Arrangement of Stars on New Flag.

With the admission of the two last territories, Arizona and New Mexico, there are 48 States in the Union. When the United States was consolidated into a government there were 13 States which agreed to go into it "for a more perfect union."

Vermont was the first State admitted to the Union after it became a Union; that was in 1791. After that Kentucky came in in 1792; Tennessee in 1796.

That made the Union a body of 16 States when the new century started in 1800. Ohio came in in 1803, and was never formally "admitted" and proclaimed. Then came Louisiana in 1812, Indiana in 1816, Mississippi in 1817, Illinois in 1818, Alabama in 1819, Maine in 1820 and Missouri in 1821. That made a Union of 24 States. Arkansas was admitted in 1836, Michigan in 1837, Florida became a State in 1845, Texas in 1846, Wisconsin in 1848, California became a State in 1850, far from any other State though it was; Minnesota came in in 1859; Kansas came in bloody, in 1861; West Virginia was cut off Virginia in 1863, and Nevada was admitted in 1864. It was nine years before another State was admitted. Colorado became a State in 1876. Then after years the Dakotas were admitted with Montana and Washington in 1889. Only this once were so many States admitted in a group. Idaho and Wyoming came in 1890. Utah was admitted in 1907, and now in 1910 we have the last two territories admitted.

This final admission of territories makes it possible to arrange the stars on the national flag in symmetrical manner and that will mark the end of the growth of the Union. All of the States are in the Union and the United States is grown.
