The cool wet weather during May caused corn to rot in the ground in many places in the State, and some fields were replanted in June. June planting has been known to make good crops of corn when frost did not come early in the fall. There is one thing pretty sure about June planting; cut worms will not hurt it, as their work is over late in May.

How to Make Rose-Beads.

Any girl who cannot afford a strand of pretty beads can make some that are delightfully fragrant from her mother's rose garden. Gather five or six pints of rose petals, the fresher the roses the more fragrant will be the beads. Grind these petals seven times through a meat chopper, two times using the coarse plate and five times using the fine plate. After adding one-fourth ounce of tincture of iron, mold the mixture into the shape and size of small marbles by rolling between the fingers. Only a little practice will be required to make the beads quite perfect. When the beads have slightly hardened make a hole through each one with a hat pin or coarse needle. Set aside again until perfectly firm and hard. Dip a velvet cloth in vaseline and polish each bead. Then the beads may be strung with small gold or silver beads. These rose beads will keep their fragrance a long time. Other blossoms may be

used in place of the rose petals. Lilac or any of the very early blossoms may be used. The use of the tincture of iron blackens all the beads no matter which flower petals are used.

Shallow Cultivation.

When our lands were new and filled with fertility, we could raise corn on slatelands despite the way we tore up the ground and cut off the slender roots with the big shovel cultivators, and in a few instances, it could be accomplished yet, if there should happen to be enough rainfall to settle the earth back again to where it should be, namely, close to the roots. It is agreed by all who study their work that if the slateland seeded for corn has been well worked, no more severe tearing up of the soil should take place. Plenty of spike harrow teeth in the cultivator, just to keep crusts from forming and to rake off the weeds, is all the cultivation such naturally loose soil should receive—and that very shallow. To throw the soil into ridges is but to dry it out, cut off the very small roots that run out more than a yard in every direction, and retard the growth of the corn. Better sell the big shovels for old iron. Do not let crusts remain, they draw all the moisture from the soil.

KEEP THIS IN MIND

That when the time comes we are here to serve you—and we guarantee that both quality and price will be eminently satisfactory to you.

We did sell some sweet corn this season, and could have sold more, if we could have procured it; and we are sorry that we could not fill all the mail orders we got.

We made mention of these two articles in our last advertisement; and, up to this time we have sold 20 garden plows and 15 cadet mowers. Price of plow \$1.98; Mowers, \$2.50 and 2 65.

DEALER IN

High Grade Plain Pianos, Player Pianos, Organs, Victrolas, Records, and Professional Tuner, McConnellsburg,

Nothing adds more to the refinements of home than good music. To have good music you must have a good instrument. There are good bad and indifferent instruments, and to the unskilled eye they look much alike. The unprincipled dealer is likely to make you pay a first-class price for a fourth-class instrument. I have lived in this county since my birth, I am a taxpayer and in a position to make good any business transactions. Buy your piano, organ, or victrola from me and if it is not all right you can come back at me.

There are families in every part of this county that have purchased instruments from me. Ask them about me.

Perhaps you want to trade your organ for a Piano, or Player Piano; or your Plain Piano, for a Player. See me. Let's talk it over.
