and must be saved, so by degrees the hopper has come to be used univer-sally. The usual materials are fed in it, but mixed in bulk and put into hoppers dry in sufficient quantities to last several days. There are some who object to hoppers, fearing they attract rats, mice, sparrows, etc., and that fowls eat less freely of dry mash and consequently do not lay as well. The first of these objections is overcome by using metal hoppers with lids. These may be purchased from any poultry supply house. The second objection is true, but the slight loss of eggs is off-set by saving in the time spent in feed-ing. Aug. 25.—Eleanor, Susan and De-Sales Shaffer and Harry Castin near Deal, spent Sunday with friends and relatives here last Sunday. Mrs. Laura Reitz of Shanksville,

where feeding is done by a hired man, who is apt to be careless in keeping feed troughs clean and well scalded or allowing the mash to stand until sour, upsetting the digestion of entire flocks and causing loss in the egg yield, the change to the hopper meth-od will prove beneficial. For those who think of changing from the old to the new method per-haps a few of the dry mash mixtures used by successful poultry breeders may prove helpful. A well tried one consists of coarse wheat bran, 200 pounds; cornmeal, 100 pounds; ground There will be a picnic held at the Wellersburg grove, Saturday, August 29th. All are invited to come and have a good time.

within fourteen of fifteen generations, that the present race horse of England and North America cannot possess one-sitteen-thousandth part of any other blood than that of the desert." It is a long time since the horses Messenger, Diomed, Mambrino, Jus-tin Morgan, Bashew, Spark, Selina, Blaze, Fearnaught, Traveler and Ethan Allen lived, yet our best stock traces back to them. Without Justin Morgan there would be no Morgan horse. Jus-tin Morgan was rich in Arab blood. Messengor and Diomed were of liko parentage. The beautiful coach horses known as the Hackney trace their lineage to the Arabian breed. At Forc Collins, Colo., where the department of agriculture is now trying to perfect a new type of carriage horse there is at the head of that stud Carmon, who carries in his veins the blood of the Arab. The grace and beauty of the powerful and massive Percheron are due to the Arab lineage which has re-moved that coarseness which horse.

CULLING UNPROFITABLE SOWS

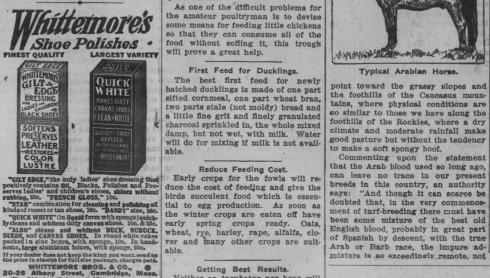

Cost of Pigs Determined by Size of Litter—Very Prolific Animal May Raise Ten.

If a sow raises but three pigs, says Professor Smith of Purdue university, it means that they are costing five dollars each. If instead of three she dolars each. If instead of three she raises five, the initial cost is reduced to three dollars per head. If she is a very prolific sow she may raise ten, in which case the debt represented by make size a sub size of the state of the second size of the second s

in which case the debt represented by each pig is only \$1.50. When the breeder heartlessly culls out his sows that produce stock that never attain good size; when he promptly sends to the block the sow with small litters; when he gets out of his herd the peevish hogs and the hogs of low vitality, then he will hear less about the relative advantage of the crease herd hog

ARABIAN BLOOD IN HORSES

Claimed Greatest Perfection in Ani-mais Cannot Be Attained Uniess Conditions Are Favorable.

(By F. KNORR.) By some authorities it is claimed that the hardiness of Arabian horses may be attributed to the fact that they were bred and reared for thousands of years under the most adverse oon-ditions. Other writers claim, and justly too, that only the best environ-ment can bring out the best qualities in man and beast—that the greatest perfection in animals cannot be at-
