

A STUDY of the above map prepared by the State Department of Health shows a close relationship between the distribution of infantile paralysis in Pennsylvania and the direct lines of travel between this State and New York City, where the epidemic has reached large proportions. It is evident that those sections of the State which are in close contact through the intercourse of travel have by far the largest number of cases. This demonstrates the necessity for the quarantine which has been ordered to protect the children of the Commonwealth from the unfortunate fate of thousands in neighboring States.

Commissioner of Health Samuel G. Dixon has asked the help of all thinking people in making this quarantine effective.
