### NOVEL CIPHER CODE KEYBOARD

S. T. Larye of Barcroft, Va., has invented an auxiliary keyboard for use on any standard typewriter which is capable of transcribing and translating any message in a manner which makes it impossible, he declares, for anyone other than the person or persons possessing the key to read. The keys of the invention merely operate the keys of the typewriter. An endless belt on which are all the letters of the alphabet, slides between these keys, which are arranged in two rows. The sender of the message begins by moving the tape so as to place a predetermined letter opposite a certain letter on the keyboard. He and his correspondent know which letters are to face each other at the start. Instead of following the keyboard in forming words, the sender follows the tape, striking the key which happens to be opposite the desired letter on the tape. After each letter is made the operator moves the tape a certain number of spaces to the right or left, according to prearrangement.
