Russians Deny Austrian Victories Reported From Berlin and Vienna.

Petrograd, Russia.—An official com-munication issued in reply to state-ments of Berlin and Vienna semi-official news agencies that the Austrians were victorious over the Russians in the districts of Zamosc and Tyschowszy, says:

'The Russian official agency is au "The Russian official agency is au-thorized to declare that the Russian troops, who, since August 21, have maintained an incessant offensive against the enemy in the district be-tween the Vistula and Bug rivers, completely defeated on August 28 the Fifteenth Austrian division, and that up to Seatember 4 continuing their rough mining towns that have been so realistically described by Bret bling, no horse stealing, no lynching The only objection to the town-so said Miss Virginia Keating-was that up to September 4, continuing their operation in that direction, had cap-tured three flags, 23 guns, 12 machine guns, two aeroplanes, 150 officers and 12,000 soldiers.

F you have something that is L intended for your eyes only, put it in one of our Safe Deposit Boxes

Fire cannot reach it—burglars cannot get it and you will have absolute privacy because all our Safe Deposit Box are fitted with Yale Locks which cannot be opend unless you help. These locks have double mechanisme that requires two different keys to unlock. You have one key and we hold the other-and both must in used at the same time or the box cannot be opened.

Quality Kept Up.

DRINK MUCH IN HOT WEATHER

Plentiful Supply of Cool Water is Im-perative to Maintain Normal State of Health.

State of Health. In hot weather you notice that you are constantly thirsty. Often you feel that you simply can't get enough to drink. You needn't worry about the feeling. It merely means that the ma-chine of your body is working nor-maily.

This mechanism is driven by a heat value just the same as coal. Its com-bustion keeps the heat of the body day and night at about 98 2-5 degrees. Temperatures in the neighborhood of 100 degrees put something of a strain on the mechanism regulating the heat of the body, for then the body must be cooled below the temperature of the surrounding air. This is done by the surrounding air. This is done by

the sweating process. Evaporation keeps the temperature down. It can be worked out as a problem in physics that the food eaten in a day by a workman with an average appetite would produce enough heat to propertie about eig quarks of water at the day was faily down on here.

trous look she gare him, came out station not far beyond the river, we telegraphed for information. The news came that the robbers had mounted horses and galloped away. It was some time, however, before we re-celved an order to back across and, when we did, found that no lives had been lost, though the robbers had got considerable plunder from the passen-gers. Jack McCurdy set an example by hugging me, and pretty much every one present followed it. I was sent for by the president of the road and asked what I wanted as a reward for my feat. I said I wanted preferement for jack McCurdy. The president smiled at this and said, "I think I can take care of both of you."

Cardiff, Wales.—It is reported here that the Hon. Archer Windser Clive, second son of the Earl of Pirmouth, who is a lieutenant in the Coldstream Guards, was seriously wounded in the fighting at Mons.

appetite would produce enough heat to evaporate about six quarts of water at the temperature of the body. An Eng-lish medical officer stationed in India, where the temperature for months at a time does not fall below 100, reports that a dally consumption of about six quarts of water was required for a quarts of water was required for a person taking a considerable amount of exercise.

It is necessary to drink plenty of It is necessary to drink plenty of water to supply the body with enough material for evaporation to keep cool. Incidentally it may be noted that hot weather, even in India, isn't neces-sarily healthful. This same medical officer, Dr. E. H. Hunt, who is connect-ed with the railway service, reports he has never come across a case of superscriptions in a nerson known to be unstroke in a person known to be healthy. If a man were slightly ill, however, then the heat might make trouble if he over-exerted himself.

"You'll have to keep quiet for six weeks," said the doctor solemnly. "Six weeks!" echoed the active politician. "I thought you were a physician."

"I am." "Then what I want from you is a prescription, not a penance."-Washington Star.

## Origin of the Use of Lime.

The use of lime as binding material for mortar originated in the remote past. It is probable that some sav-ages when using limestone rocks to confine their fire noticed that the stones were changed by the action of the heat. A passing shower may have slaked the lime to a paste, and they discovered that the paste was smooth and sticky and was a better material than clay to fill the crevices in their crude dwellings. From this discovery it was but a step to add sand to the paste in order to produce a mortar.

"I have been somewhat costive but Doan,s Regulets give just the results I desire. They act mildly and regulate the bowels perfectly, '-Gov. B. Krause, Altoona, Pa. ad
