

\$1,000 REWARD
 To any one who will contribute to our cause that
Acme Blacking
 WILL NOT
 INJURE LEATHER.
 WOLFF & RANDOLPH.

To make an intelligent test of this, try the following method: Hang a strip of leather in a bottle of Acme Blacking, and leave it there for a day or so. Examine the leather carefully. We recommend ladies to make a similar test with French Dressing, any gentianine with any liquid solution of Paste Blacking, or with liquid blacking that comes in stone jugs.

Wolff's ACME Blacking
 Make any kind of leather
WATERPROOF, SOFT, AND DURABLE.
 Its beautiful, rich, GLOSSY POLISH is unequalled. Does labor and annoyance.
 A Polish lasts a Month for Women, and
 A Week for Men, and on Harness Leather even Four Months without reworking.
WOLFF & RANDOLPH, PHILADELPHIA.
 Sold by Shoe Stores, Grocers, and Dealers generally.

High-Pressure
 Living characterizes these modern days. The result is a fearful increase of Brain and Heart Diseases—General Debility, Insomnia, Paralysis, and Insanity. Chloral and Morphia augmented the evil. The medicine best adapted to do permanent good is Ayer's Sarsaparilla. It purifies, enriches, and vitalizes the blood, and thus strengthens every function and faculty of the body.

"I have used Ayer's Sarsaparilla in my family, for years. I have found it invaluable as

A Cure
 for Nervous Debility caused by an inactive liver and a low state of the blood."
 —Henry Bacon, Xenia, Ohio.

"For some time I have been troubled with heart disease. I never found anything to help me until I began using Ayer's Sarsaparilla. I have only used this medicine six months, but it has relieved me from my trouble, and enabled me to resume work." — J. P. Carzanetti, Perry, Ill.

"I have been a practicing physician for over half a century, and during that time I have never found so powerful and reliable an alternative and blood-purifier as Ayer's Sarsaparilla." — Dr. M. Maxstari, Louisville, Ky.

Ayer's Sarsaparilla,
 PREPARED BY
 Dr. J. C. Ayer & Co., Lowell, Mass.
 Price \$1; six bottles, \$5. Worth \$5 a bottle.

CARTER'S LITTLE LIVER PILLS.

CURE SICK HEADACHE

Sick Headache and relieve all the troubles incident to a bilious state of the system, such as Dizziness, Nausea, Drowsiness, Distress after eating, Pain in the Side, &c. While their most remarkable success has been shown in curing

SICK HEADACHE

Headache, yet CARTER'S LITTLE LIVER PILLS are equally valuable in Constipation, curing and preventing this annoying complaint, while they also correct all disorders of the stomach, stimulate the liver and regulate the bowels. Even if they only cure

ACHES

Ache they would be almost priceless to those who suffer from this distressing complaint; but fortunately their goodness does not end here, and those who once try them will find these little pills valuable in so many ways that they will not see how to do without them. But after all sick head

The Rattler's Bite.
 EXTRACTS FROM DOCTOR MITCHELL'S "CENTURY" ARTICLE ON THE VENOM OF THE SNAKE.

Soon as the rattlesnake, who means mischief, throws himself into a spiral, and about one-third of his length, carrying the head, rises from the coil and stands upright, the attitude is fine and warlike, and artists who attempt to portray it always fail. He does not pursue, he waits. Little animals he scorns unless he is hungry, so that the mouse or the toad he leaves for days unnoticed in his cage. Larger or noisier creatures alarm him. Then his head and neck are thrown far back, his mouth is opened very wide, the fang held firmly erect, and with an abrupt swiftness, for which his ordinary motions prepare one but little, he strikes once and is back on guard again, vigilant and brave. The blow is a stab, and is given by throwing the head forward, while the half-coils below it are straightened out to lengthen the neck and give power to the motions which drive the fangs into the opponent's flesh; as they enter the temporal muscle closes the lower jaw on the part struck, and thus forces the sharp fang deeper in. It is a thrust aided by a bite. At this moment the poison duct is opened by the relaxation of the muscle which surrounds it, and the same muscle which shuts the jaw squeezes the gland, and drives its venom through the duct and hollow fang into the bitten part.

In so complicated series of acts there is often failure. The tooth strikes on tough skin and doubles back or fails to enter, or the serpent misjudges distance and falls short and many squirt the venom four or five feet in the air, doing no harm. I had a curious experience of this kind in which a snake eight feet six inches long threw a teaspoonful or more of poison athwart my forehead. It missed my eyes by an inch or two. I have had many near escapes, but this was the grimmest of all. An inch lower would have cost me my sight and probably my life.

A snake will turn and strike from any posture, but the coil is the attitude always assumed when possible. The coil acts as an anchor, and enables the animal to shake its fangs loose from the wound. A snake can rarely strike beyond half his length. If both fangs enter, the hurt is doubly dangerous, because the dose venom is doubled. At times a fang is left in the flesh, but this does not trouble the serpent's powers as a poisoner, since numberless teeth lie ready to become firmly fixed in its place, and both fangs are never lost together. The nervous mechanism which controls the act of striking seems to be in the spinal cord, for if we cut off a snake's head and then pinch its tail, the stump of the neck returns and with some accuracy hits the hand of the experimenter—if he has the nerve to hold on. Few men have. I have not. A little Irishman who took care of my laboratory astonished me by coolly sustaining this test. He did it by closing his eyes, and so shutting out for a moment the too suggestive view of the returning stump.

