### How to Guess a Woman's Age.

A volume of memoirs has just been published giving the experiences of a French President of Assizes. It bears curious testimony to the inaccuracy of women on the subject of their own ages. As the writer's information is from the calender, he speaks only of the criminal classes. The only instances in which he finds correct dates given by women are when they are under twenty-five or over eighty five. At these periods of life, he says, they are to be trusted.

At all other periods the sure controlling tendency is to understate. The magia trate has been able to give a rule for guidance. He finds that female prisoners invariably state their ages as twentynine, thirty-nine, forty-nine or fifty-nine and from this remarkable circumstance he deduces his rule. If their ages are in the forties, they bodily set them down in the thirties, but conscience asserting itself, they keep as near the truth as they can and fix them at thirty-nine. Whether male criminals do the same the magistrate does not state. - London News.
