TO MAKE CHANGE.

Banker Urges Necessity for the Coinage of a Two-and-a-Half Cent Piece.

The coinage of a 2½ cent piece is strongly advocated by William H. Short, a new banker, who declares that its use would mean a saving of \$39,000,000 yearly to consumers. The half cent enters into the price of many commodities that are sold by the pound, quart or yard, and whenever the purchase does not result in even money the half cent is added. This practise, it is estimated, adds at least \$2.50 per year in an ordinary family, to the price of articles for which no equivalent was rendered. Exact justice certainly demands such a provision, but there are many sections in this country in which cents are not in use the smallest coin used being a nickel, where evidently greater shaving is often done.

Letter to W. C. Patterson, McConnellsburg, Pa.

Dear Sir: Here's the gist of the paint question:

1st. Every job painted Devoe takes less gallons than of any other paint.

2nd. The paint that takes least gallons wears longest; always. We can't help it.

Yours truly

New Postoffice Rules.

Our postmaster formulates the following rules for the benefit of his patrons and that you may know what you may expect: No letters given out until they have been received. If you don't get a letter or a paper on the day you expect it have the postmaster look through all the boxes and down the cellar also. It ought to be there somewhere and he likes to hunt for it just to please you. If your friend don't write rave at the postmaster. He is to blame. If he tells you no, put on a grieved look and say there ought to be some. He is probably hiding your mail for the pleasure of having you call for it. Ask him to look again. If you are buying stamps make him lick them and put them on, that's his business.
