head of an ordinary horse is as long as a barrel, but not many persons would have thought it so without measuring. When you Fairview Sunday school. The have a rainy day or a dull evening try a distance guessing contest. Let each player have pencil and that found anywhere else. Use paper and write down the list of things to be measured. All have a good collection for the size of a voice in making up the lists. Some one suggests height of the ercises have been held Sunday table. Each then writes "height torenoon as had been planned, of table" and puts opposite his the church would not have held guess of the height in feet and the people. The rain was sent inches. In the same way other on Sunday, and when it is sent, objects are selected and the distances guessed-width of doo Misses Day Foreman and Elsie dimensions of room, length and Baumgardner, of Wells Tannery, height of mantelpiece, distance spent Sunday with the family of around a circular stand, distance tentedly. around Claire's neck or Jack's Quite a number of our people head, dimensions of books and boxes, height of chairs, pictures plains. "Something went right. Sprigand vases.

Finally the papers are signed Hustontown, spent a few days and exchanged, and some one lect. with tape line or rule measures the various distances. The best sloped with Hennett!" guess for each object is marked Some of our farmers who have by a cross, the poorest by a ciph-

TAUGHT TO BE HONEST.

Ranse Revealed the Method Used to Reform Him.

A few years ago there was a shiftess colored boy named Ransom Blake, who, after being caught in a number of petty delinquencies, was at last sentenced to a short term in the penitentiary, where he was sent to learn a trade. On the day of his return home he met a friendly white acquaintance, who asked: "Well, what did they put you at in

prison, Ranse?" "Dey started in to make an honest

boy out'n me, sah, "That's good, Ranse, and I hope they succeeded."

"Dey did, sah." "And how did they teach you to be honest?"

AND THIS WAS LOVE.

ing Acts.

A young man and a young woman lean over the front gate. They are lovers. It is moonlight. He is loth to leave, as the parting is the last. He is about to go away. She is reluctant to see him depart. They swing on the gate.

"I shall never forget you," he says, "and if death should claim me, my last thoughts will be of you."

"I'll be true to you," she sobs. "I'll never see anybody else or love them as long as I live!" They parted. Six years later he returns. His sweetheart of former years has married. They meet at a party. She has

changed greatly: between the dances the recognition takes place. "Let me see," she muses, with her fan beating a tattoo on her prefty hand, "was it you or your brother who was my old sweetheart?"

"Really, I don't know," he. says; "probably my father!"

Inconsolable.

The surges crashed mournfully in the darkness against the old pler. "This blow," he said, "is one from which, alas, I shall not recover. Nev ermore will I look upon the face of woman save in bitterness and sor-

BEE KEEPING The section of

THE SOLAR EXTRACTOR.

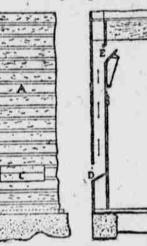

is Very Efficient to Render Up New Combs

The solar extractor is very efficient to render up combs, especially new combs, or cappings, into beeswax, as it is always at hand during the busiest season, but it is absolutely useless in purifying beeswax that has been rendered. When you put combs into the solar extractor those parts which contain the most beeswax will be the first to soften, and therefore the purest beeswax will run first. When the bulk of it has melted down the remaining liquid part comes also, with a portion of the dregs mixed into it. The cake is thus made to look darker at its centre, or the portion which

has last melted down. It would be little use to melt up this beeswax several times in succession in the solar extractor, for these dregs are very fine and are sure to stay with the wax. The only method to purify the wax further is to melt it with water, allowing it to cool as slowly as possible. It must be brought to about the boiling point of water, so that there will be perfect freedom for all the particles of dirt to settle, and as they are usually heavier than wax the dirty portion will be found to have settled to the lower edge of the cake, from whence it may be scraped without difficulty. Several successive meltings with the sun extractor would tend only to mix the dregs more thoroughly with the wax and render it so much more difficult to cleanse. The sun, however, has the faculty of bleaching the wax, and would thus render it of brighter color. But even in this there is an extreme to be

King System of Ventilation.