When a man or an animal is bitten by a rattlesnake death may take place in a few minutes. It has followed in man within a minute, but unless the dose given be enormous, or by chance enters a vein, this is very unlikely. The bite is, however, popularly believed to be mortal, and therefore every case of recovery gives credit to some remedy, for it is a maxim with physicians that the incurable and the easily relieved maladies are those which have most remedies assigned to them.

Usually the animal struck gives a cry, and very soon becomes dull and languid. The heart, at first enfeebled, soon recovers, the respirations become slower and weaker and more weak, paralysis seizes the hind legs, the chest becomes motionless and at last death follows, usually without convulsions. Observe how little this tells us. Mere outward observation gives up but slight explanatory help. If the animal should chace to survive over a half hour, the part bitten swells, darkens, and within a few hours the whole limb may be soaked to the bone with blood, which has somehow gotten out of the vessels and remained fluid in place of clotting. What is at first local by and by becomes general, and soon the blood everywhere ceases to have power to coagulate. Then leakages of the vital fluid occur from the gums or into the walls of the heart, the lungs, brain, and intestines, and give rise to a puzzling variety of symptoms, according to the nature of the organ thus disor-

dered. These phenomena make the second stage of poisoning, and with them there is, in finally fatal cases, a continuous and increasing damage to the nerve centres that keep us alive by energizing the muscles which move the chest walls and so give rise to the filling and emptying of the lungs.

If we mix any venom with a strong enough solution of potassa or soda we destroy its power to kill. A solution of iodine or perchloride of iron has a like but a lesser capacity, and so also has bromohydric acid; but by far the best of all, as was first shown by Lacerda, is permanganate of potash. If this agent be injected at once or soon through a hollow needle into the fang wound, wherever it touches the venom it destroys it. It also acts in like destructive fashion on the tissues, but, relatively speaking, this is a small matter. If at once we can cut off the circulation by a ligature and thus delay absorption, and then use permanganate freely, we certainly lessen the chances of death; yet, as the bites occur usually when men are far from each help, it is but too often a futile aid, although it has certainly saved many lives. The first effect of venom is to lessen suddenly the pressure under which the blood is kept while in the vessels. Death from this cause must be rare, as it is active for so short a time. Any alcoholic stimulus would at this period be useful; but, despite the popular creed, it is now pretty sure that many men have been killed by the alcohol given to relieve them from the effects of snake bite and it is a matter of record that men dead drunk with whisky and then bitten have died of the bite. For the consequences to the blood and to the nerve centres which follow an injection of venom there is, so far as I am aware, no antidote; but as to this I do not at all despair, and see clearly that our way to find relief is not by stupid trials of this sort and that, but by competently learning what we have to do. Moreover, we are in a position at present to say what not to do and there is a large measure of gain in being able to dismiss to the limbo of the useless a host of so-called antidotes.

I am often asked what I would do if bitten while far from help. If the wound be at the tip of the finger, I should like to get rid of the part by some such prompt auto-surgical means as a knife or a possible hot iron affords. Failing these, or while seeking help, it is wise to quarantine the poison by two ligatures drawn tight enough to stop all circulation. The heart weakness is made worse by emotion, and at this time a man may need stimulus to enable him to walk home. As soon as possible some one should thoroughly infiltrate the seat of the bite with permanganate or other of the agents above mentioned. By working and kneading the tissues the venom and the antidote may be made to come into

HEADQUARTERS

A Complete Hunting Outfit.

Orders by mail will receive prompt attention.

J. B. REED, SUNBURY, PA.

contact, and the former be so far destroyed. At this time it becomes needful to relax the ligatures to escape gangrene. This relaxation of course lets some venom into the blood-round, but in a few moments it is possible again to tighten the ligatures, and again to inject the local antidote. If the dose of venom be large and the distance from help great, except the knife or canterly little is to be done that is of value. But it is well to bear in mind that in this country a bite in the extremities rarely causes death. I have known of nine dogs having been bitten by as many snakes and of these dogs but two died. In India there would have been probably nine dead dogs.

MANHOOD

How Lost, How Restored!

Just published, a new edition of
Dr. Culverwell's Celebrated Essay
 on the radical cure of Spermatorrhoea or incapacity induced by excess or early indiscretion.

The celebrated author, in this admirable essay, clearly demonstrates from a thirty years' successful practice, that the alarming consequences of error may be readily cured; pointing out a mode of cure at once simple, certain and effectual, by means of which every sufferer, no matter what his condition may be, may cure himself cheaply, privately and radically.

This lecture should be in the hands of every youth and every man in the land.

Sent under seal, in a plain envelope, to any address, post-paid, on receipt of four cents or two postage stamps.

Sample of medicine free.

THE CULVERWELL MEDICAL CO.,
 41 Ann St., New York, N. Y. Post Office Box 45.
