A few days ago, while Mr. W. buggy from the rear and knocked a lot of spokes from a wheel. Congested traffic and a low bright sun caused confusion and the con Mrs. Stewart are residents of carloads. Trenton, N. J., and are spending at Green Hill.

## New Cemetery Fence.

The Presbyterians of Green on the church grounds on Tuesday and removed the old fence ture. Dinner was served to the workers on the ground. Pastor Rev. J. L. Yearick attended and assisted in the work. The congregation is to be congratulated ans sacrifice on the part of the Harbors, Minn. faithful remaining members.

Miss Ruth Cooper was entercounty friends last week.

#### McCONNELLSBURG TO THE FRONT.

#### Citizen "Civic" Would Take Advantage of Opportunity to Impress Travelers With Our Civilization.

The Lincoln Highway has helped to a great extent to put Mc-Connellsburg on the map. We live in the midst of one of the most beautiful mountain regions through which the Highway pass es. Tourists passing over the Tuscarora Summit cannot help but exclaim over the beautiful view from the top of the mountain. Naturally they would expect a clean up-to-date town that has the advantage of being surrounded by such environment.

How they are disappointed on entering our town to see almost every vacant spot marred by a growth of weeds and a place for debris to accumulate; buildings unpainted and unkept; streets and crossings in an unsightly con dition and alleys scarcely passable.

Have we no pride in our own home town, the town of which we should all be proud; can we at their home in Camden, N. J. not make it a beauty spot, one in on Monday, September 11, 1916, which every stranger will want

It is not enough to keep our don, Pa., on the following Wed- own properties in repair and prenesday. She is survived by her sentable but we should extend our domestic pride into civic pride and interest ourselves in our whole vicinity.

#### Open Sheds for Sheep.

Sheep sheds may combine effisylvania State College has demonstrated that sheep wintered in an open shed having a southern exposure, free from draughts and affording a dry bed, are in better physical condition than wintered in a warm, ill-ventilated barn basement. During the lambing season, of course warmer quarters are necessary. Ewes may then be removed to warmer quarters and later replaced in the shed. After lambs are three days old they will not suffer in the open sheds, even during zero weather.

The shed used to house experimental ewes and lambs at State College adjoins the south side of a hay shed. The sheep shed is 60 feet long and 30 feet wide and cost \$200. Its capacity is 100 mature sheep. It was built of hemlock lumber over a superstructure of oak posts. The roof and west end are covered with tar paper. An alley six feet wide runs the full length of the inner side of shed. The hay shed attached affords a place for storage of feed and lambing pens.

The shed is divided into seven pens for experimental purposes Three lots instead of seven can probably be more desirable under average farm conditions. Under such conditions, also, breeding sheep in winter quarters should be divided into groups with reference to age and condition. Breeding sheep should be separated from fattening sheep. An exercise yard thirty-two feet wide adjoins each pen. They should be well drained and dry.

## The Governor's Visit.

Next Tuesday afternoon, September 26th, between three and four o'clock, Governor Martin G. Brumbaugh accompanied by representatives of the Agricultural world to know that the ladies of ute talks at McConnellsburg and

Important Decision. An important decision handed roads in proper condition.