Details of the King system of ventilation are shown in the diagram, The outside of board wall is indicated by A and the opening for admission

of air is at C. On the right there is shown a cross section of wall with outside opening at D and inside opening at E. A valve is arranged at E to regulate the supply of fresh air.

Water for the Bees.

When brooding is heaviest bees require most water. In early spring they may be seen about the well in search of this necessary article, which goes to make up their daily bill of fare. They will fly a great distance for it, if not obtainable near by. Many bees are lost and chilled when thus carrying water for their brood. If there is no water accessible, close to the apiary, it will pay you to supply some. Take a barrel and set it a few feet from the ground, fill it with water and cover the top so no bees will be drowned. Then bore a very small hole near the bottom of the barrel and let the water drip on a board. The board should be slanted slightly to cause the water to flow slowly along. From this source the bees will be able to help themselves. The neares the water is to the apiary the fewer bees it will require as water carriers. a very important feature at this season when the warmth and energy of every bee are needed to the hive to help build up the colony. When honey begins to come in from the fields, it is no longer necessary to supply them with water, for they will get enough of it from the thin nectar which is daily brought into the hives.

Bee Notes.

Many little things can be done ahead of time to have bees in best shape for winter.

This has been a good season for

white comb honey. As soon as it is well cupped over take it off before the bees travel-stain it with their feet. If you wait for bees to swarm be fore putting on supers you may lose half a crop. When the first super is half filled, put another super under it. Always know what your bees are doing by going into the hives. - See that they have plenty of room and a good place to store the honey they gather.

Put supers on just before they will be wanted. If put on too early the bees gnaw holes in the foundation and if put on too late there is a loss of honey that would have been stored. In the middle of the super it is well to put a few bait sections filled with last year's comb. This induces the bees to begin storing early. By wise manipulation much more honey is ob-

THE EASIEST WAY.

The Best of Us May Be Wrong, Sc Don't Believe Conclusive Evidence.

Mr. Gilberry was strolling up and down the dusty road in the brolling sun, clad only in a short-kneed bathing suit. The native drew up before him curiously, looking him over carefully.

"Want a lift, mister?" "No, thank you."

"It's quite a way to the shade, pardner-better jump in!" 'No thanks '

"This sun'll peel you, stranger, if you don't get out of it!" "I hope so," crossing his arms complacently over his breast,

The native studied Mr. Gilberry for a moment. "If it aint' pryin' into your affairs too much, I'd like to know what you are paradin' around in this killin' sun dressed like that for?' "To save time," answered Mr. Gil-

berry, critically examining a red arm. The native regarded Mr. Gilberry profoundly, sadly shook his head, tapped his forehead significantly, and clucked to his horse. The sun had done it, of course. Which shows that the best of us

may be mistaken, and that conclusive evidence is only an empty phrase, for Mr. Gilberry could spare only two days to go to the seashore.

Tourist Bromidioms.

"How cold does it get here in the winter?" 2,133 times. What is the height of that moun-

tain?" 796 times. "How far away do you suppose that glacier is?" 921 times.

"Is this the Medicine Hat where weather comes from?" 1,142 "How far do you suppose it is over

to where that man is ploughing?" 1,231 times. "Are there any trout in that stream?" 4,621 times.

"Do the bears ever come down to the rallroad?" 944 times. Where do we change time again? 6,989 times. "Why is it that it doesn't get dark

here until nearly ten o'clock?" 3,108 "Has anybody ever climbed to the top of that mountain?" 2,246 times. "Are these the Rockies or the Sel-

kirks?" 9,712 times. "Wouldn't it be great if we could have one of these mountains set down on the prairie back of Chicago?" 562 times.—Chicago Record-Herald.

Where Ignorance is Bliss. When the United States fleet en tered Asiatic waters during the famous round-the-world voyage, a cruiser was sent ahead to a Chinese port upon of ficial business connected with the cruise. Upon arrival the ship's officers were invited to dine by a Chinese mandarin, and during the meal

one of the officers wished a second helping of a certain savory dish which he supposed was duck. Not knowing a word of Chinese, he therefore extended his empty plate, remarking with smiling approval: "Quack! quack! quack!"

But the officer's appetite failed him suddenly, as his host, with a twinkle of slant Celestial eyes, shook his head with the simple but horrifying re
