> Antiquity of Playing Cards. The game of cards was first played in the east and seems to have had a military origin. Cards were introduced from Asia into Europe at the time of the crusades and were first used by necromancers to foretell fortunes. They soon became a popular amusement in the south of Europe, where the Saracens and Moors taught the people how to use them, and card playing spread to all parts of the continent. The state records of Germany mention the fact that Rudolph I., in 1275, was fond of the game and played with his court-

After the invention of paper the manufacture of cards became extensive, but declined somewhat when card playing was forbidden by several of the German states and by the English government on account of the supposed immoral tendency. Before the era of paper cards in the orient were made of ivory, papyrus and canvas, less frequently of the precious metals and quite commonly of wood.

ed. This storm wave advances with

During a spell of particularly hot weather a well known baronet came ecross three workmen engaged on a job on his estate. One of them remarked, as workmen not infrequently do, on the dryness of the job. The heat had perhaps extended itself to the baronet's temper. At any rate, he turned away, with the reply: "If you are thirsty, you know where the well is. You will find a pail there."

Thinking over his remark a little later, it flashed across the baronet's mind that he had given orders for three bottles of champagne to be put into the pail and lowered into the well to cool for dinner. He hastened to the well and discovered - three empty bottles! What he said this time is not reported. -London Truth.

Lemurs For the Zoo.

The national zoo has just received through an animal dealer in Philadelphia a magnificent pair of the large black and white lemurs indigenous to the island of Madagascar. This makes the fourth pair of these animals brought to this country, and, in addition to being highly attractive by reason of their coat of long jet black and snow white hair and their abnormally large and luminous eyes, they are of very great interest from the viewpoint of science and evolution.

The lemur stands in the same relation to apes and monkeys as they in turn stand to the human race, only in the case of the lemurs and apes the
