How he discovered that Attorney Harvey M. Berkeley issued bogus stock certificates while acting as secretary and treasurer of the Somerset Telephone company was narrated at the equity hearing before Judge Singleton Bell, of Clearfield county, last "Then what in thunder's she holler-week, by Charles E. Specht, of Johns-in' for?" gleton Bell, of Clearfield county, last

first discovered a discrepancy in the

a \$5,000 loan from Specht. The deal was closed about 3:30 o'clock in the afternoon. Berkeley gave Specht a note for the amount of the loan, furnishing collateral security in the form least with the face of a demonstrated reduction to the wrote his. The third examined the other two lines and at length wrote his. The fourth contemplated the three contained in a professional paper. Bulletin 245 of the United States Department of Aericalture. shares of the capital stock of the wrote his line. The townspeople were telephone company. The certificate considerably surprised when was dated June 18, 1911, which fell saw the headstone. The verse read: on Sunday and this certificate is included with four others the validity of which is attacked because they are dated Sunday

After giving Berkeley a check for \$5,000, drawn on the First National Bank of Johnstown, Specht consulted E. D. Schade, of Johnstown, general manager of the Somerset and Johnstown Telephone companies. Schade it seems, produced a certificate held Ira G. Carver; Glade, Helen Speche by himself, numbered 276, calling for 57 shares, and dated July 15, 1912. Specht, at once noticed that, although Schade's certificate was dated over a year later it bore a smaller serial number than his own Attorney Field. number than his own. Attorney Fred W. Biesecker, of Somerset, president transaction and immediately declared of the Somerset Company, was advis- the certificate bogus as Berkeley did ed of the discrepancy and the entire not own such a large amount of stock. and alive evcept this one. POWDERED HELLEBORE TO

PREVENT FLIES BREEDING. A safe and effective weapon against the typhoid or house fly has been found in powdered hellebore by sci entists of the Department of Agricul ture. Flies lay their eggs chiefly in stable manure. Powdered hellebore mixed with water and sprinkled over the manure will destroy the larvae which are hatched from the eggs. Since powdeed hellebore is readily obtainable this puts in the hands of everyone a remedy for one of the pests that has been found dangerous as well as troublesome. Powdered hellebore, however, will not kill adult flies which must be swatted or

It has long been known that flies For he is always good for another try. breed in manure but previous methods of destroying the larvae there by the use of strong chemicals have been open to the objection that the treatment under some conditions lessened the fertilizing value of the manure or actually injured vegetation. This is not true of powdered hellebore. Government experiments have shown that the hellebore is entirely decomposed in the course of the fermentation of the manure and even in excessive quantities it does no harm except to the larvae it is intended to destroy Chickens picking in manure treated

ountry to stop the war.

An official declaraion is published If he'll off with his coat and pitch is sufficient to kill the larvae in 8 bushels or ten cubic feet of manure. is sufficient to kill the larvae in 8 The mixture should be sprinkled carefully over the pile , especial at tention being paid to the outer edges. In most places hellebore is obtainable in 100-lbs lots at the cost of 11cts a pound. This makes the cost of the treatment a little less than one-sev-enteenth of one cent per bushel of manure. A free estimate of the output of manure is two bushels a day per horse. The money therefore involved therefore very trifling in comparison with the benefits to the individual and the community from the practical elimination of the disease-spreading fly.

> Although fresh manure is the fav-"Learn it Ma'am?" asked the man orite breeding spot, flies lay their eggs in other places as well, such as outhouses, refuse piles etc. In these places from which no manure is tak-en to spread on the fields, considerable saving may be effected through the substitution of borax for powder er hellebore. Applied at the rate of 0.62 pounds per eight bushels of ma nure, borax is as effective as powdered hellebore in killing the larvae, but costs less than one-half cent for bushel of of manure treated. In larger quantities, however or when the ma nure itself is spread at a greater rate than 15 tons to the acre, some damage to crops may result. Large quan tities of manure are used by market gardeners and others and there is always danger of carelessness in applying borax. The use of the more expensive and safer hellebore is therefore recommended for the treatment of manure. Borax is recommended for all other refuse in which flies may

Scientists who have been working for years to eliminate the fly are convinced that the use of one or the other of these simple measures is a pub-lic duty wherever manure and refuse exists. Sanitarians, however, strongly advise the removal of refuse or other unnecessary rubbsh or breeding places for flies. In breeding placwhich cannot thus be disposed of such as manure or stables, the daily use of powdered hellebore will keep the flies from breeding in these favorite breeding grounds. The best results are obtainable in a community where everyone cleans up his preminumbering of the company's stock cer- and his fellow townsmen thought he ses, traps or kills the files and sys-

DAYBREAK.

If you would behold the break of the day arise e'er the night has departed and go forth in the early hour to gaze upon the firmament. The moon from her royal height in the zenith beam down upon the peaceful earth. The air filled with the balm of the morning and the silvery mist tells us that the day is approaching. The moon turns slightly pale as the first soft light of the invisible sun appears over the eastern crest. Steadily it grows brighter until its rays stream out over the vales of fog and diffuse the moonlight splendor into the dawn of day. The night has dissolved so silently that its departure was scarce ly pero have hidden and the moon has lost

Is Your Kitchen A Living Furnace?

Madam, there's absolutely no reason why it should be. You don't have to put up with this another minute. Instead of roasting yourself to death over a stove that sheds heat like the sun at high noon in August, get an oil stove that sends the heat right to the vessels you want heated and not all over the kitchen. Go today and buy a

PERFECTION OIL COOK STOVE

and you're buying cooking comfort and economy. You cut out that "tired feeling" caused by the ash pan, the coal scuttle and wood splitting, and that's a relief to any woman who has two or three meals to prepare every day. You get a stove that is ready for instant use because it lights like gas and regulates like gas and, with the separate oven and fireless cooker, is equal to a gas stove in cooking power. You can broil, bake, fry, roast, boil, heat water for wash day and irons for ironing day. And you're saving money every minute it's not in use.

Just stop in at your local dealer's and ask him to show you the New Perfection Oil Cook Stove and see the perfected oil reservoir, the regulated flame control, the combustion chimneys that prevent smoke and smell and the improved wick that outlasts the ordinary kind. You'll be surprised to learn how decidedly safe, sane, saving and satisfying this cook stove really is.
