Burn Strawberry Leaves.

Now that the strawberry crop has been gathered is the proper time for mowing the leaves of the plants as low as possible with a scythe or mower, and letting them cure quickly, then raking them together within the rows and burning them. Straw should be added if necessary to make enough fuel to burn the leaves. This is the common method of the most practical strawberry growers in suppressing insect pests and plant diseases, and renewing the old strawberry rows or beds, which should also be properly cultivated and hoed. It is for this reason that State Zoologist H. A. Surface replied, from Harrisburg, to one of the instructors in the Pennsylvania School of Horticulture for Women, saying:

"The best method of getting rid of the leaf curler on strawberries is to mow the leaves now, which is just after the harvest, and burn them as soon as possible. Some persons throw a little straw between the vines, and mow the leaves, rake them on to the straw and burn them. This gets rid of both plant disease germs and insects, and I recommend it as proper. It is practiced by some of our best berry growers."
