Letter to J. F. Stetler, MIDDLEBURGH, PA.

Dear Sir: When you build a house you want a good paint next the woodit goes a long way in taking care of the wood. The paint that has the best chance to be useful is this first coat: first two coats: first three coats. The first takes care of the 2st; the third it of John W. Runkle and takes care of the two. All three become one; and that one is to last forever. "Forever" means as long as the house lasts. The way to make the first painting last, as long as the house, is to follow it up with repainting often enough.

How often? Depends on the paint. Repaint while the paint is still waterproof. All the wear is outside; there is no wear on the under paint. This is how the first painting last forever: by keeping it covered : keeping it sound. And this is the cheapest way to take care of a house. But how often to paint depends on your paint. If you paint lead and oil, paint again in three years or less; if Devoe lead and Zinc, paint again in three years or more.

That "less" and "more" are about as one to two. Devoe lead and zine takes care of a house at half cost, because it lasts twice as long as lead and

If the sun shines and he sees his shadow he will go back and we will have six weeks more of cold weather. The day was cloudy all day, but for a few minutes the sun shone brightly, so we may expect six weeks more of cold weather. If he had not seen his shadow, we should expect an early spring.
