The English consumption of wheat per year is 200,000,000 bushels. The annual production of wheat in England will average from 75,000,000 to 80,000,000 bushels. It is an ill wind that blows no one some good. The American farmers in the northwest have long suffered the hardships that follow a low price in wheat. Nearly all the margin of profit has been consumed in elevator and transportation charges. If the English wheat crop this year really sustains the estimates that have been made it will be a season of rejoicing for the American wheat grower.

The mischief of voracious novelreading is really much more like the mischief of dram-drinking than appears at first sight. So, too, the habit of exciting novel reading lead to fatty degeneration of the literary mind, i. e., to an unhealthy and spasmotic action of the imagination, and a general weakening of the power of entering thoroughly into the solid interests of real life. So far as we know, the only effective cure for this habit of literary dram-drinking—a cure not always forth coming-is a moral shock of some kind which exposes the hollowness of all these unreal interests, and makes them appear as artificial and melodramatic as they actually are.
