ADVERTISE IN The Fulton County News.

The Dairy Industry of the United States.

According to the last year book of the Department of Agriculture, there are 21,720,000 milch cows in the United States, and these are worth \$702,945,000.00.

There is no other branch of diversified agriculture so important to the progress of a community. The fertility of the soil can best be maintained by the liberal use of barnyard manure.

Dairying has made wonderful progress since the advent of the modern creamery and the consumer of butter has not only been benefited by being furnished a more wholesome and palatable article of food.

The perpetuity of the country's greatness depends upon increasing the production of farm products from year to year.

Our farmers are all done harvesting and are talking of threshing. The Children's Day services at Pleasant Grove were well attended.

The Christian Endeavor Society will meet Sunday evening July 17th. Let every worker of the society attend.

Small Flies Among Growing Oats.

Hean Hunt, of the School of Agriculture of the Pennsylvania State College, referred to State Zoologist H. A. Surface, Harrisburg, a letter which he received from a Bradford County farmer.

Prof. Surface gave the following information: "The small fly of which you write is an Aphis, or Plant Louse, which lives by sucking sap from the oats leaves.

There is really no powder nor dust that will destroy these Plant lice, and the only thing that I can recommend is spraying, which would be a very serious problem for oats.
