

SPELLING CONTEST.

In connection with the Boys' Club and Girls' League Contest, we have planned for a Spelling Contest, to be held in Somerset on Monday, November 24th 1913, at 4 p. m. All pupils in the county are eligible to enter the contest. The aim of this contest is to encourage the boys and girls in our public schools to become better spellers. To be a good speller is an accomplishment worthy of the earnest attention of every one. A list of twelve hundred practical words has been selected from the spelling books in use in this county. These words will be published in the county papers in installments of 200 words each week. From this list 100 words will be selected and pronounced to all of the applicants. Each applicant will write the words and submit the manuscript to the committee for correction. In case of tie winners the contest will be decided by oral spelling. The first prize is \$5.00, second \$4.00, third, \$3.00, fourth, \$2.00, fifth, \$1.00.

Electricity Safest and Best.

There are six fundamental reasons why electricity is the best form of energy for light, heat and power in the home. It is safer, more economical, easier to control, more adaptable to all conditions, less wasteful and more healthful.

Electricity is the safest for light. The lamps cannot be "upset," they cannot explode, they cannot set fire to curtains and wall paper. There are no sparks. No matches are required, there is no open flame, no noxious and dangerous gases. Electricity lights the home without destroying the air. This is of vital importance in the winter time when the windows and doors are closed. Lamps that destroy the oxygen in air are unhealthful.

Electricity cannot be adulterated. The meter measures the energy exactly. Should you fail to get good light, or full voltage, the meter will not charge you for this lack of light.

In architecture, in adaptability, there is no comparison of electricity with other forms of illumination. It will meet any situation, anywhere, at any time.

Heating by electricity is more expensive than by gas or coal, when mere energy is measured. But the heat can be applied at any given degree, wherever and whenever it is wanted. And then the expense can be instantly stopped.

No other form of service can equal electricity. Hence, no other plan of heat, light and power can be conscientiously compared in price with that of electricity.
